

# Everyday Dynamo: Automating Simple Solutions That Bridge Workflow Gaps Within Revit

Josh Moore

Design Applications Manager, Perkins+Will  
@joshmoore2911

Justin Benjamin

Design Applications Manager, Perkins+Will  
@jbenjamin1930

# Class summary

- Use **visual programming** in the Dynamo extension to bridge everyday workflow gaps within Revit software.
- **Brief overview of Dynamo** and the many available packages that the Dynamo community has already created that can be used to automate many tasks.
- **Specific examples** that bridge workflow gaps and/or increase automation within Revit software.
- **Tips and tricks** you can use when setting up Dynamo, and we'll go over basic troubleshooting tips.

# Key learning objectives

- Have Increased awareness and familiarity with Dynamo visual programming nodes and packages
- Learn some tips and tricks when working with Dynamo and troubleshooting techniques on scripts that fail
- Recognize when Dynamo can save you valuable time on projects
- Discover simple and innovative ways to bridge workflow gaps in Revit

# Ever feel like this?

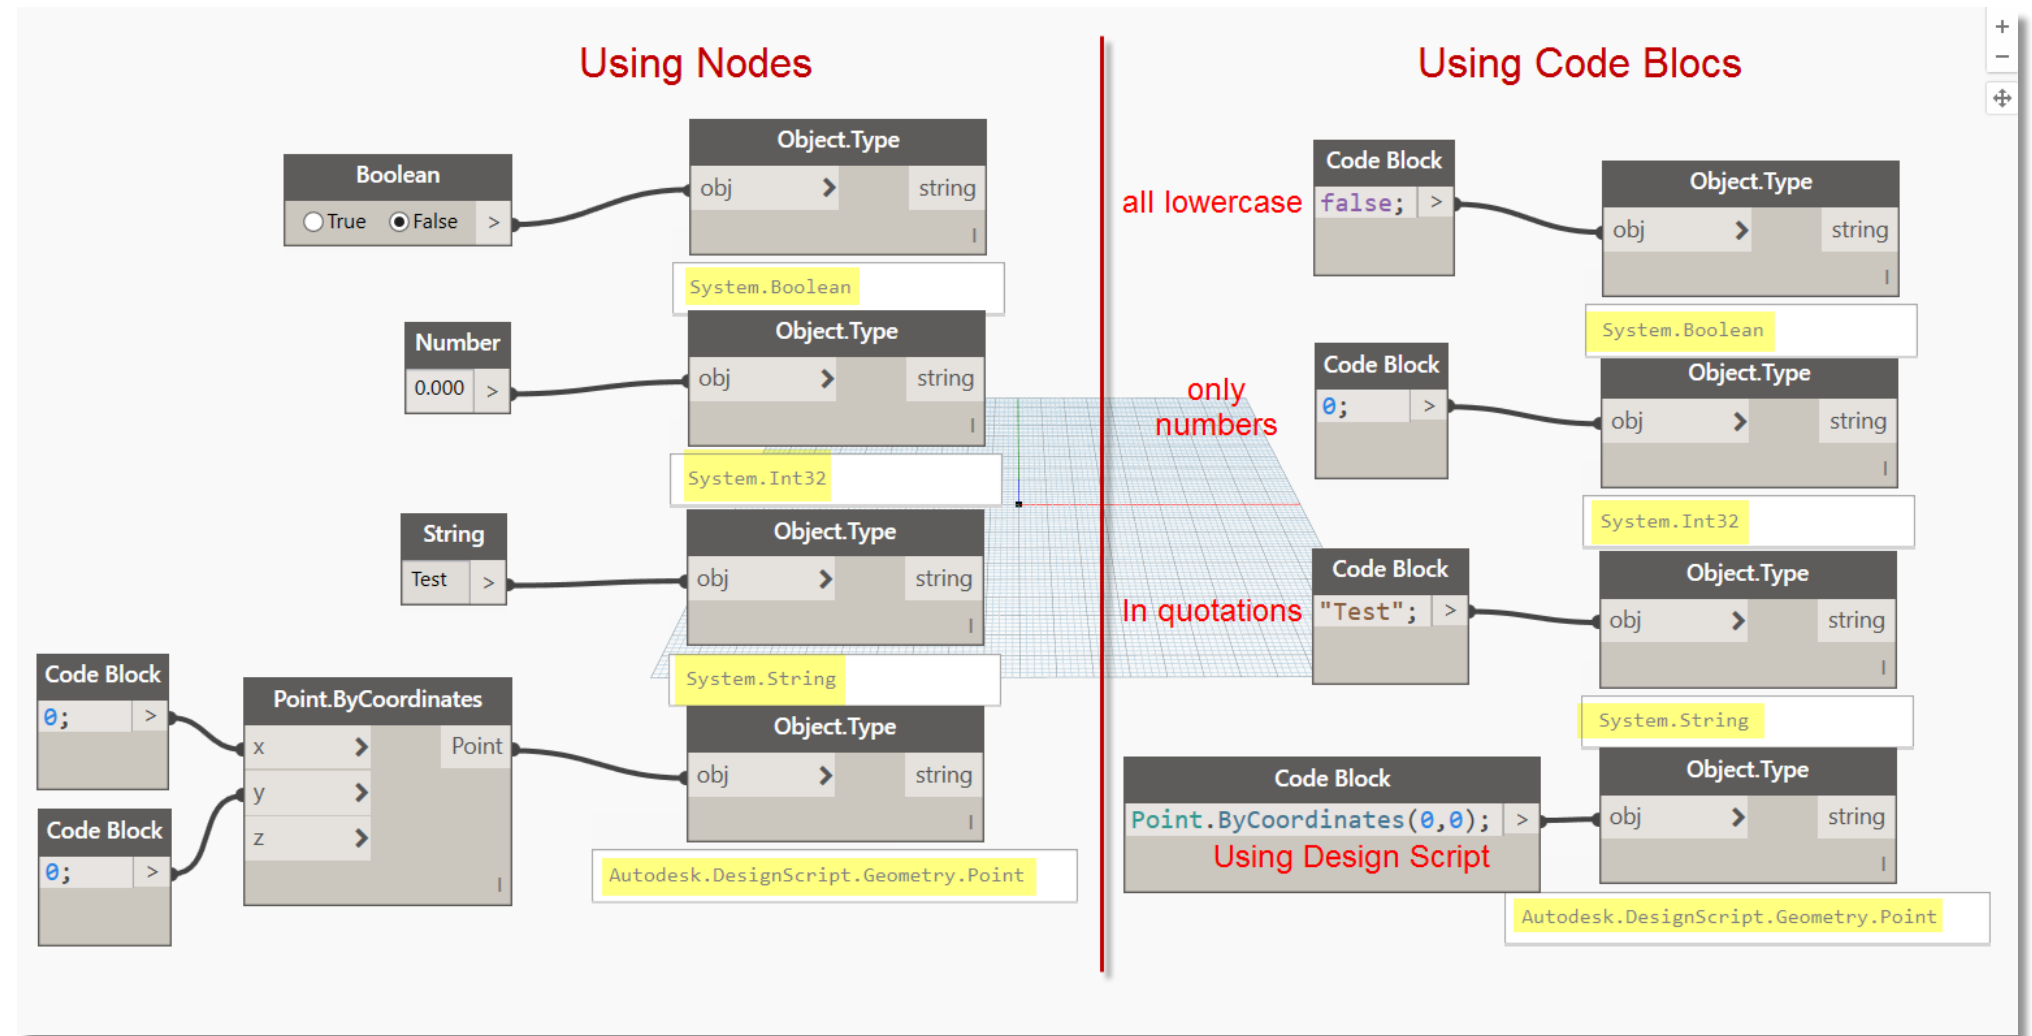

**we don't have time to change the wheels, push harder Harry**

# Core Dynamo

# Data

## Type Basics

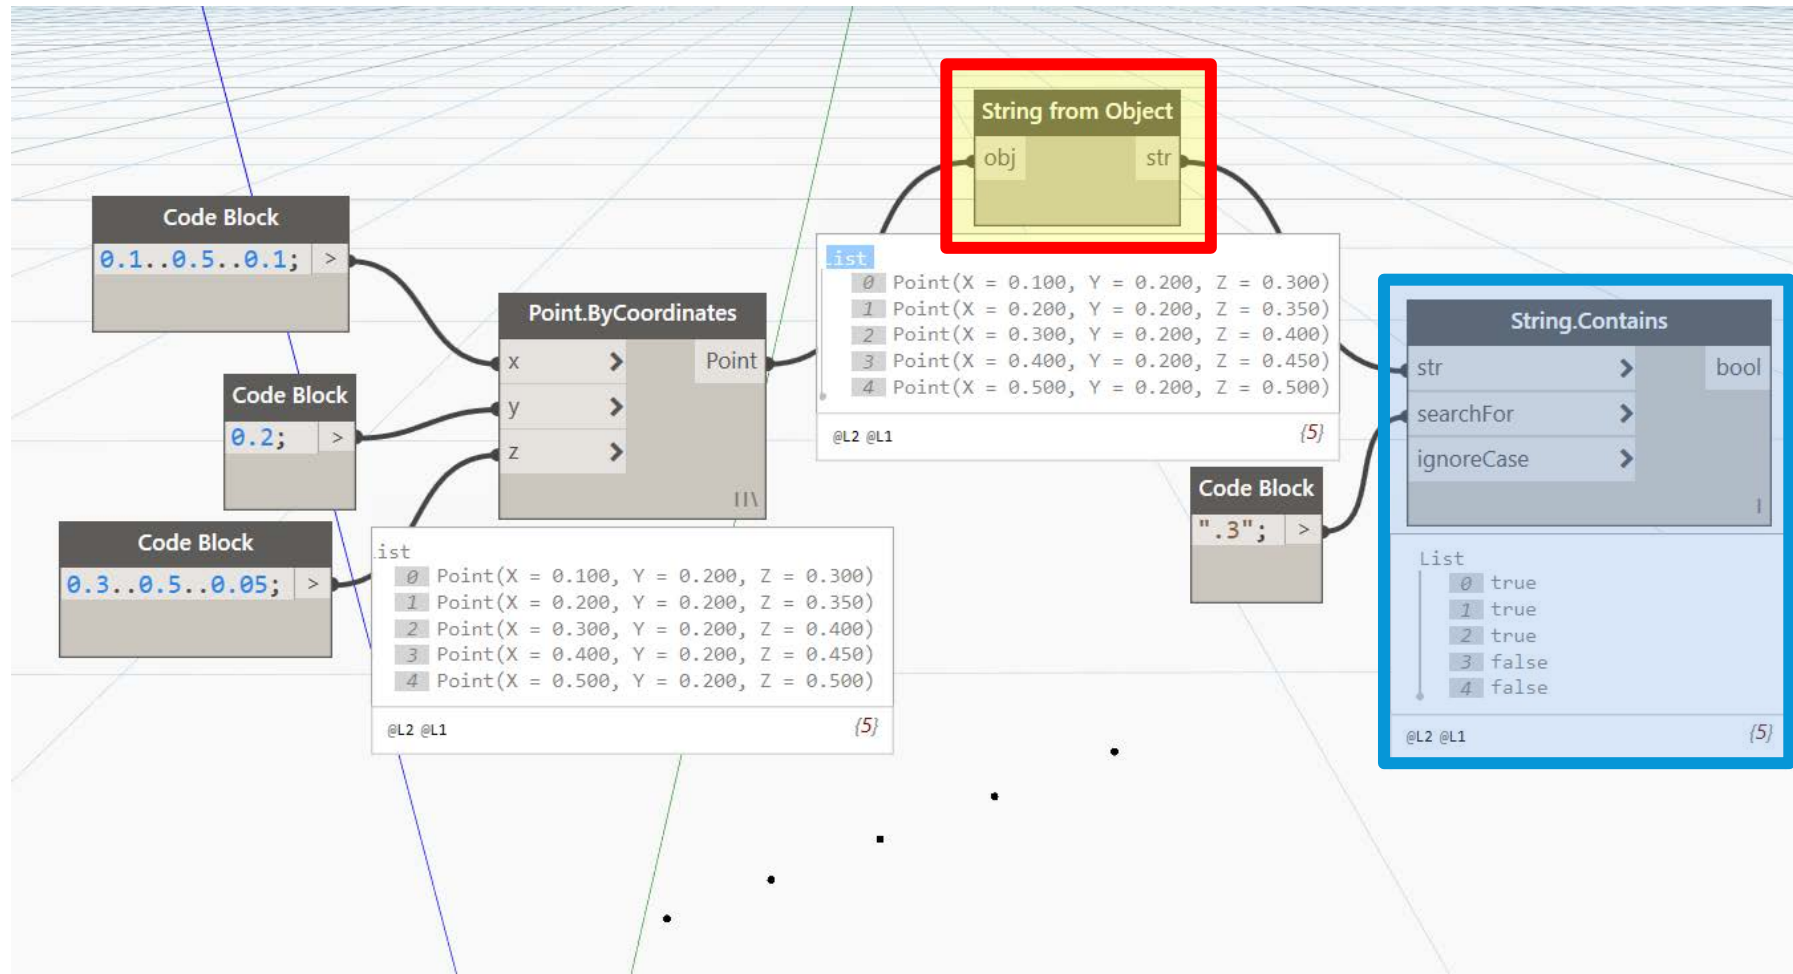

- String
- Number
- Integer
- Boolean
- Nulls
- Lists
- Geometry

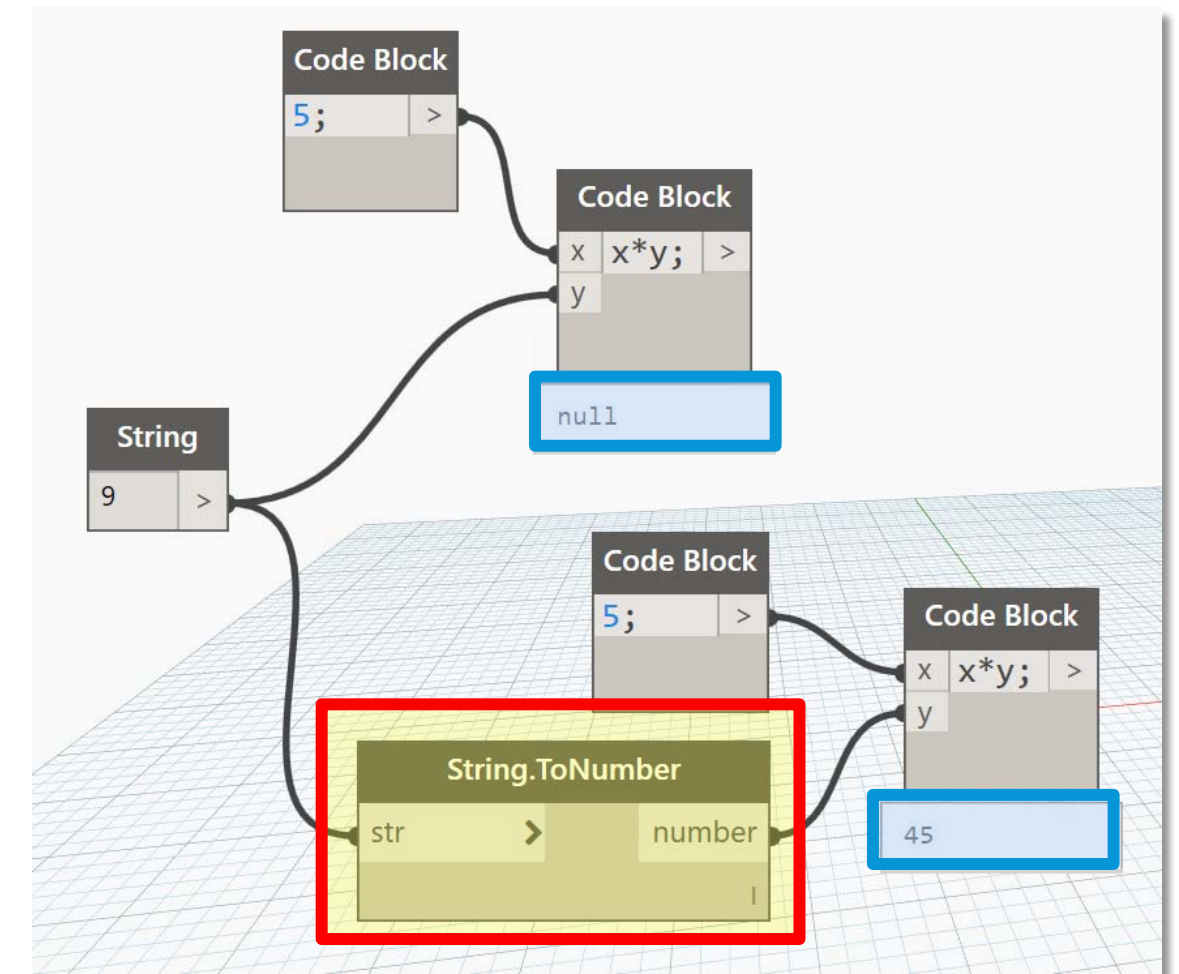

# Data

## Converting Types

Convert Point to String for Search

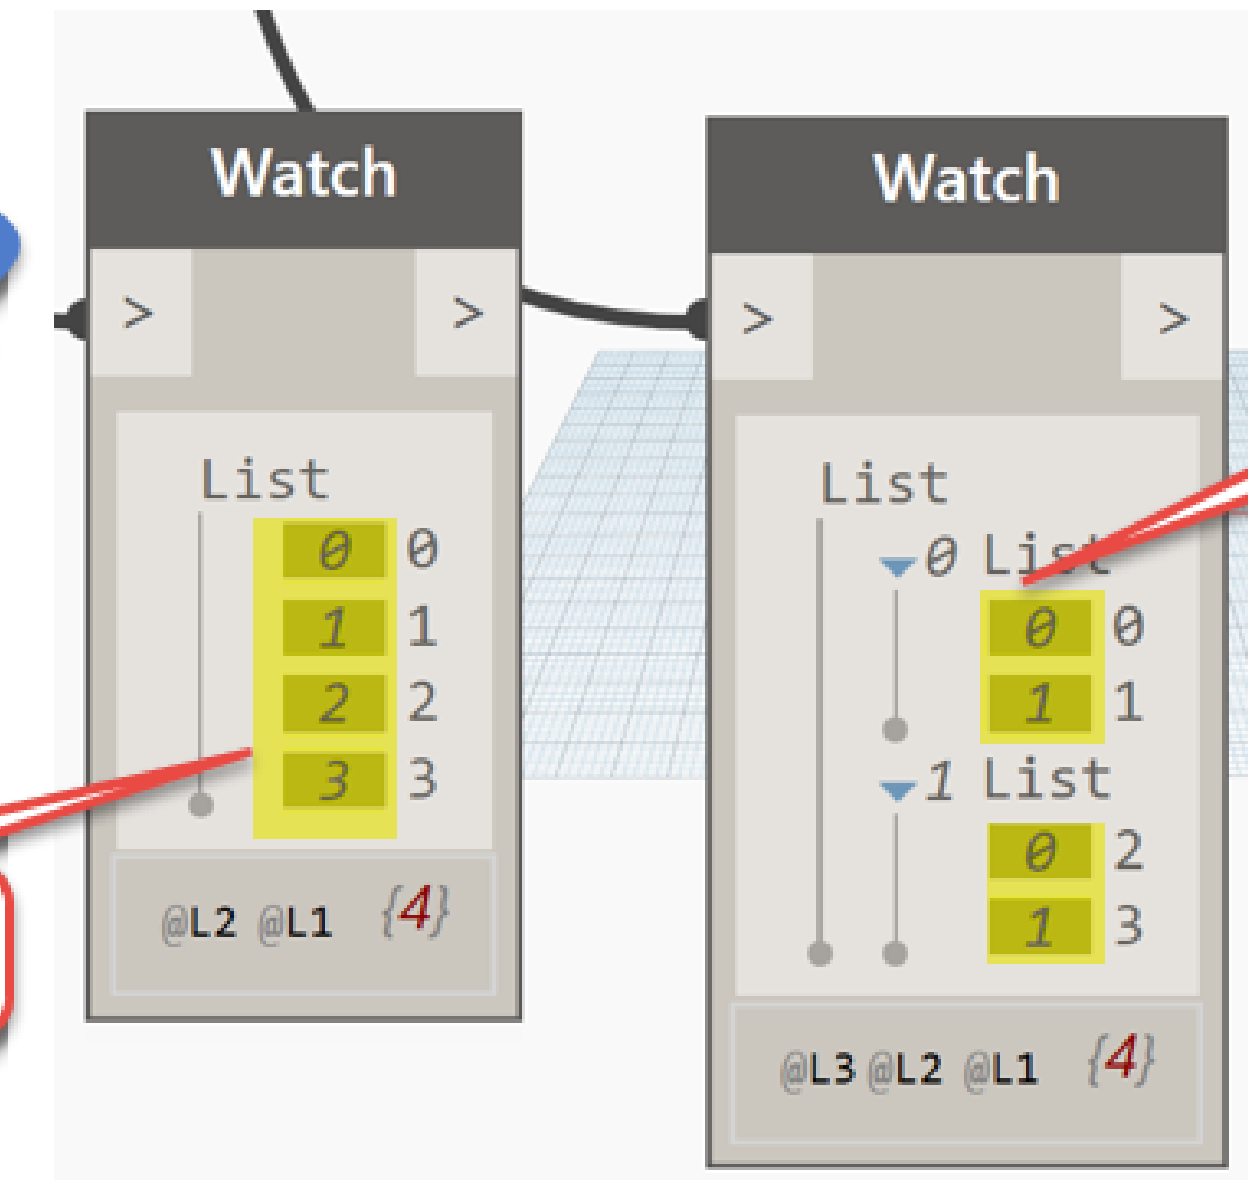

Convert a String to a Number for Data Match

# Managing Data Structure

The same data sorted in two different ways...

Data sorted as a single List.

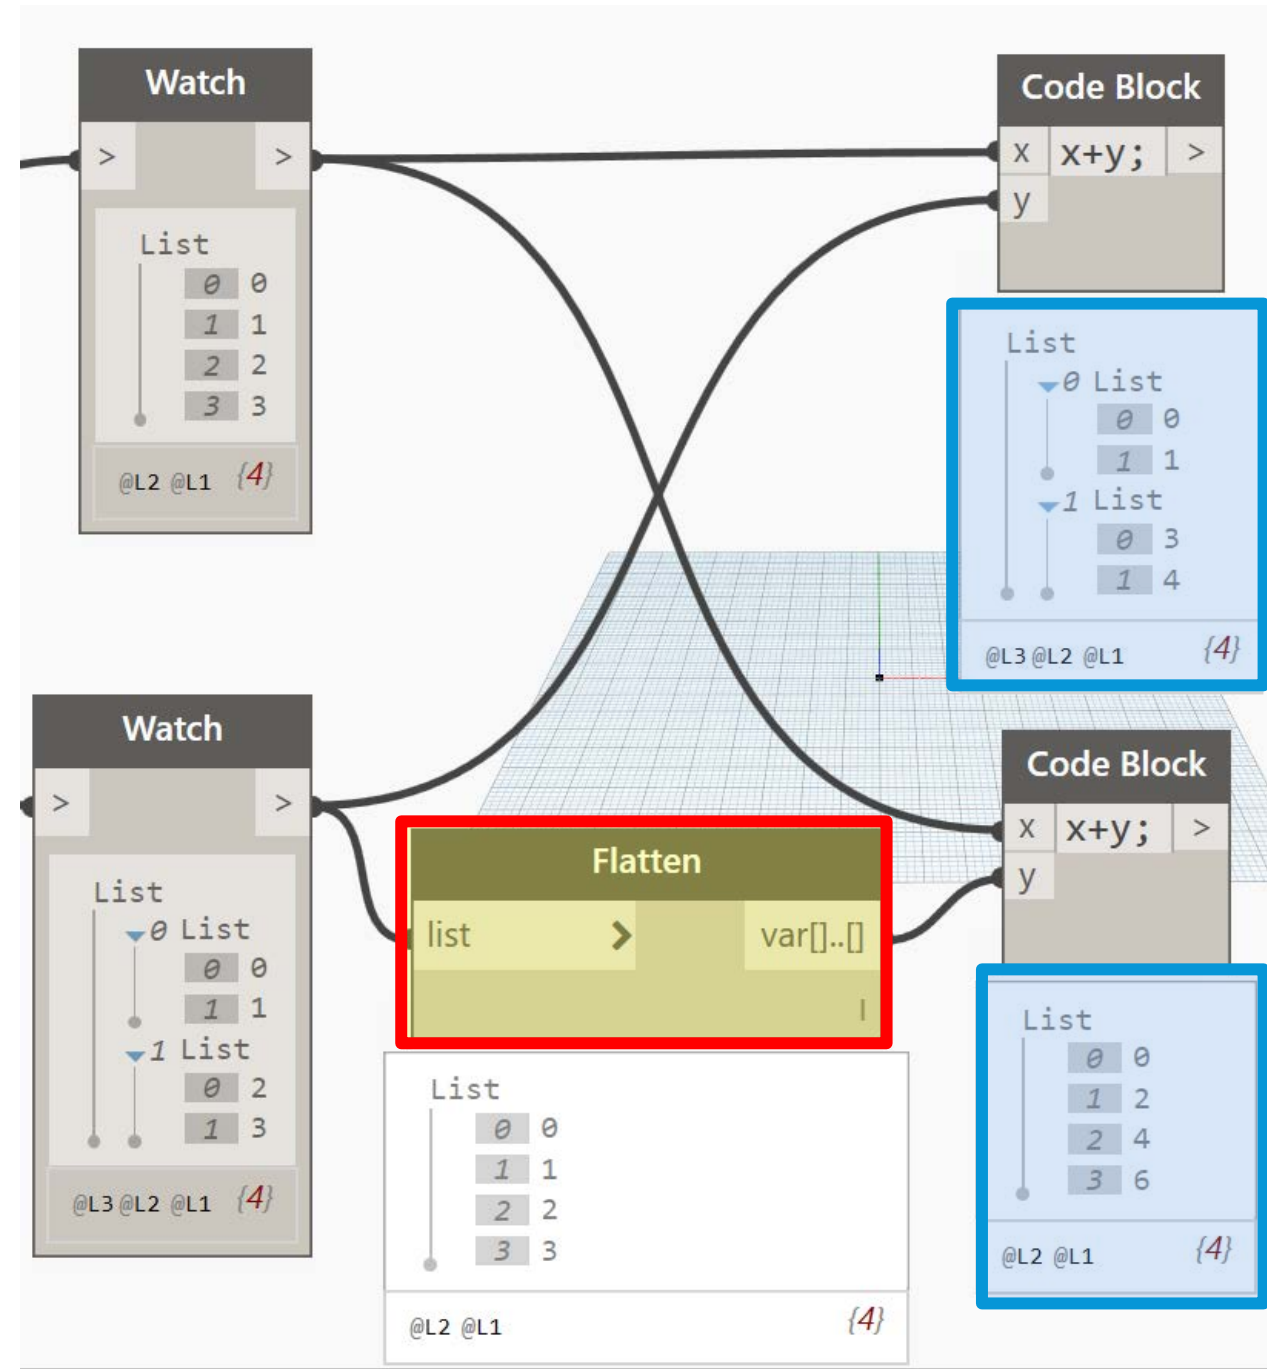

Data sorted as a List of Lists.

# Managing Data

## Calculation Variations

Structure Variations

# Process Automation Examples

## When might one use Dynamo?

- Keyplan Setter
- Place Face Hosted Light Based on Ceiling Hosted Light
- Replace Carriage Returns in Room names
- Push Object Level to Parameter Value
- Transferring a project from one file to another
- Add dots to sheet index based on revision clouds placed on sheets
- Align Views on Sheets from Template Sheet Series
- Create Curtain Wall Systems based on Design Criteria
- Create Finish Floor objects from a Room Object and it's properties

# Slab Edit Floor to Match Topography

## User Interface – Point Resolution and Select

### USER INTERFACE

INPUT + CONTROL

Effectively, you are adding points to an existing floors to match the contours of a topo surface

#### Point Resolution Settings

Number of Divisions for Field Spacing  
20;

Edge Point Spacing (inches)  
12;

Offset above Topo (for curbs, etc)  
Offset (in inches)  
0;

CREATED BY: Josh Moore  
CREATED: 2016-09-28

VERSION 1.1.0  
LAST EDITED: 2016-09-28

DYNAMO VERSION: Dynamo 1.1

PACKAGES:  
Clockwork, Springs

NOTES:  
This script is made to adjust a floor object in Revit to match a topo surface. It current works with one object at a time.

Does not work on a topo that has been subregioned. Sharp corners can fail the U/V division.

DYNAMO GRAPHIC STANDARD  
CREATED BY: VLADIMIR ONDEJCIK  
WHITE ARKITEKTER AB - 2016

#### Select Model Elements

Select Model Element - Floor  
Select Element  
Nothing selected.

Select Model Element - Topo  
Select Element  
Nothing selected.

The more divisions, the more points... The longer it will take to run the script (but also more accurate).

Similar to the accuracy defined by the divisions, this spacing relates exclusively to the edge of floor.

If set to 0, the floor will be flush with the topo.

Click the select button, navigate to Revit and click on the floor geometry to be included in this push.

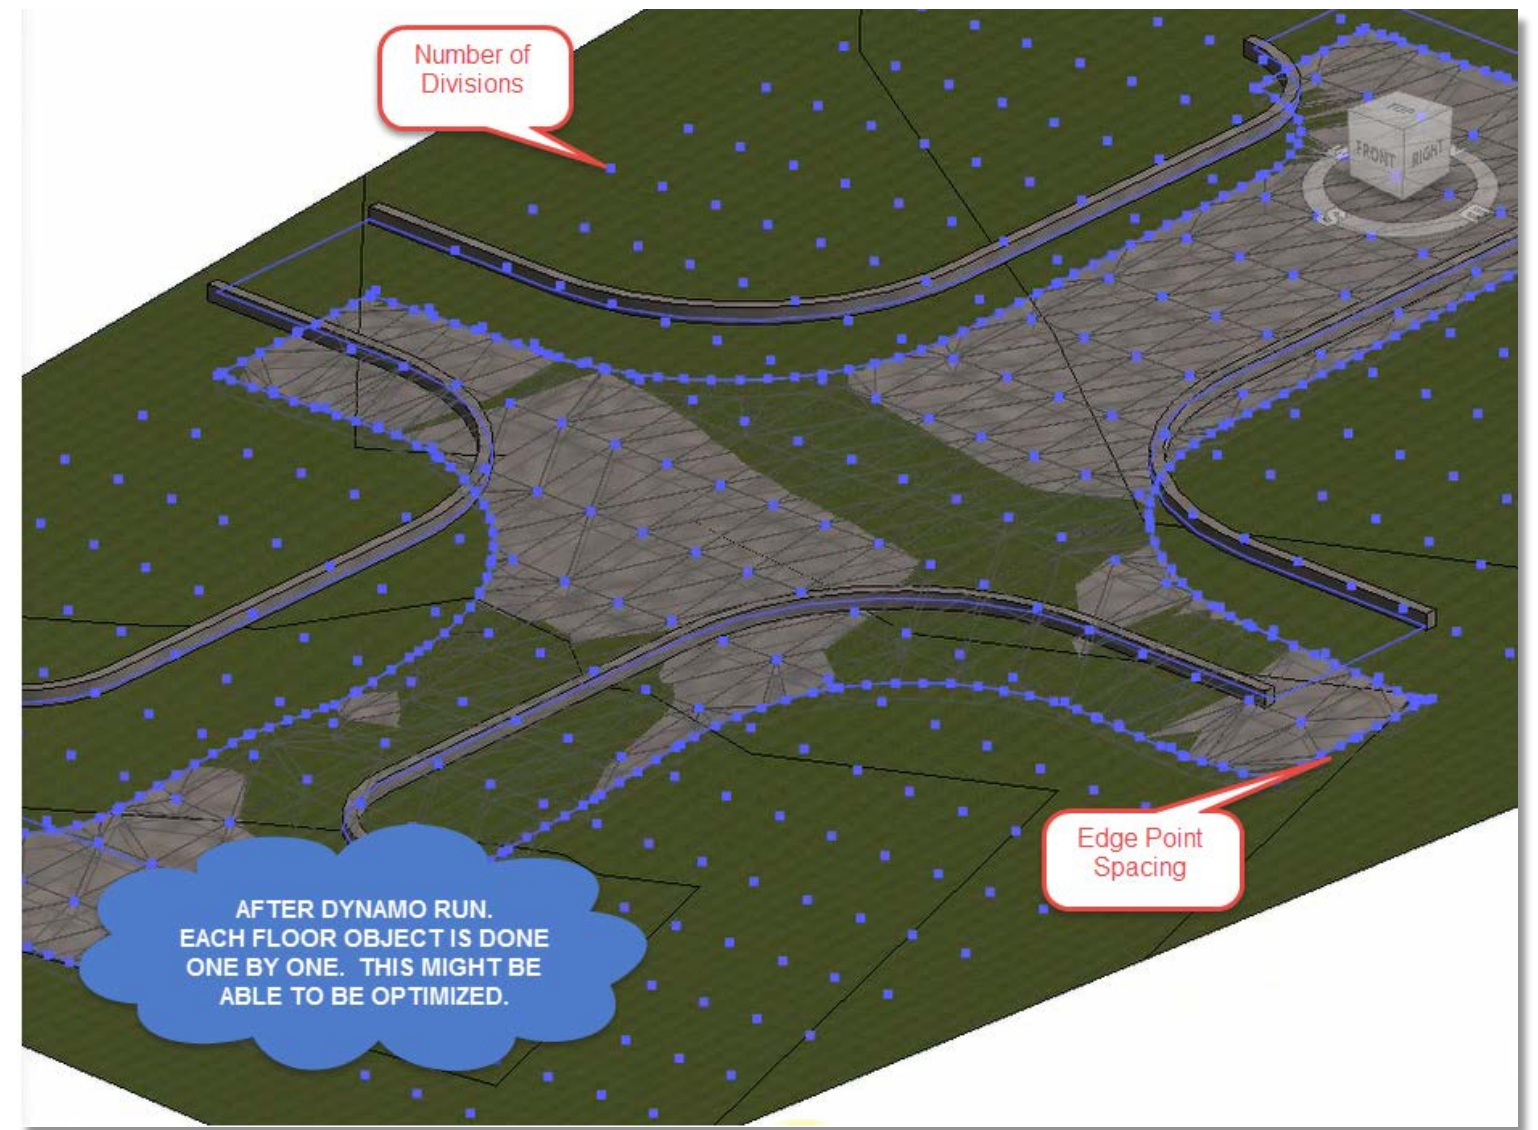

Click the select button, navigate to Revit, and click on topo surface geometry.

# Coordinating Dummy View Tags Across Linked Models

## User Interface – Script 1

The script generates a unique identifier that can be tied to dummy view references.

CREATED BY: Josh Moore  
CREATED: 2016-10-03

VERSION 1.1.0  
LAST EDITED: 2016-10-03

DYNAMO VERSION: Dynamo 1.1.0

PACKAGES:  
Clockwork

NOTES:  
This script will push the current model name + separator + GUID value to a text parameter for use with coordinating details across a link using dummy view families). Another script does the compare and refresh.

After running the script, close the opened excel files. The "Push Data" script will update the #REF on the next open, automatically

# Coordinating Dummy View Tags Across Linked Models

## User Interface – Script 2

This script updates the view references with the respective data tied to the unique identifier.

CREATED BY: Josh Moore  
CREATED: 2016-10-05

VERSION 1.2.0  
LAST EDITED: 2016-10-05

DYNAMO VERSION: 1.2.0

PACKAGES:  
Clockwork

NOTES:  
This script will push sheet number and detail number from an excel file by matching a parameter value between the linked view (excel file) and a dummy detail component view symbol.

Need families to have the word "Detail Link" in the name (could be changed in the script) or the script will ignore the family.

Family needs 3 parameter values, ("Detail Number" and "Sheet Number" and "View\_GUID").

**Run Script> Undo Dynamo Transaction in Revit> Close Script> Reopen> Repeat**

# Tips & Tricks

## No Commands Active in Revit

- Not obvious, huge issue if you don't realize it!!

# Tips & Tricks

## Pay Attention to Active View in Revit

- Certain scripts may rely on performing an operation on the active view
- Multiple Revit models open in the same Revit session can make Dynamo confused.

# Tips & Tricks

## Use Out of the Box Nodes as much as Possible

- We love what developers are doing!
- Issues can occur with updates, pointing to the right packages, etc.
- Use a couple OOTB nodes if you can instead of a “shortcut” third party node.
- Embed the Python script to ensure no dependencies and get better error messages

# Tips & Tricks

## Script Versioning

**Example 1:**  
**Push Scope Box Name to**  
**Element v1.2.0.dyn**

**Example 2:**  
**Shape Edit Floor to Match**  
**Topo v1.1.0.dyn**

Increment (updates,  
fixes, etc.)

v1.2.3

Dynamo Version

# Tips & Tricks

## Shared Location For Third Party Packages

- Reusability
- Scripts Failing from “New Features”
- Revit & Dynamo Changes
- Location Suggestions

**{mapped drive}:\Dynamo\Packages\{Dynamo Version}\**

For example: **O:\Dallas\Dynamo\Packages\1.2\**

# Tips & Tricks

## Script Organization, Graphics and Commenting

- There is a great method already suggested that we have used
- Group and Comment “logical” sections of the script
- Add additional information like Required Packages, Instructions, Author and Date.

# How did we do?

- Your class feedback is critical. Fill out a **class survey** now.
- Use the AU mobile app or fill out a class survey online.
- Give feedback after each session.
- AU speakers will get feedback in real-time.
- **Your feedback results in better classes and a better AU experience.**
