

# Convert. Share. Collaborate.

Revizto is a real-time visual collaboration tool for anyone working on a building project

Being a simple, easy-to-use tool Revizto ensures the easiest way to showcase an AEC project as navigable 3D environment and build truly effective collaboration within a project team: BIM managers, architects, engineers, contractors and owners.

## Convert into navigable 3D and Share

Bring your design projects to navigable 3D environment with free Revizto Editor. It converts BIM/CAD models in minutes, preserving all BIM object data and MEP. Share the resulted model with anyone via the cloud-based Revizto Workspace.

## Present your project and Collaborate

Invite your partners for collaboration. Free Revizto Viewer allows them to open the project at PC, Mac, iPad and Android tablets and explore it easily like in a video game. Communicate effectively with your team using smart real-time collaboration tools.

## Manage teamwork and project data

Keep track on your project using Revizto Issue Tracker in real time for real results. Organize teamwork by setting issues, sharing tasks, assigning work responsibilities. Manage all project statistics and generate regular issue status reports.

# Enhance BIM project with Revizto features

## Issue Tracker

With a new built-in issue tracking system assign tasks, check accomplishment, generate regular reports. Integrated with Revit, Navisworks, AutoCAD.

## Object data

All Revit object properties are preserved. Get detailed information about any object just by clicking on it. Find objects by name in the scene.

## Oculus support

View and explore your building design project in a truly immersive virtual reality! Revizto is the first to provide this opportunity for AEC software.

## Viewpoints / Section cuts

Save any spot in the scene as a viewpoint for easier navigation and presentation purposes. Each viewpoint can contain individually configured Section cut.

## X-ray mode

Work with visibility mode and make objects transparent to see what's behind them. Turn categories on/off or view them in X-ray mode.

## Camera sharing

Demonstrate your project to teammates and clients from your angle! Invite them to an online tour: be sure they see exactly what you want them to see.

## 2D Sheets

Export and explore 2D sheets in the Viewer. Overlay sheets on top of 3D to get better understanding of your model.

## Merging

With a merging tool you can put together different parts of a project or several models to create a full scene of the entire project.

## Web Viewer

Draw more attention to your project. Publish it on your website or share in social media. No need for additional plug-in.
