Abstract ID : AULON598

Bridging Mechanical Software and BIM: A Pumped-Storage Hydroelectric Plant in Morocco

Description: The project consists of a pumped-storage hydroelectric plant in Morocco (project value: 284 million euro). The water stored in an uphill tank will be released into a 3-kilometer transfer line (penstock and galleries) and travel on a natural slope to a reservoir about 550 meters downhill. A 350 MW hydroelectric plant will be built along the penstock between the upper and lower reservoir. The reversible plant will generate electricity when operating in turbine mode and pump water from the lower to the upper reservoir in pumping mode. Thus the system will generate renewable energy on demand and can be switched between pump and turbine mode up to 20 times a day, depending on the amount of surplus electricity available or the needs of the Moroccan electricity grid. This class will focus on the plant and the project BIM challenges and goals. I will explain the different actors, their scope of work, their tools, and their different software packages. I will also explain how this new way of working was implemented even if no actor has completed a BIM project before. The main obstacles of the project, concerning digital transformation and interoperability will be highlighted and explained. The class will review all experiments that have been done to achieve 2 main goals: allow a good model integration in the design software despite their differences and produce correct 2D drawings. The class will show how Revit can integrate mechanical files made by Siemens NX through .sat files and Inventor, and the best practices and ways to integrate the models correctly. It will also show the reverse way how the mechanical software can integrate Revit files. It will present a workflow to integrate all models into Navisworks through Revit to be able to do classic 3D coordination. The presentation will conclude with the main benefits of working with 3D models instead of 2D information even though the workflow is longer and more complicated sometimes.

Presenters:

Philippe Testard
Andreas Marschall
Nabil Nougha

4

...the grass is greener on the other side...

5

The grass is greener where you water it!

6

Civil

- Change of mindset (Sharing is Caring)
- Consideration of a lot of parameters instead of "Just 3D drawings"
- Increasing designer skills
- Formworks drawing the "french way"
- Precast/Rebars needs to be developed
- Sub-suppliers often not BIM compliant

7

Andritz / Electromechanical

- Software, Software, Software!
- IFC classes not reflecting complete scope
- Silo mentality
- Concept design critical
- Long supply chain
- Cable routing not feasible in Revit
- O&M implementation
- Linking of external information
- Sub-suppliers often not BIM compliant

8

About Vinci

Key figures 2017 (including joint ventures)

Quality Control Checklist

BIM TEAM WORKSHEET			
Items to verify		Evaluation	Remarks
		Good / Yes / Required	Not good / No / Not required
General	Items verified	Yes	
	All items in English	Yes	Check all models for element types
	Clear organization (project browser)	Yes	Make difference between user AAS (AAS/UM/BS)
	Project information	Yes	Check in BIM Information Sheet for missing information
	Project name, project / company name	Yes	Check name project and check all models in project in the same way
	Project title	Yes	
Accuracy	Number of warnings	Yes	Check warnings. Major warnings shall be avoided
Workset	Organization of Worksets as defined in BIM representation plan	Yes	Check if elements are in the correct workset
	Workset of elements defined in BIM representation plan	Yes	
Leveling	Leveling system	Yes	Check name convention
Project Material	Reference to 3D, structural and load only	Yes	
	Check list of project / presentation	Yes	Check all completed for, missing performance, etc.
Workset report	Project of structural elements	Yes	
Family general	Organization of project family categories, for each design element	Yes

51

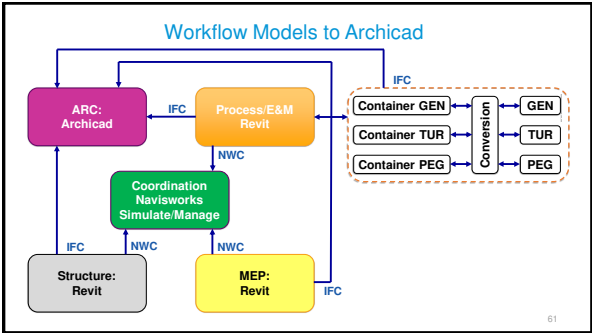

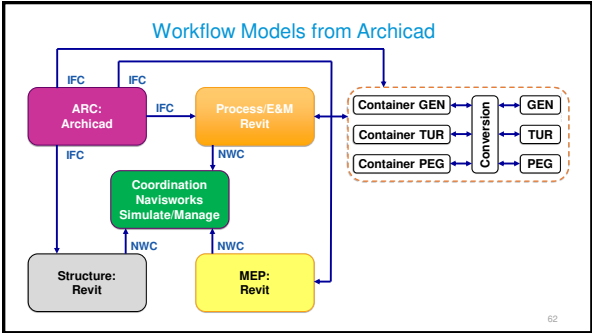

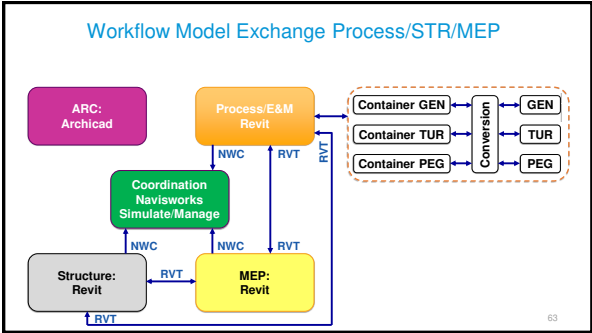

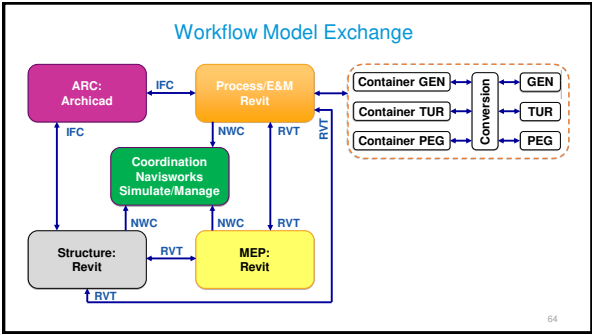

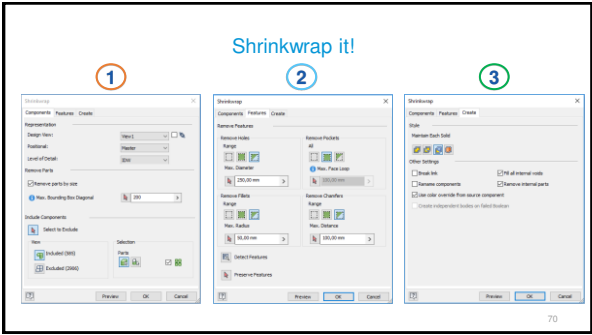

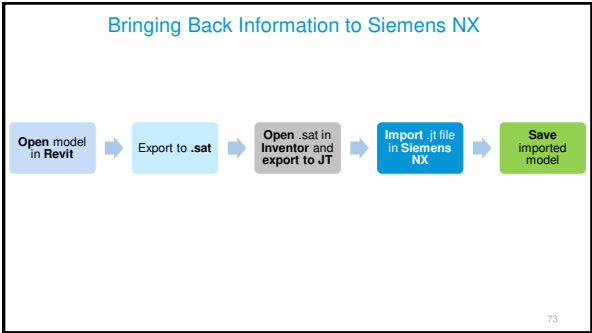

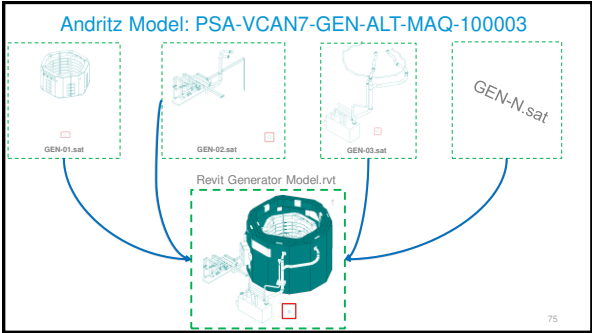

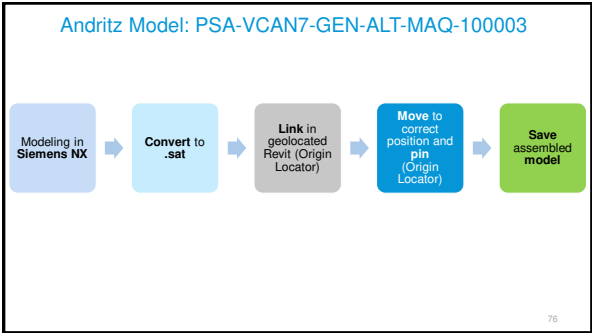

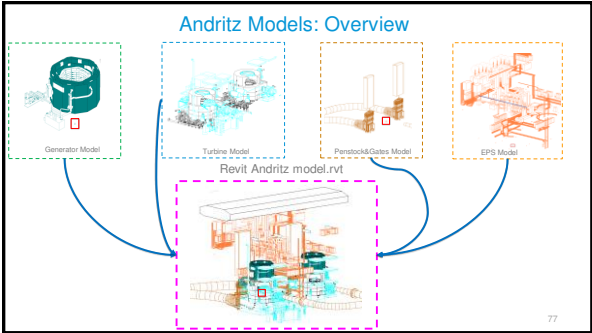

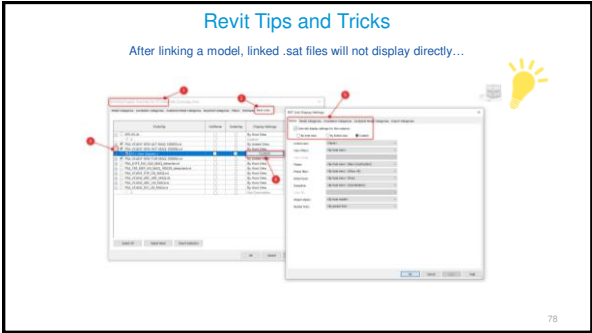

Revit Tips and tricks

Tip: Create view templates to apply these parameters to all views.

79

The Way to Wisdom...

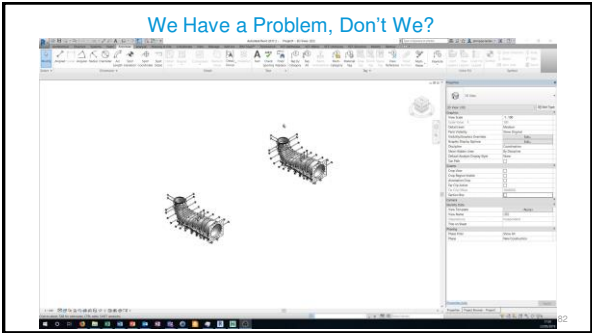

2D Drawings Compared to BIM Models

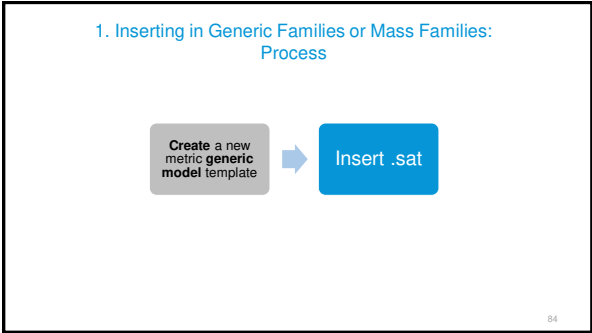

- On site = used during erection
 - Dedicated purpose
 - Contains limited amount of information
- Various use-cases (site, coordination,...)
 - One model for all systems
 - Covers all information (can be hard to find)

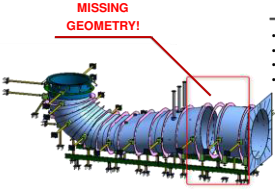

81

1. Inserting in Generic or Mass Families

 Advantages	 Disadvantages
<ul style="list-style-type: none">• Native Revit file• View plan sectioning• Upper plan sectioning• Section plan sectioning	<ul style="list-style-type: none">• Missing geometry• No automatic placement in models• Requires family management• Generic families (filter to handle visibility of elements needed)

* Case 14274218

85

After Months of Research...

86

2. The Painstaking but Working Method

Load container file with linked .sat files

Export 3D dwg file from a 3D view containing elements to be included.

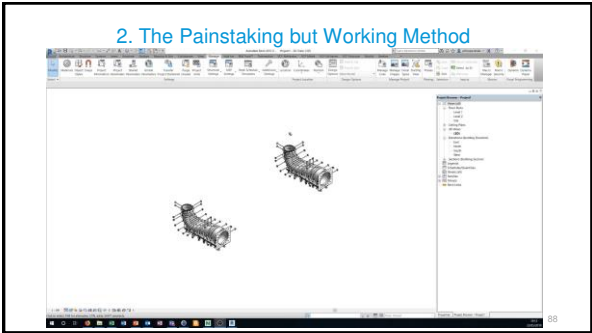

Create a new generic model family

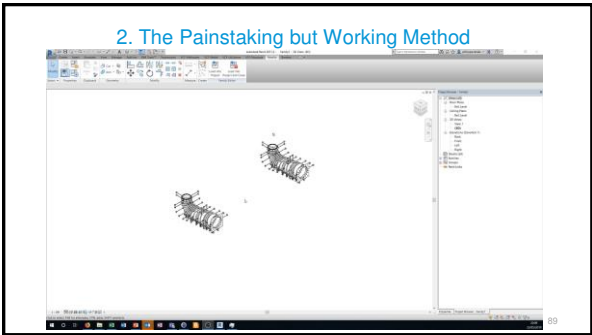

Insert 3D dwg « origin to origin »

Load family into the model

Adjust view settings and create templates and worksets

87

2. The Painstaking but Working Method

Advantages

- View plan sectioning
- Section plan sectioning
- Upper plan sectioning
- No more missing Elements

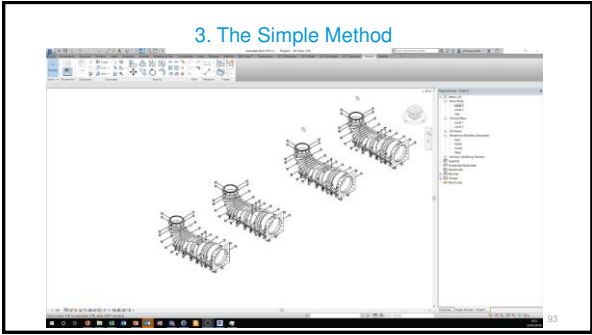

Disadvantages

- File extremely heavy and slow
- Exporting may crash the computers
- Requires huge model organization
- No automatic placement in models
- Very time consuming

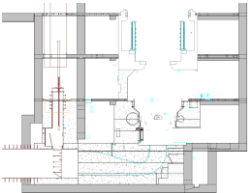

Model	Element	Quantity	Volume	Weight	Material
1000000000	1000000000	1000000000	1000000000	1000000000	1000000000
1000000000	1000000000	1000000000	1000000000	1000000000	1000000000
1000000000	1000000000	1000000000	1000000000	1000000000	1000000000
1000000000	1000000000	1000000000	1000000000	1000000000	1000000000
1000000000	1000000000	1000000000	1000000000	1000000000	1000000000
1000000000	1000000000	1000000000	1000000000	1000000000	1000000000
1000000000	1000000000	1000000000	1000000000	1000000000	1000000000
1000000000	1000000000	1000000000	1000000000	1000000000	1000000000
1000000000	1000000000	1000000000	1000000000	1000000000	1000000000
1000000000	1000000000	1000000000	1000000000	1000000000	1000000000

3. The Simple Method

 Advantages	 Disadvantages
<ul style="list-style-type: none">• View plan sectioning• Upper plan sectioning• Section plan sectioning• Automatic placement for others actors	<ul style="list-style-type: none">• Limited classification (no mechanical equipment for example)• In-place models
