Querp.io

for use with Autodesk® BIM 360™ and Viewpoint® Vista™

BRING YOUR OFFICE AND FIELD TEAMS TOGETHER WITH QUERP.IO

Easily share data needed to move projects forward

Querp.io connects field and office teams by sharing financial data between Autodesk BIM 360 Cost Management and Viewpoint Vista. By providing instant access to mission critical project details, teams have the information needed to work successfully together and better perform their roles in the project.

Field teams manage budgets, forecasts contracts, change orders and payments more effectively in the field with instant access to Viewpoint Vista Job Cost data. At the same time, accounting teams rely on Querp.io to review and grant final approval to all data submitted from the field prior to sharing with Viewpoint. This ensures accounting data integrity and accuracy by eliminating double entry and ultimately streamlining payroll, AR, and AP processes.

Querp.io is a cloud-hosted solution connecting Autodesk and Viewpoint to share and manage critical project financial data. Designed as a secure approval gateway for accounting data, security, and integrity, it also manages data exchange in real time. Additionally, a configurable notification center provides essential notifications to any team member that needs to stay informed.

BOOST TEAM EFFICIENCY + VISIBILITY

with Querp.io

GIVE YOUR TEAMS WHAT THEY NEED TO SUCCEED

Autodesk BIM 360 → Querp.io Cloud → Querp.io Connector → Your ERP Database

- Web-Based Approval Gateway
- Azure-Hosted SQL Server Database

Your ERP Server*

Built on Microsoft Azure, Querp.io is a cloud-hosted, middle-tier solution connecting Autodesk BIM 360 and Viewpoint Vista, serving as a secure approval gateway, real time data exchange, and configurable notification center.

Querp.io makes data sharing between Autodesk and Viewpoint simple, without losing the data-sharing and approval safeguards you would expect. No server is required and it is easy to set up.
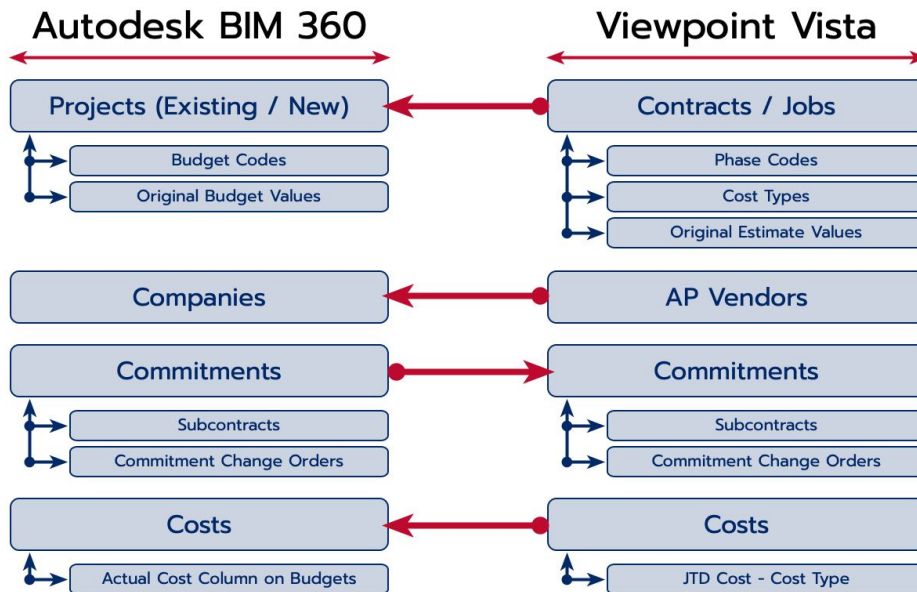

Once Querp.io Connector is installed, data is shared from Vista to Querp.io Cloud. Data records can then be created, linked and shared to and from BIM 360. All field-shared BIM 360 data resides within Querp.io until approved by accounting for sharing with Viewpoint Vista.

Technical Features

- Built and hosted on Microsoft Azure
- Industry-standard SQL Server database
- No server required
- Web-optimized for desktops, laptops and tablets
- Users login with their existing Autodesk account. No user or password management required.

Project Information Sharing Made Easy
Share the following project information with Querp.io v. 1.0:

Autodesk BIM 360

- Projects (Existing / New)
  - Budget Codes
