Proactive Model Management

Holger de Groot
National Director of BIM

Mehdi Blanchard
Technology Innovation Specialist

AUTODESK. UNIVERSITY

About the Speaker

Holger de Groot

As National Director of BIM for the Australian region, my role is to supervise and guide Digital Practice Leaders at HDR. I am responsible for implementing and advising leadership on the corporate Digital Practice BIM Strategy, interacting with various disciplines and advising on BIM matters at all levels.

https://www.linkedin.com/in/holger-de-groot-11741336/

About the Co-Speaker

Mehdi Blanchard

As a Technology Innovation Specialist, my role is to assess new technologies and find creative ways to implement them in our workflow. I also research, design and develop custom software solutions for HDR globally.

https://www.linkedin.com/in/mehdi-blanchard

Profile

HDR is a creative firm for architecture and engineering with experience spanning over 40 years in the Australian market. With more than 10,000 employees worldwide in more than 200 offices around the globe, we have access to highly informed best practice, innovative future-thinking and top talent from around the world, allowing us to contribute world-class intellect, expertise and specialist knowledge to our projects.

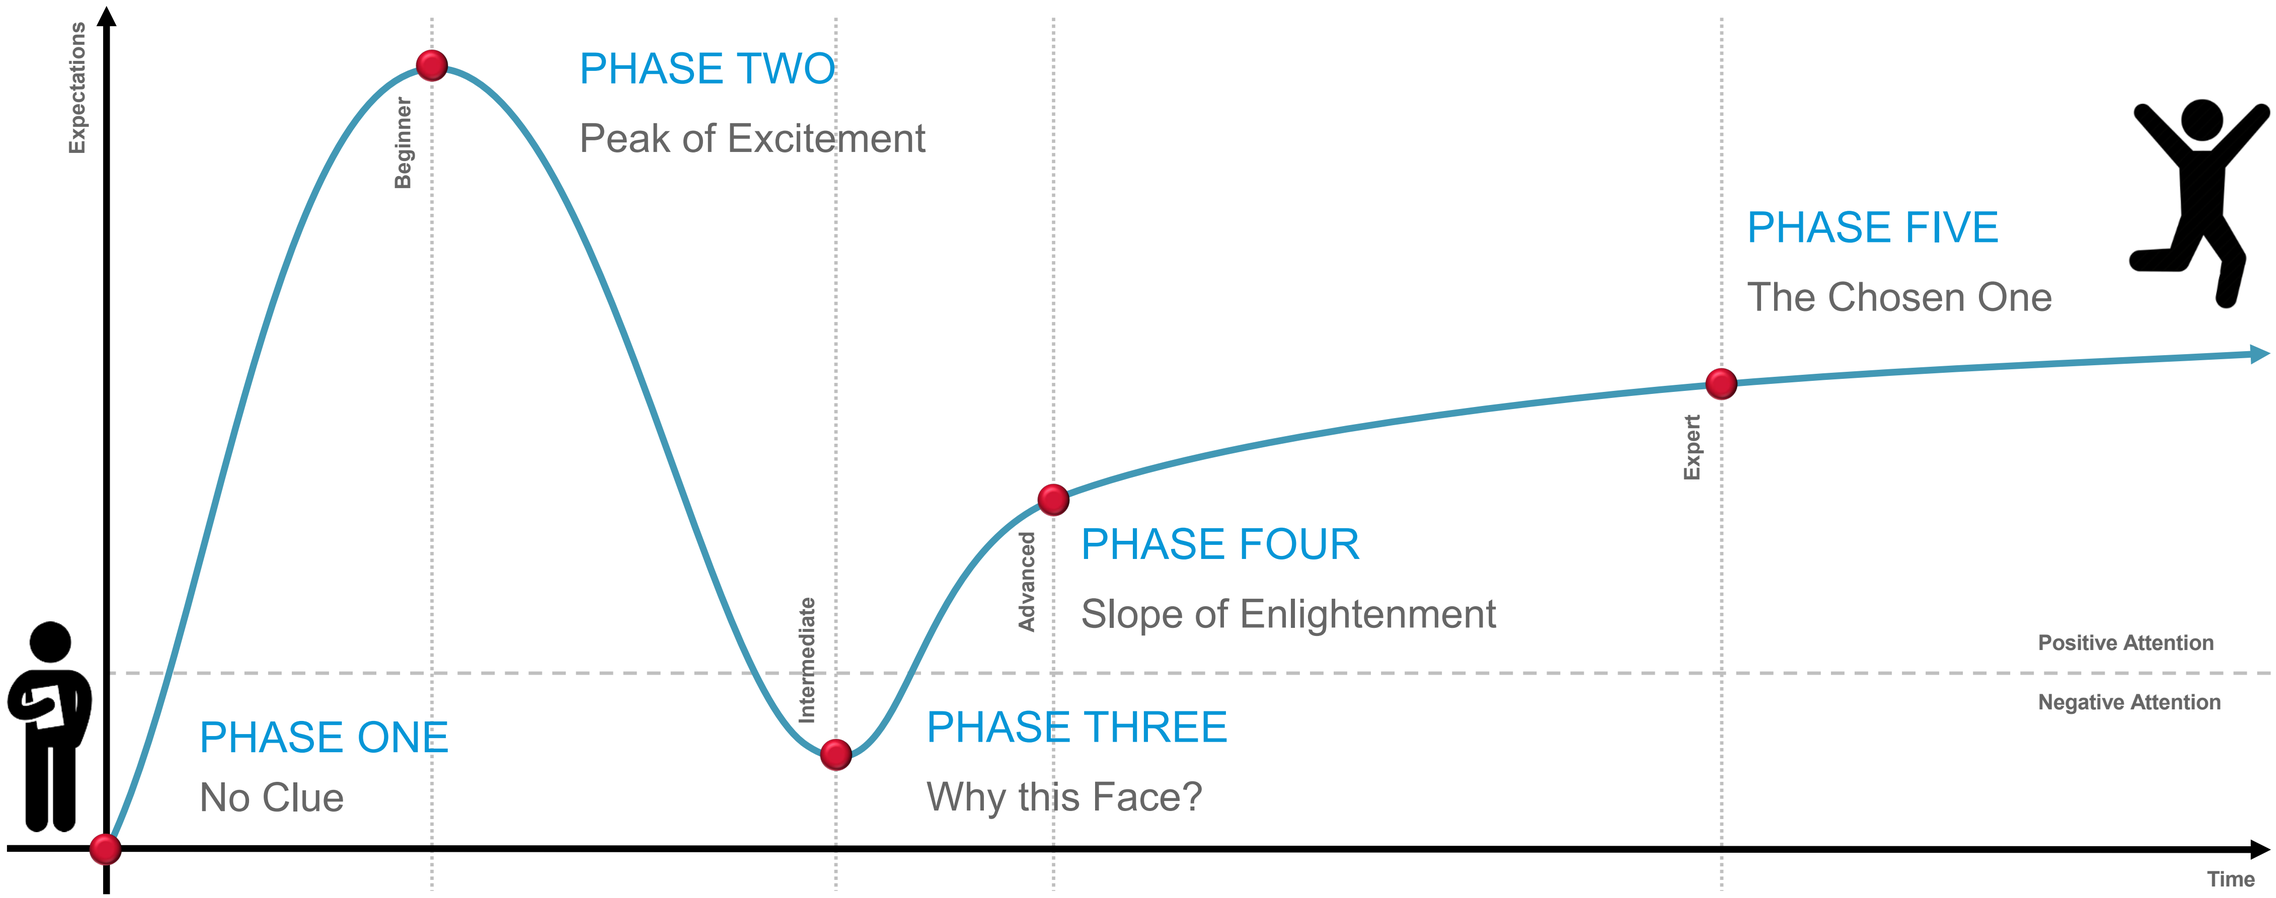
Lessons Learned

Stop Reacting - Start Responding

Five Phases of Revit

One of the things that occur in many offices is that, after training, everyone is expected to be an expert at using Revit. But it takes time for new Revit users to get comfortable with the program, the new workflows and to build up a high level of user knowledge.

Five Phases of Revit



Why doesn’t it work?

New Revit users are usually being asked to learn the software as they are working on a project. Even if they come prepared with basic training, they will quickly find that not everything is going to work like it did in their training sessions which can lead to frustration!

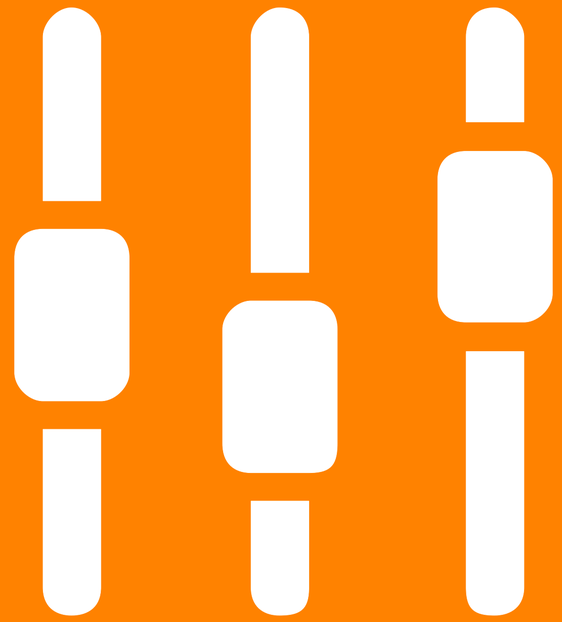
How do I fix this?

Quite often, new Revit users not only have to educate themselves online (webinars, eLearning, user forums, etc.) but also find themselves without the support they need to be able to review what they couldn't do and everything else that caused frustration. Revit's inability to provide user-friendly feedback isn't making it easier for them.

Start Responding!

We realized that it was time to develop a tool for our Project Leaders and BIM Managers that could not just be used to monitor the project status and ‘health’ of individual models, but would also allow them to identify critical areas before they turn into problems – a tool that would allow them to proactively manage a project.

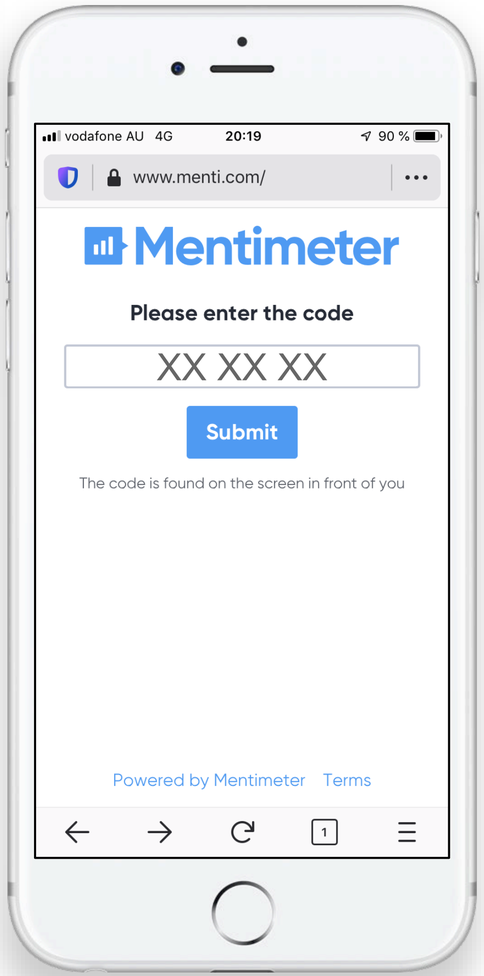
Key Performance Indicators



Step One

DEFINING KPIS

Key Performance Indicators allow us to measure and discuss what we are trying to improve.



Which KPIs Do You Measure?

INTERNAL REVIT QUALITY AUDIT CHECKLIST

Project Name:		File Name:	Auditees Name:
Project Number:	Audit Date:	Project Phase:	Auditors Name:

Activity	Result C, I, N	Comments * [C = Complies, **I** = Improve, **N** = Noncomplying]
1.3.2. Is the 11.0 BIM file structure in accordance with the HDR Revit Standards and Documentation Management Manual requirements?		
1.3.3. Is there a Document Management System (e.g. Aconex, Project Centre, Team Binder, Incite etc.) applicable to the project that influences the implementation of HDR BIM protocols?		
2. REVIT MODEL(S)		
Review the following BIM issues:		
2.1. Setup:		
2.1.1. Is the Starting View for all models: [*** - **projectLandingPage** - ***]?		
2.1.2. Is the site file using '*Real World*' coordinates at 0,0,0?		
2.1.3. Have RLs been set relative to Australian Height Datum (AHD)?		
2.1.4. Are Building file(s) built at 0,0,0?		
2.1.5. Is Project Information complete and consistent across files?		
2.1.6. Are warnings less than 1 per 1 MB of file size (minimum Room, Wall, Door and Window Warnings don't exist)?		
2.1.7. Have all Views been assigned View Templates?		
2.1.8. Are filters in accordance with HDR naming conventions?		
2.1.9. Are parameters in accordance with HDR naming conventions?

Model Health Review

Project Name	BLDG 3613 RENOVATION	Color Code Manual User Input		None Printing Column
Project Number	1007527			
Model Name (Local)	10077527-A-CENTRAL_JBA_BLDG			
Date & Time	8/30/17 9:45 AM			
Next Approx. Review Date	9/14/2017	Color Code Automated Script Input		
Revit Version	2017			
Revit Build No.	20170118_1100(x64)			
Reviewed By	RCROKE			Notes & Instruction
Model Size (MB)	56	<---------- Model size is acceptable (Below 400MB)		<-----Model Manager or BIM Manager, manually enter the models file size in MB into cell B10 if it does not auto populate
Issues to Check	Results	Assessment	Comments & Considerations	Unless otherwise noted in this column, all data is populated by the Dynamo Script
Total Model Warnings	No. of Warnings 42	Action Required. Reduce warnings to improve model performance and minimize risk of model corruption. Total number of warnings exceed 1/3 of the model size in MB	Maximum Acceptable 19	Model Manager or BIM Manager, manually input the total number of model warnings into cell B13 if NOT Automatically populated.
Copy/Monitor Warnings	No. of Coordination Review 0	Good! No Action Required	NOTE: Only include copy/monitored items such as Levels, Grids, Floors, etc...	Model Manager or BIM Manager, How many Coordination Review Warnings are associated with ANY Revit Link? Insert number in cell B15. (NOTE: This is NOT referring to Clash Detection)
Model Groups	8	Good! No Action Required	NOTE: As a general rule we should limit groups because they do a lot to increase model sizes. Avoid creating groups when they are not needed.	Model Manager or BIM Manager, Please limit use of Model Groups as they increase the model size dramatically. Check you groups for instances of 2 or less, if there is only 1 or 2, a group is not necessary.
Worksets	0	Good! No Action Required	Worksets should not be used like AutoCAD layers	Model Manager or BIM Manager, There are 26 Standard HDR Worksets, use caution when creating more, they may not really be needed.
Elements are on the proper Worksets	Yes	Good! No Action Required	Consider having a 3D view for each Workset for easy checking, we have a Dynamo Script to create those for you automatically.	Model Manager or BIM Manager, open a 3D view or 3D Workset views -> Workset Check view and turn on "Worksharing Display: Worksets". Review objects to validate if they are on the correct worksets. Select "Yes" or "No" in cell B17 based on what you find.
Phase naming is consistent with other models	Yes	Good! No Action Required	The Project team should make sure all Phase names are consistent with all models, and remember, Demo is NOT a Phase.	Model Manager or BIM Manager, review phases (Manage ribbon --> Phases --> Project Phases tab) in all models and denote in cell B18 if difference exist between project models. If differences, talk to team and make notes in cell E18 if they are to stay and why. If staying, check phase mapping of linked files.
Design Options naming is consistent in all models when applicable	Yes or N/A	Good! No Action Required	Design Options can be tricky and used when inapropriate, please consider how you are using them.	Model Manager or BIM Manager, review Design Options (if exist) for consistency in naming between all project model files. Denote results in cell B19. Select "N/A" if design options are not used on the project.

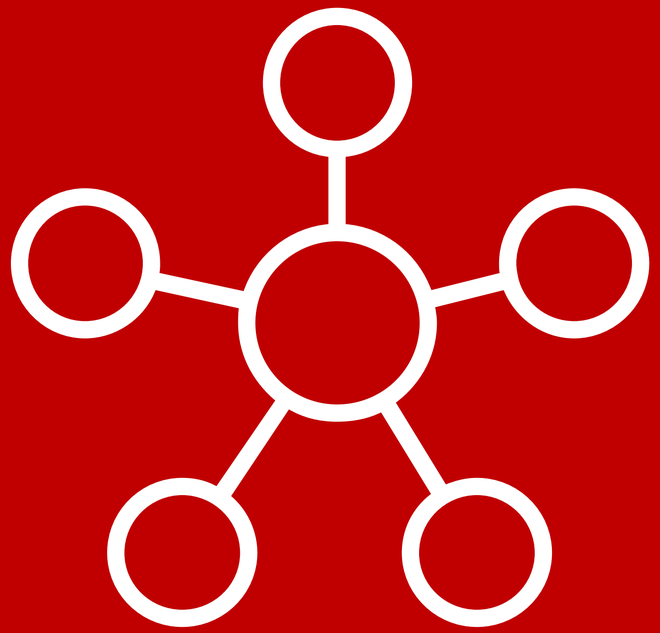
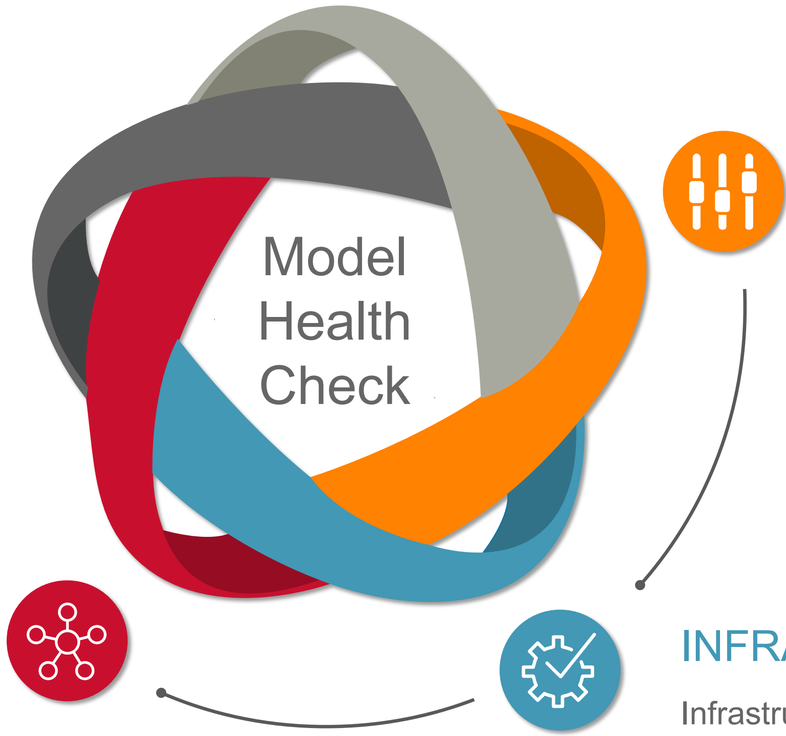
Collecting Data



Step Three



DEFINING KPIS

Key Performance Indicators allow us to measure and discuss what we are trying to improve.

COLLECTING DATA

Integrating the structure and collecting the data of the individual models.

INFRASTRUCTURE

Infrastructure includes various pieces of software and is an upfront investment.

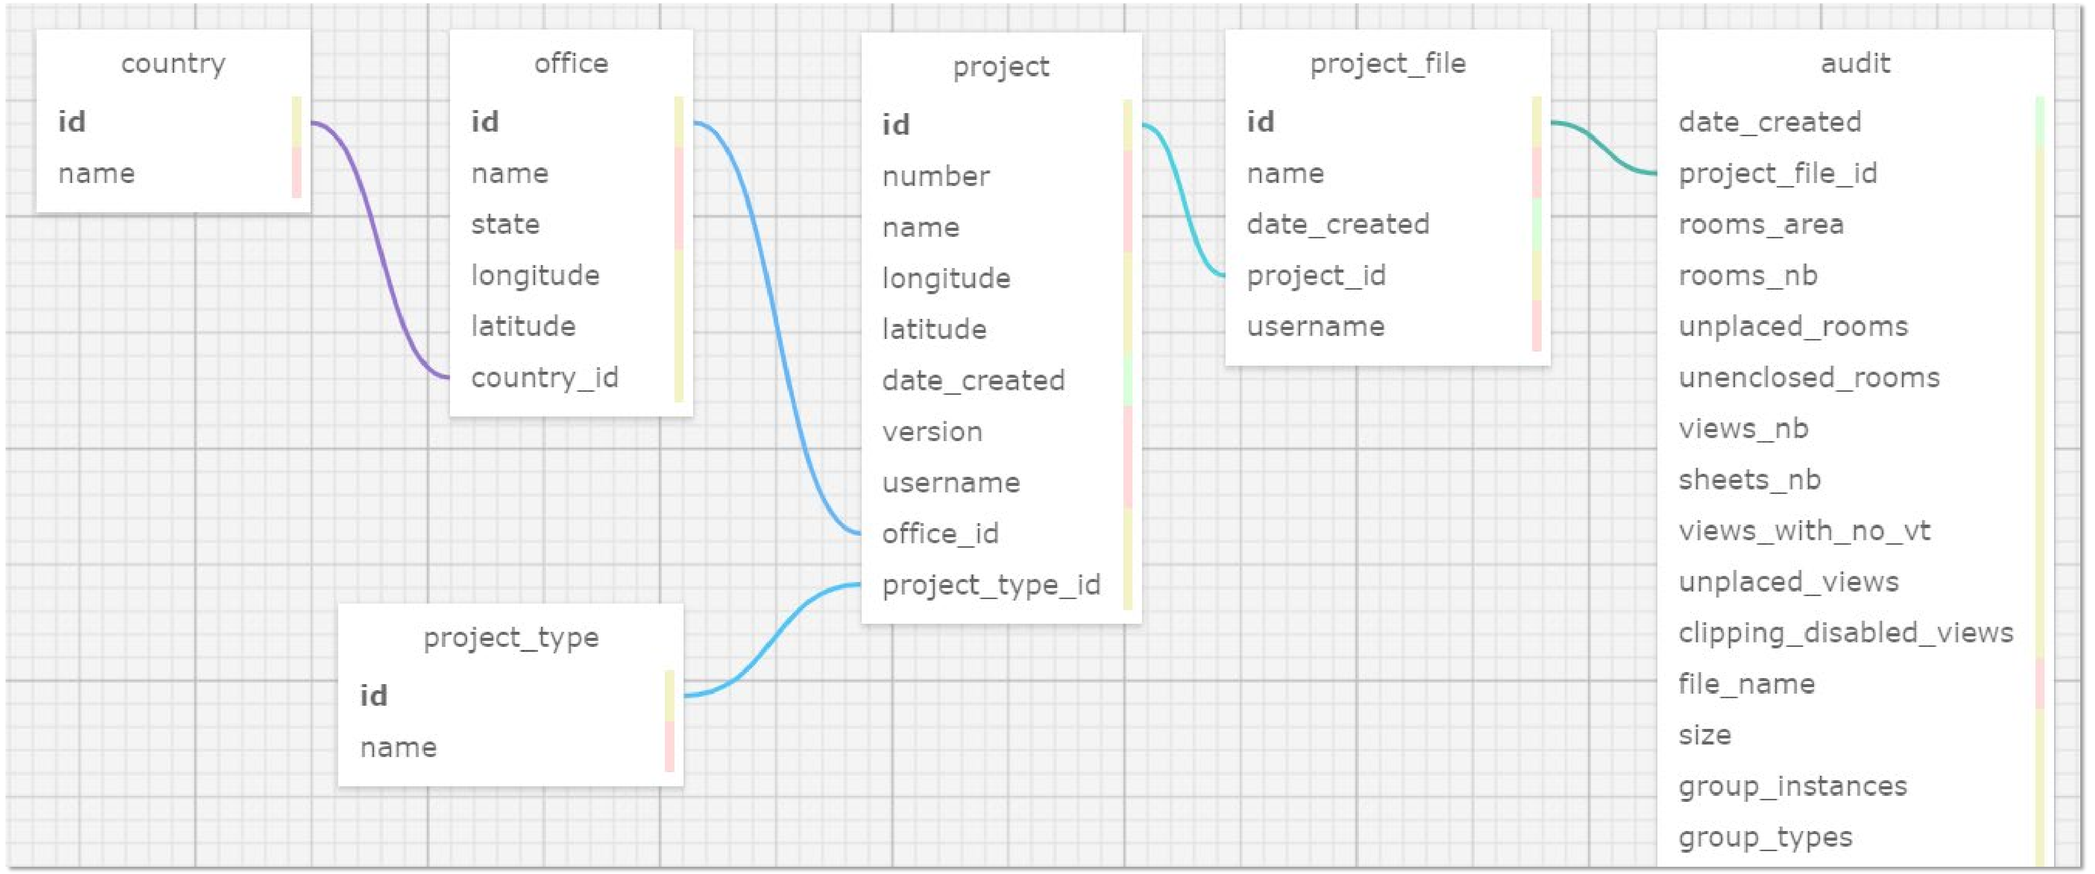
Collecting Data

MACRO PROCESS OVERVIEW

```
// 1. Register event when user synchronizes the document
this.Application.DocumentSynchronizedWithCentral += new EventHandler(Application_DocumentSynchronized);
// 2. Get the data when the user synchronizes
FilteredElementCollector collector = new FilteredElementCollector(doc).OfClass( typeof( SpatialElement ) );
foreach(SpatialElement e in collector) {
        // count number of rooms, room area, check if room is placed, …
}
// 3. Post data to the webserver
var request = (HttpWebRequest)WebRequest.Create("https://myauditserver/audit.php");
var stream = request.GetRequestStream()
stream.Write("mode=AuditFile? rooms_area =roomArea &rooms_nb = roomNb", …);
var response = (HttpWebResponse)request.GetResponse();
// 4. Find the Health Check family in the project file
IEnumerable<FamilyInstance> instances = new FilteredElementCollector( doc ).OfClass( typeof( FamilyInstance ) ).Where( x
=> x.Symbol.Family.Name.Equals("Health Check family" ) );
// 5. Update the Health Check family
Parameter param = instance.LookupParameter("Number of Rooms");
param.Set(roomNb);
```

Collecting Data

DATABASE OVERVIEW - SCHEMA



Collecting Data

DATABASE OVERVIEW - VIEWS

```
SELECT project.id as

FROM project

INNER JOIN project_file ON project.id = project_file.project_id

INNER JOIN audit_activity ON project_file.id = audit_activity.project_file_id

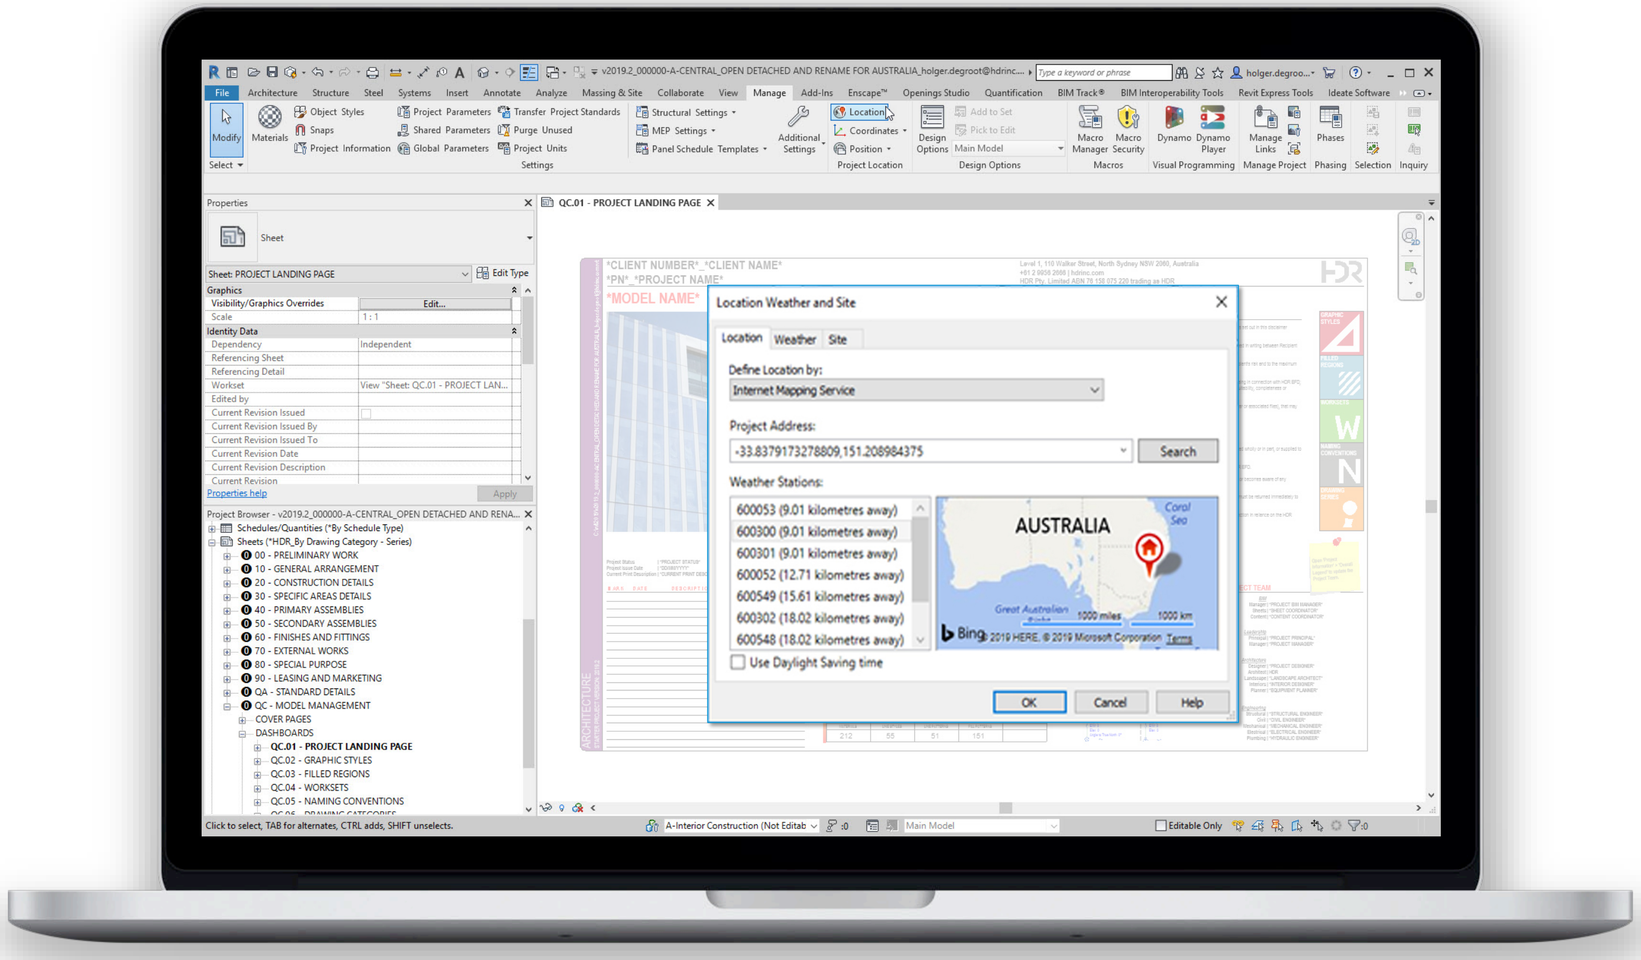
WHERE (audit_activity.date_created > DATE_SUB(now(), INTERVAL 14 DAY))
```

BIM View – Setup

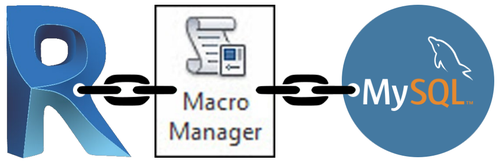
Collecting Data

BIM VIEW – SETUP

Step 1: Define your project's location.



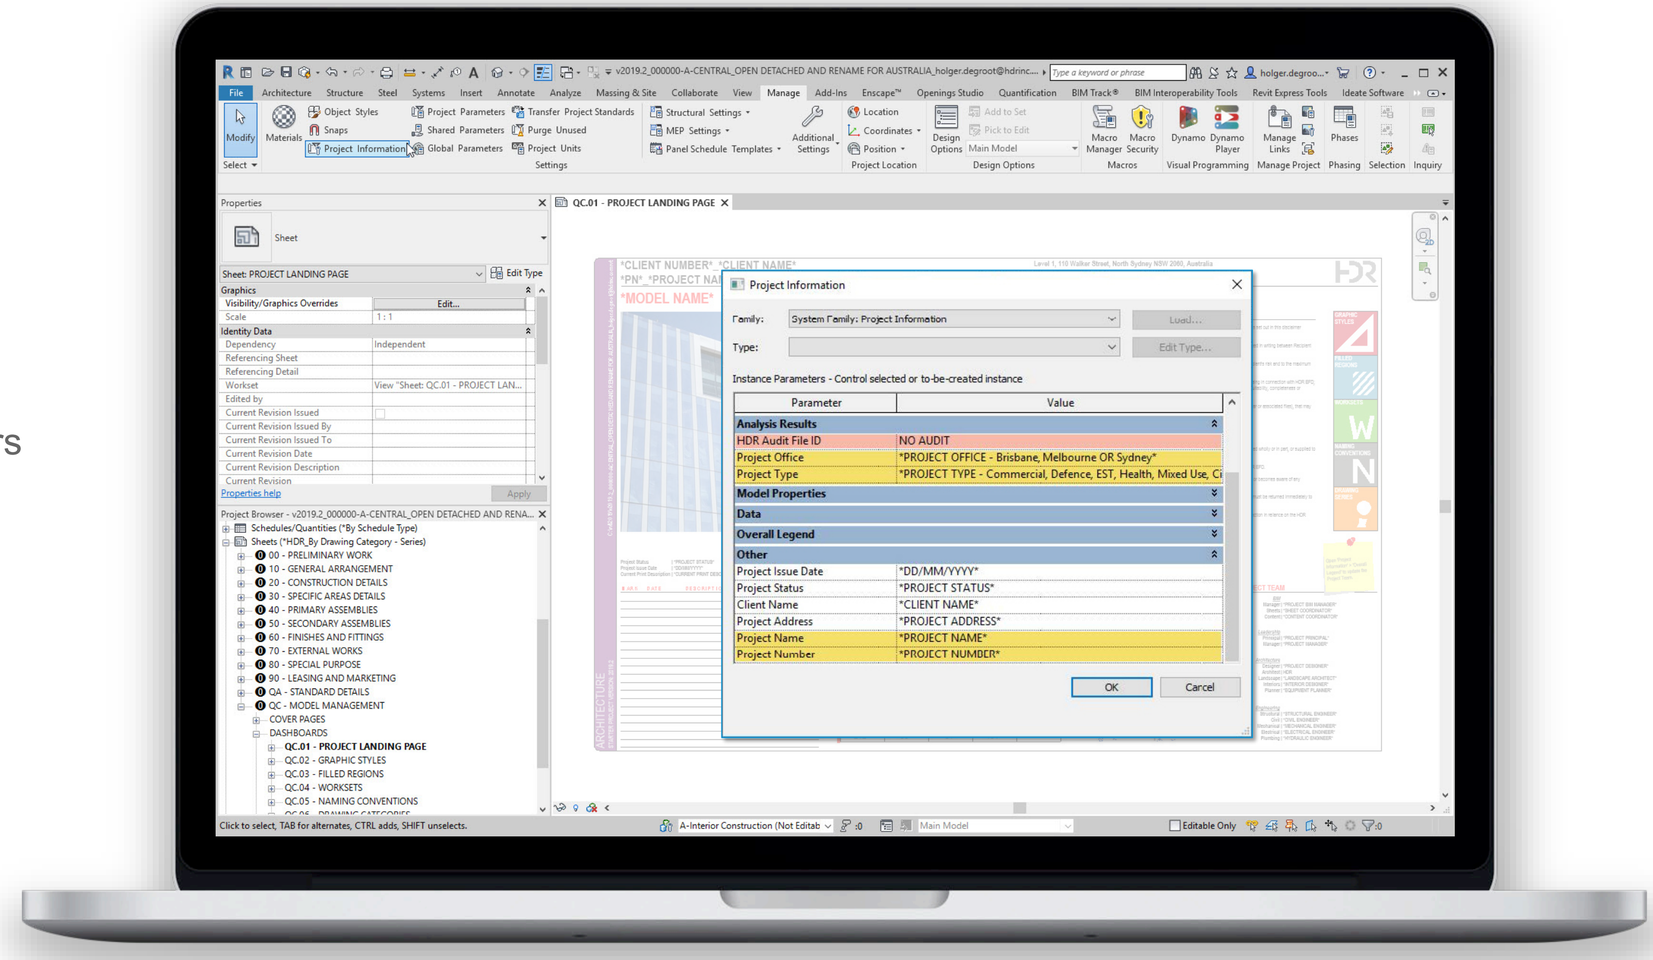
Collecting Data



BIM VIEW – SETUP

Step 1: Define your project's location.

Step 2: Fill out the 'BIM View' parameters under 'Manage' > 'Project Information'.



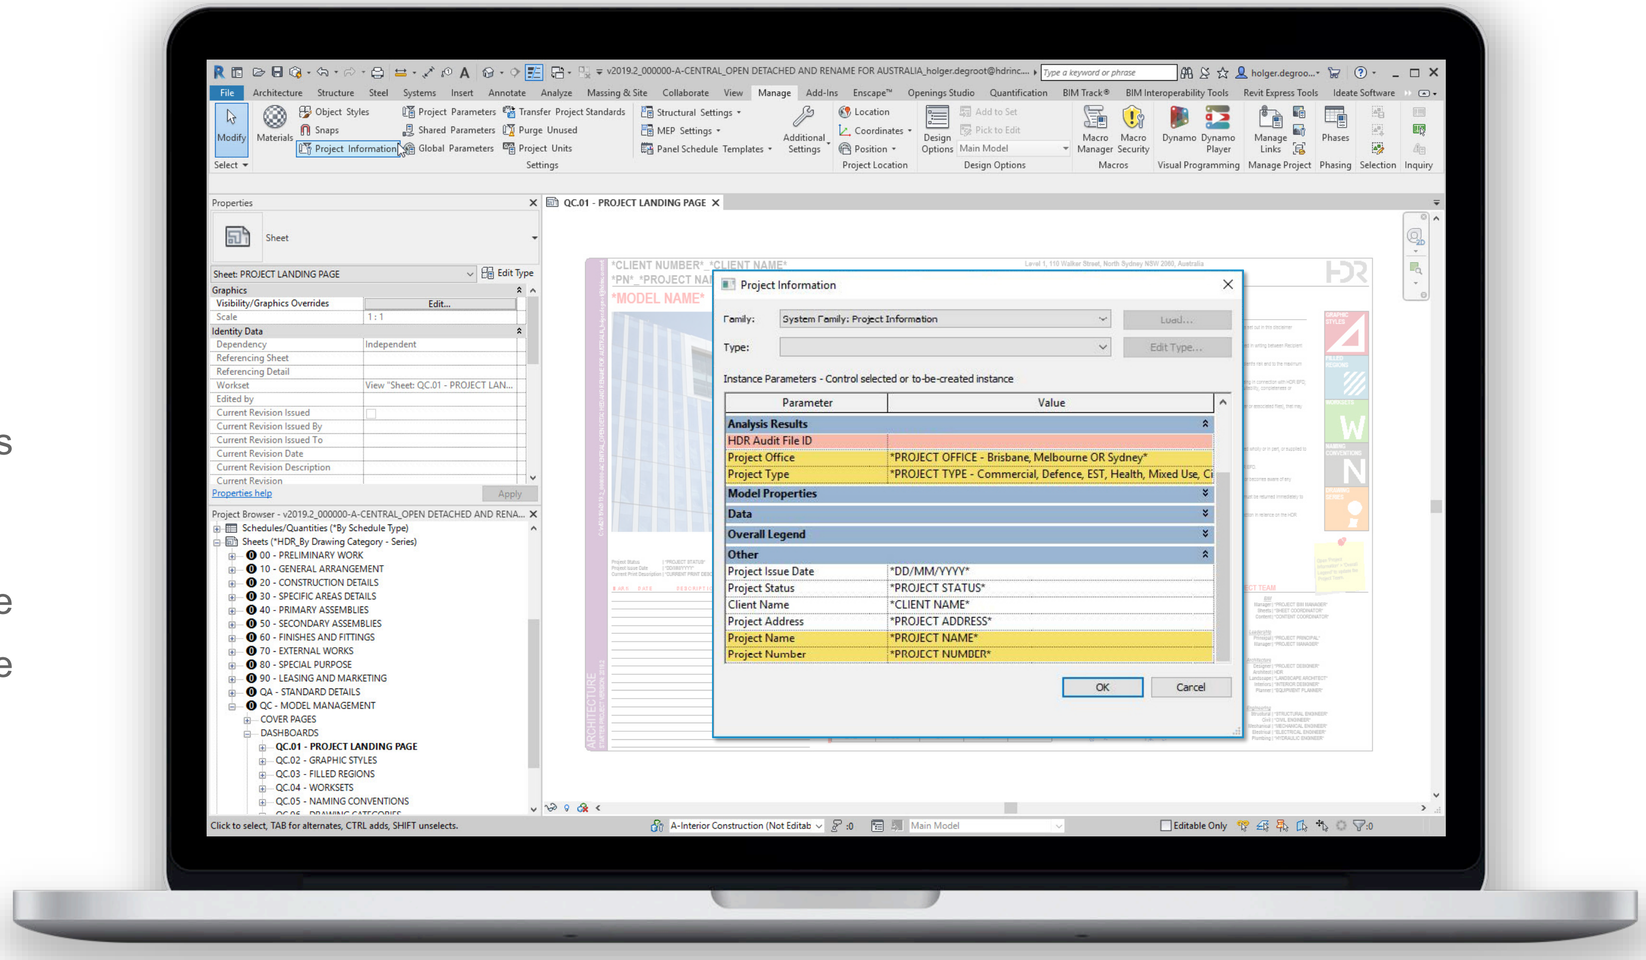
Collecting Data

BIM VIEW – SETUP

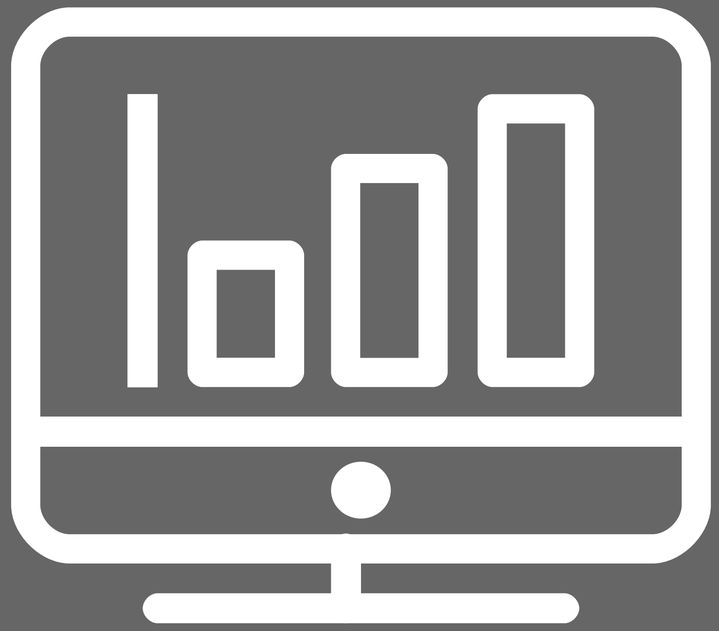
Step 1: Define your project's location.

Step 2: Fill out the 'BIM View' parameters under 'Manage' > 'Project Information'.

Step 3: Delete the 'NO AUDIT' value under 'HDR Audit File ID'. This field will be populated upon successful initial audit.



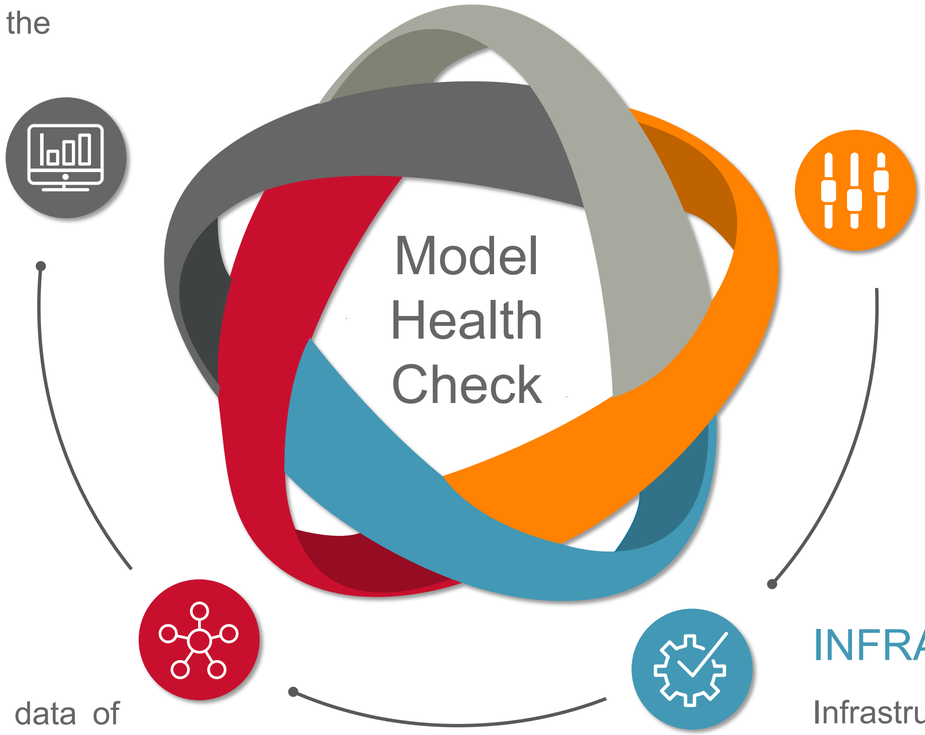
Visualising Data



Step Four

VISUALISING DATA

Visualising the data that will be used to measure the quality of your models.



DEFINING KPIS

Key Performance Indicators allow us to measure and discuss what we are trying to improve.

COLLECTING DATA

Integrating the structure and collecting the data of the individual models.

INFRASTRUCTURE

Infrastructure includes various pieces of software and is an upfront investment.

Visualising Data

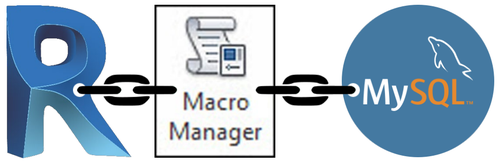
REVIT – PROJECT LANDING PAGE

- Starting View (High Visibility)
- Data input 100% automated
- Updated every 4 Hours

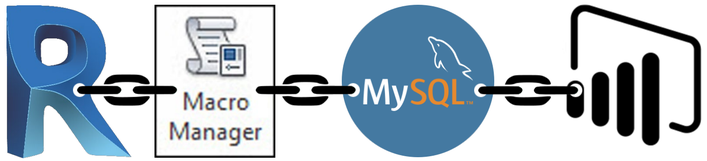
Visualising Data



REVIT – PROJECT LANDING PAGE

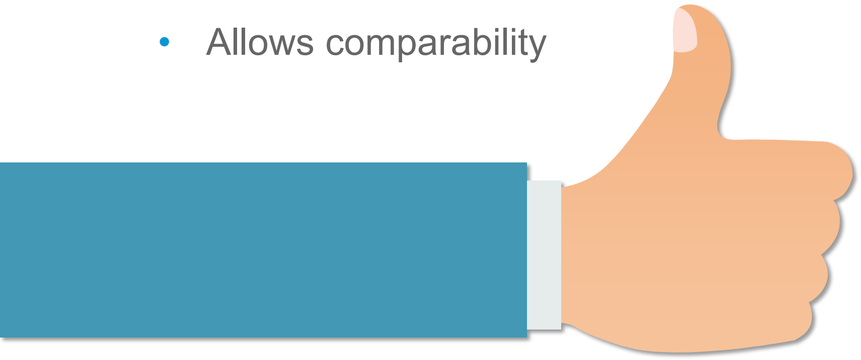
- Only accessible in Revit
- Snapshot of the model state (no history)
- Doesn't allow comparability

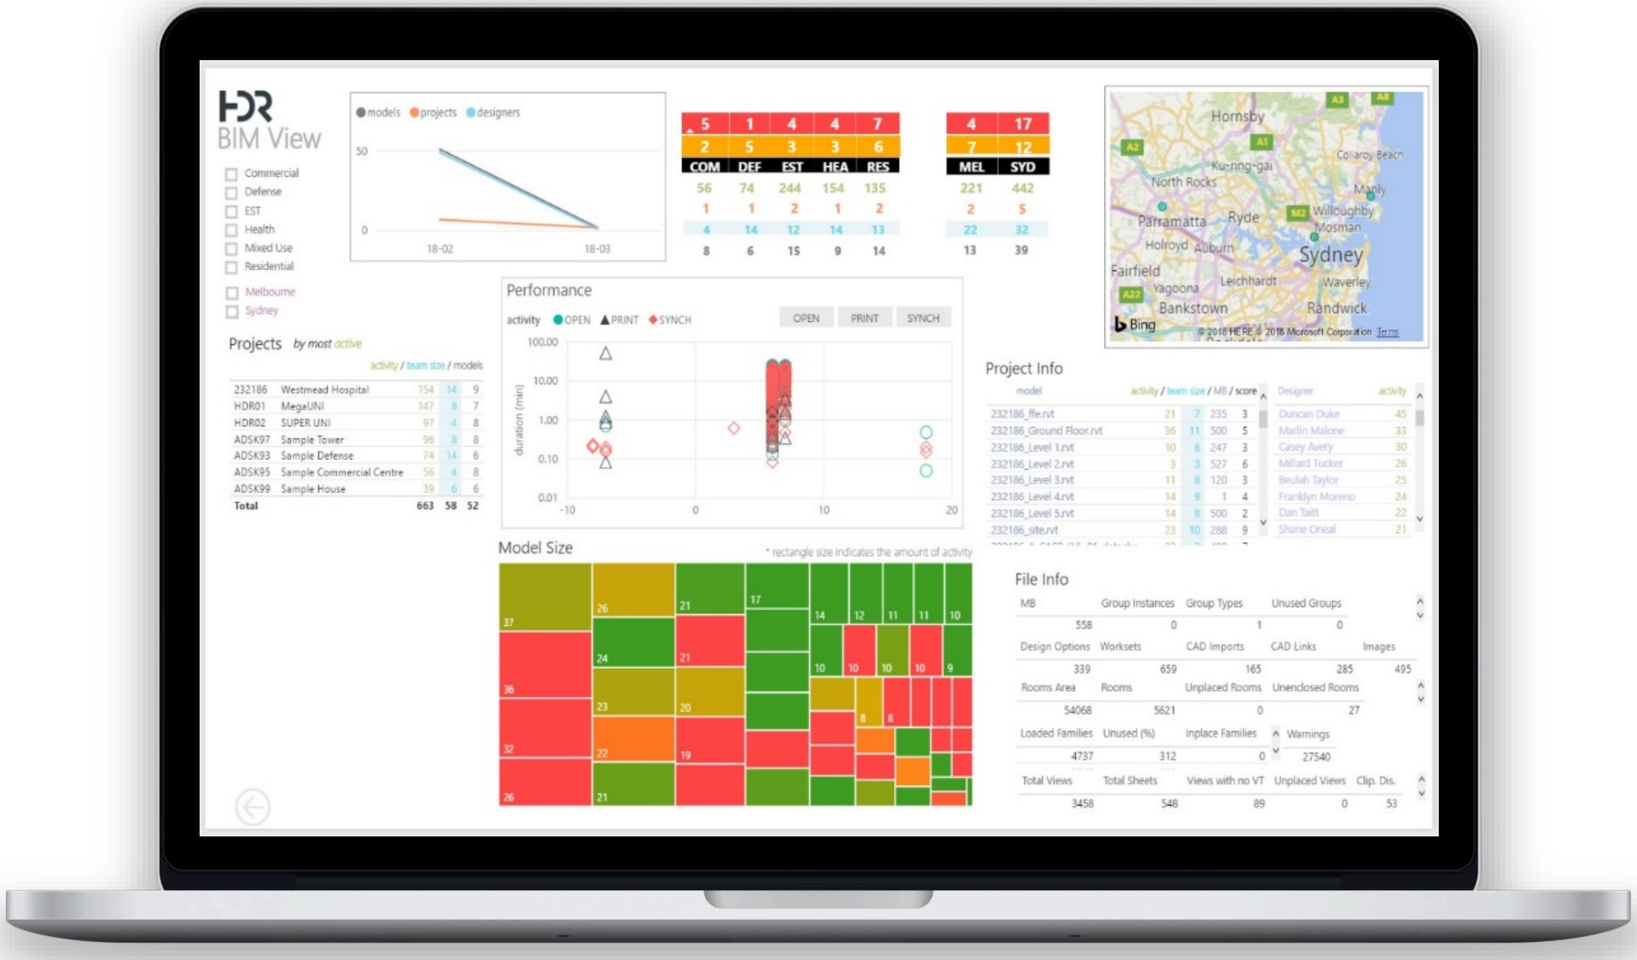
Visualising Data



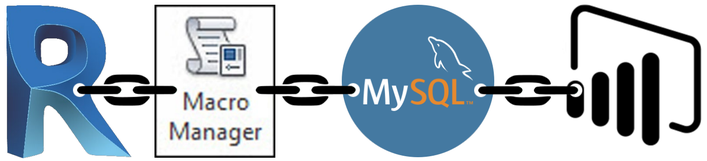
MICROSOFT POWER BI

- Transforms data into rich visuals
- Data input 100% automated
- Accessible to everyone
- Allows comparability



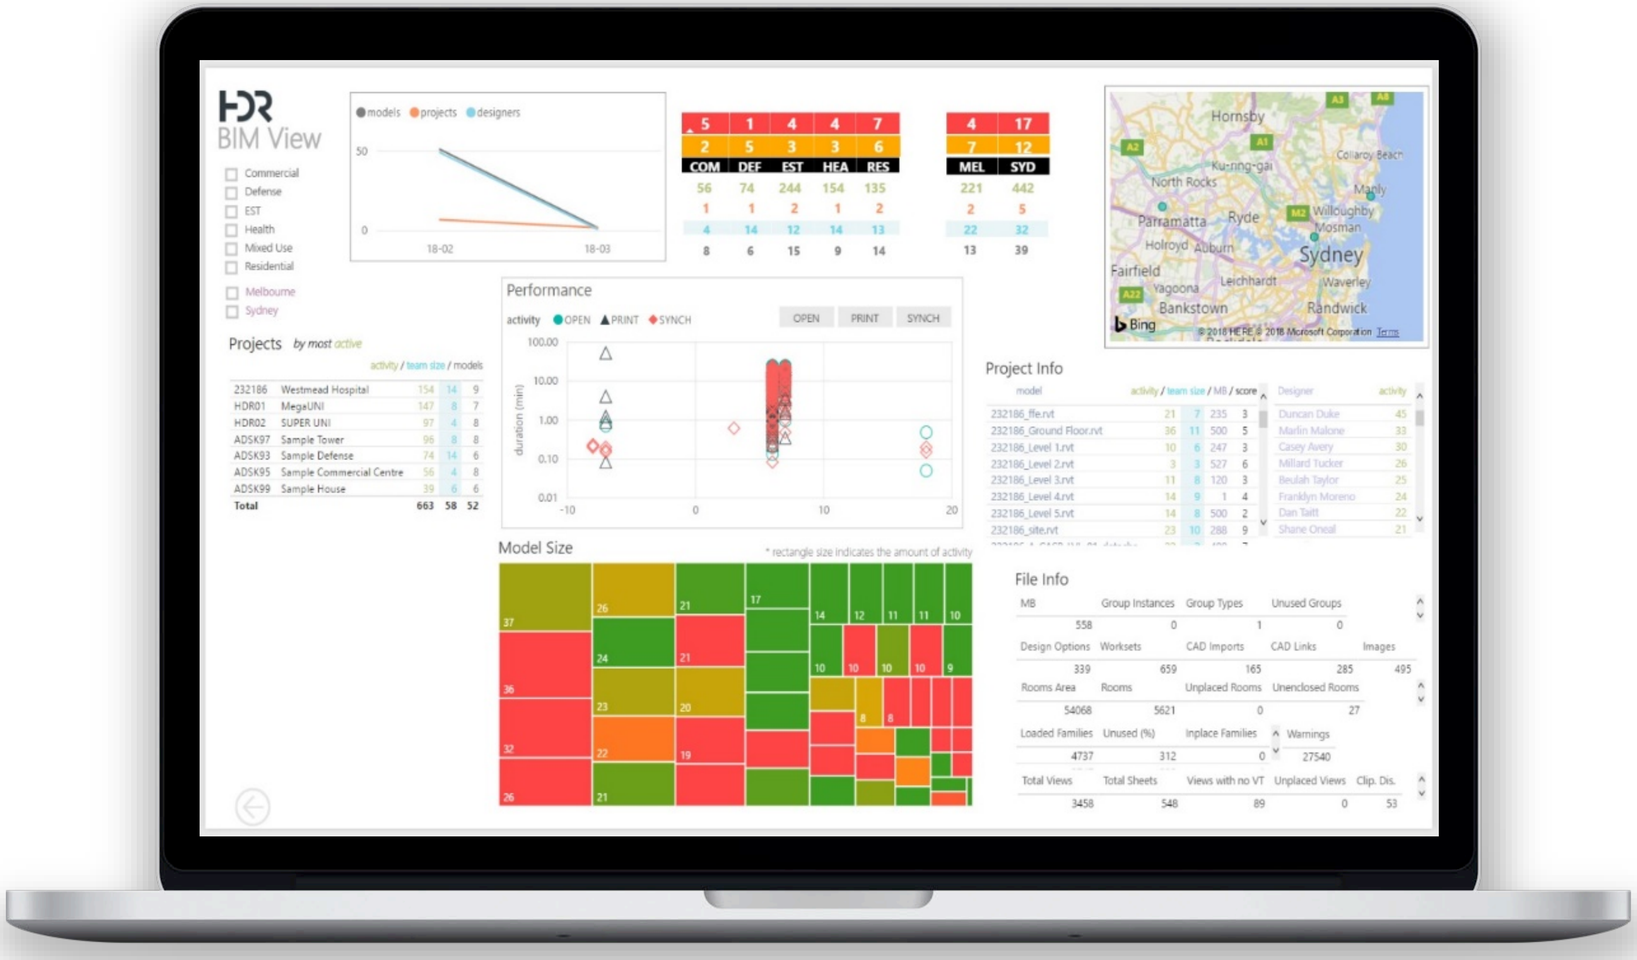


Visualising Data

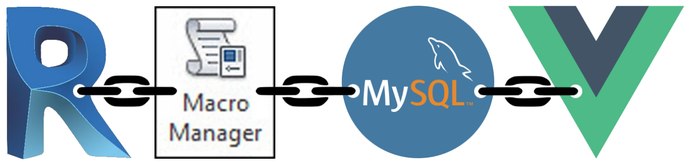


MICROSOFT POWER BI

- License costs (maintenance)
- Compatibility issues (devices)
- Needs training and support

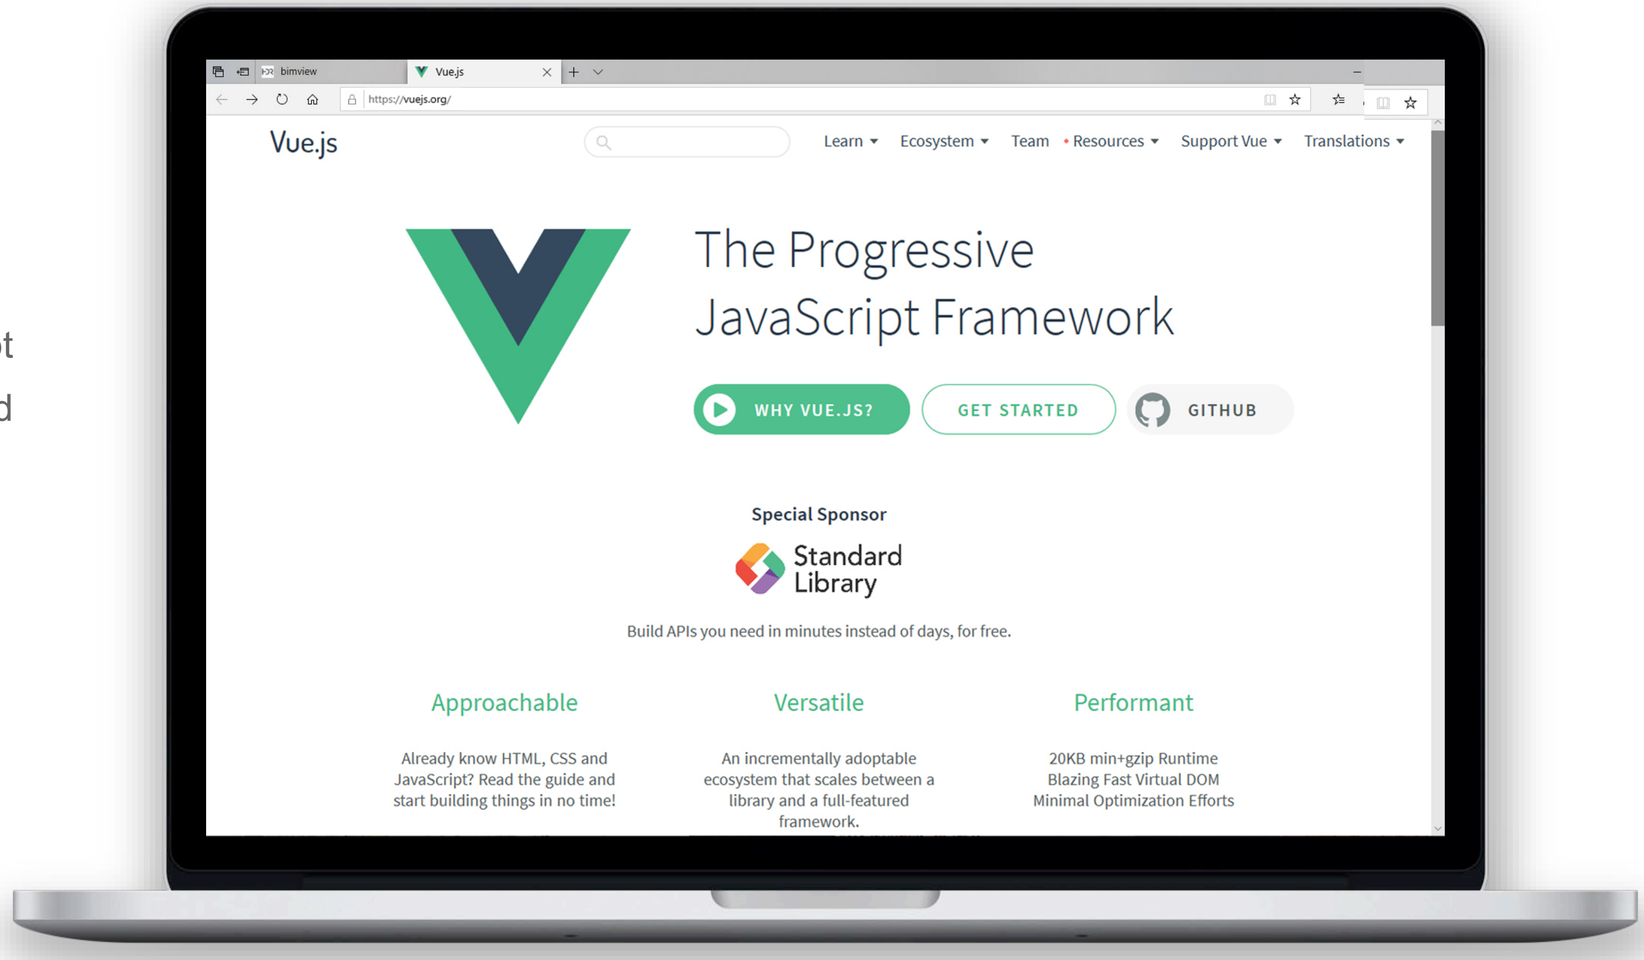


Visualising Data

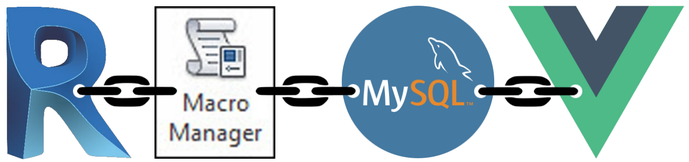


VUE – MODEL-VIEW-VIEWMODEL

Vue.js is an open-source JavaScript framework for building user interfaces and single-page applications.

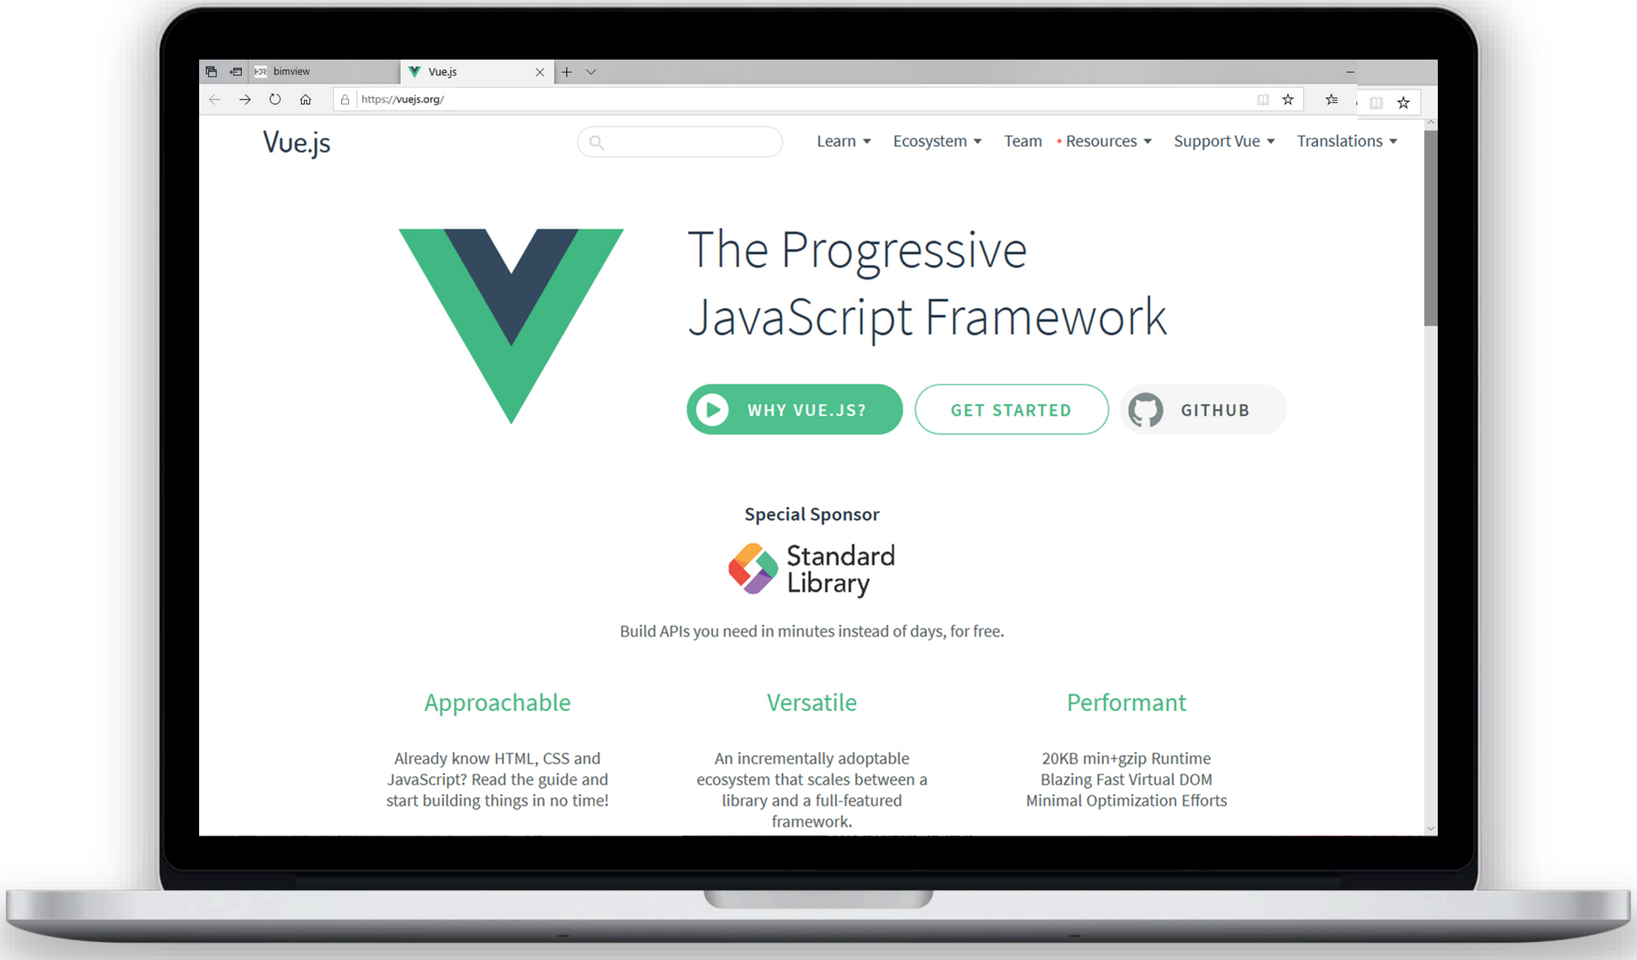


Visualising Data

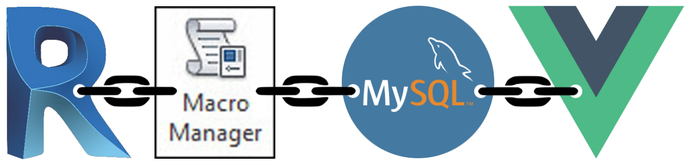


VUE – MODEL-VIEW-VIEWMODEL

- Approachable (HTML , CSS, JS)
- Performant
- Core Libraries
- Maintainable
- Re-usable Components
- Reactive



Visualising Data

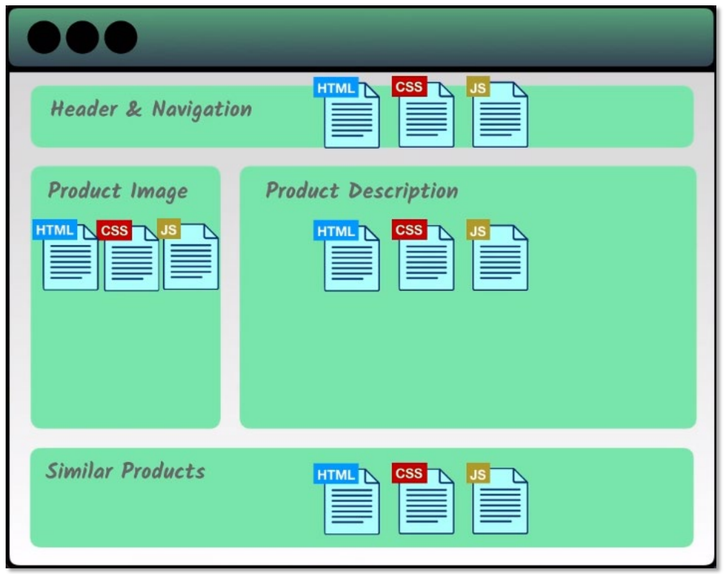


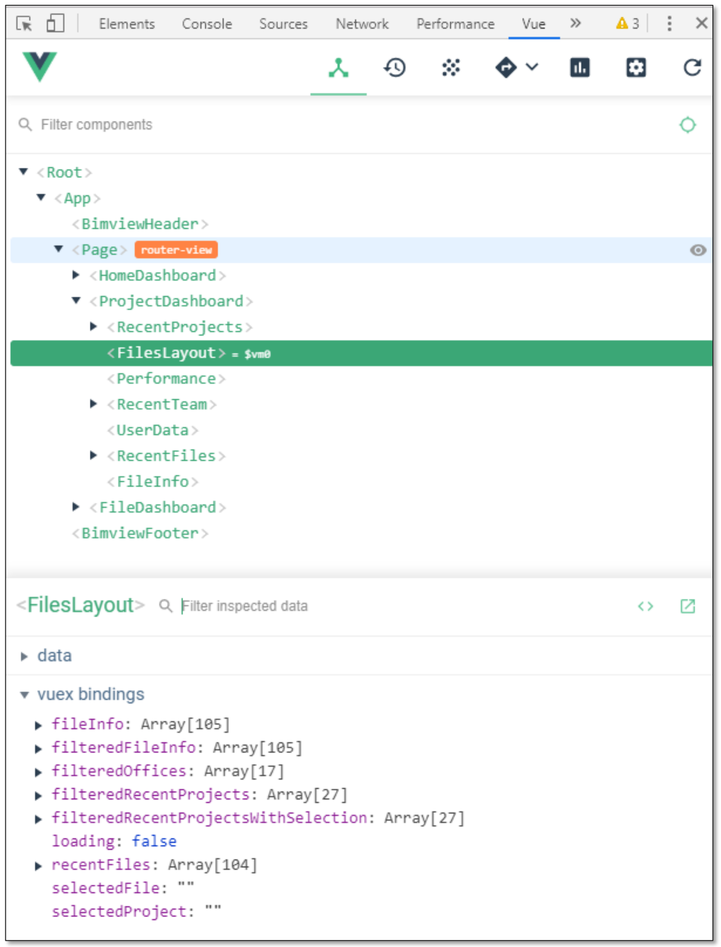
VUE – MODEL-VIEW-VIEWMODEL

HTML	 {{ project }}

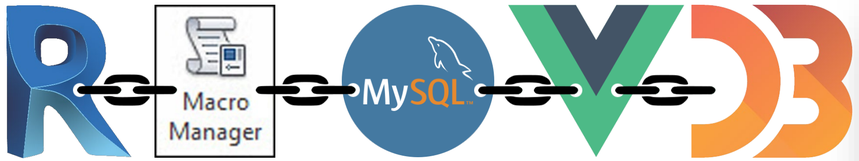
Javascript	export default {
	name: 'bimview-header',
	data: function() {
	return {
	project: 'Westmead' }
	}
	}

CSS	<style lang="scss" scoped> #name { color: #fff; } </style>





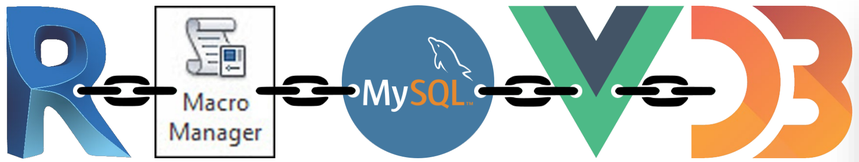
Visualising Data



D3 – DATA-DRIVEN DOCUMENTS

D3.js is a JavaScript library for manipulating documents based on data. It helps users to produce dynamic, interactive data visualizations in web browsers.

Visualising Data

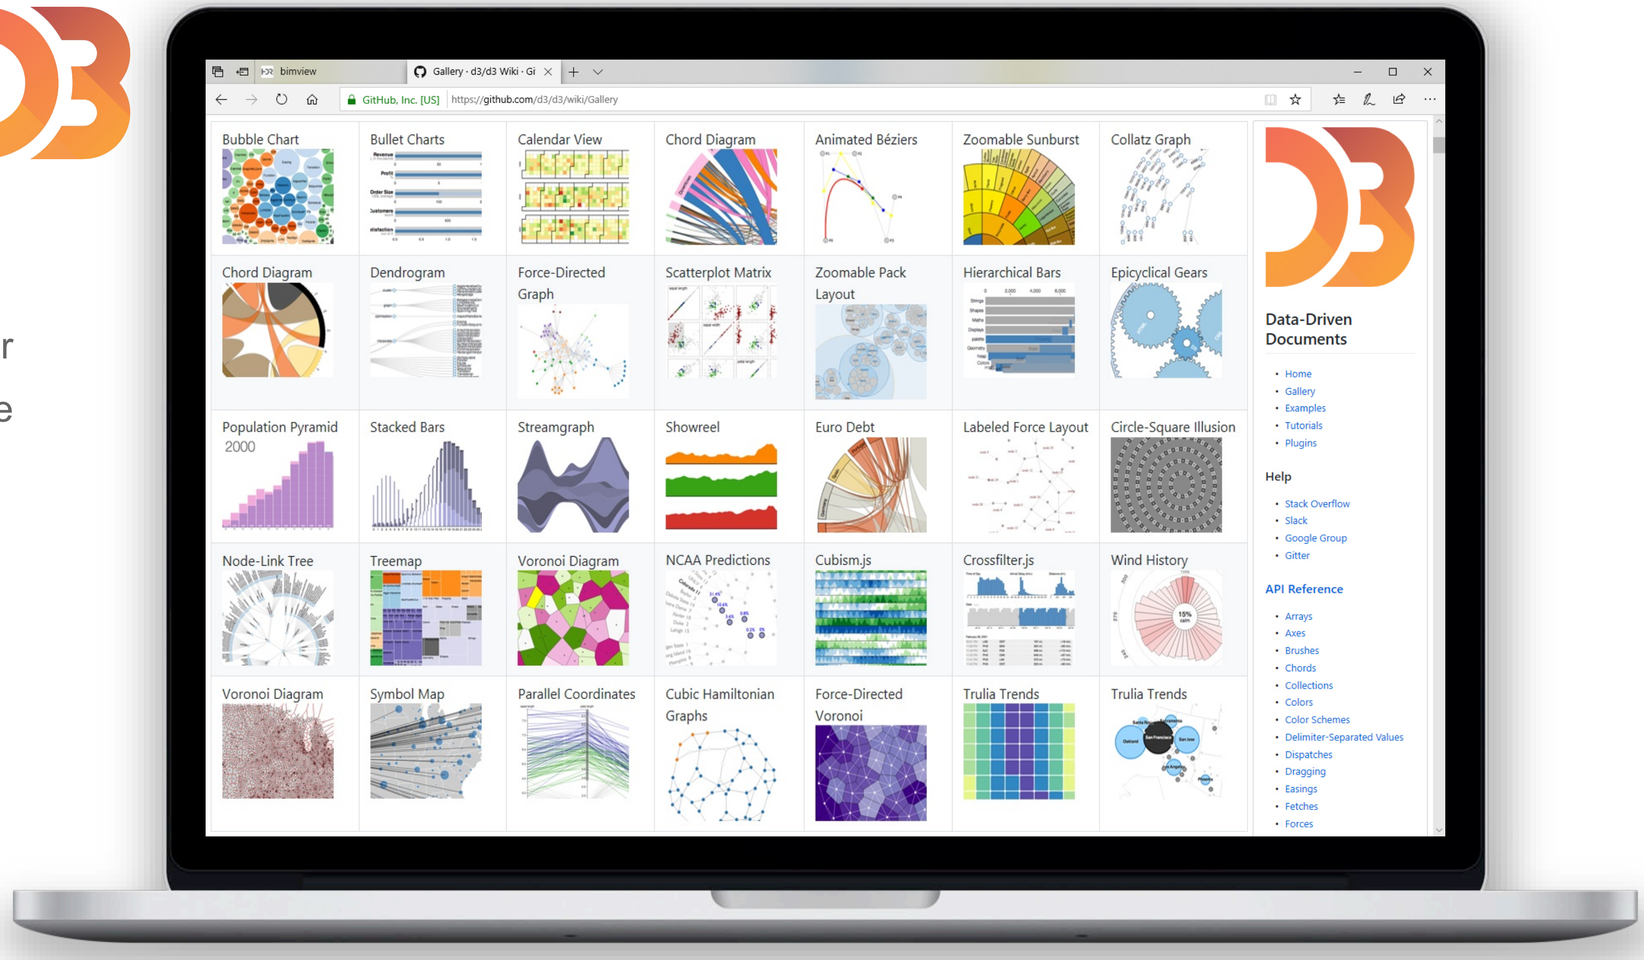


D3 – DATA-DRIVEN DOCUMENTS

D3.js makes use of Scalable Vector Graphics (SVG), HTML5 and Cascading Style Sheets (CSS) standards.

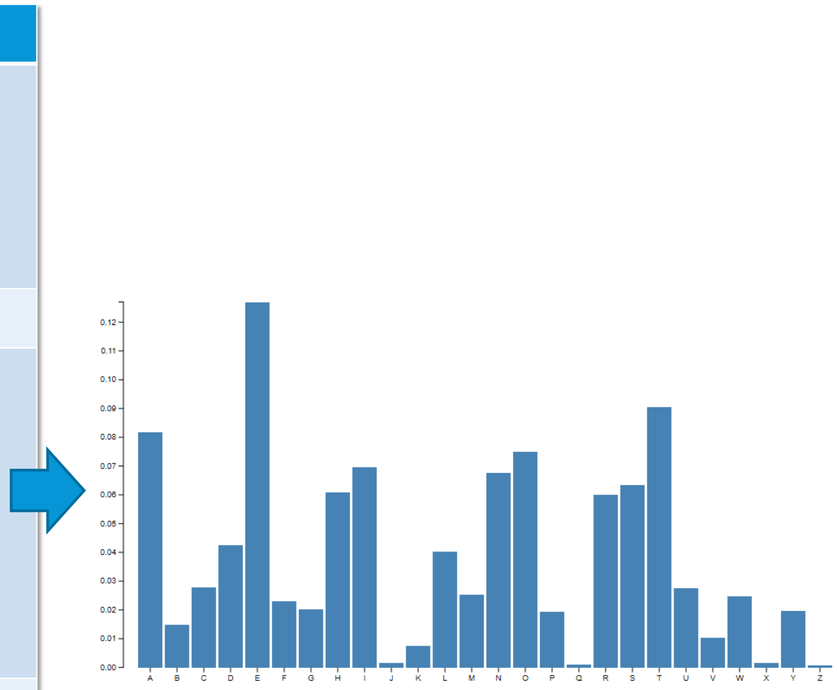
Examples:

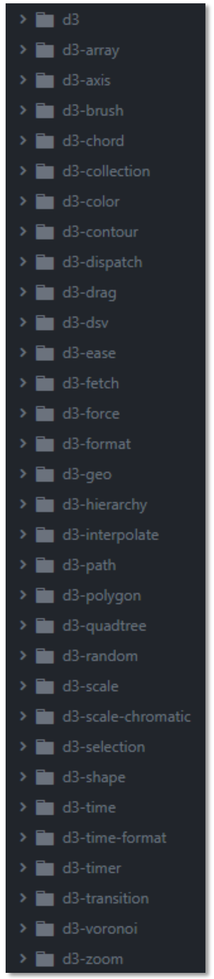
https://github.com/d3/d3/wiki/Gallery



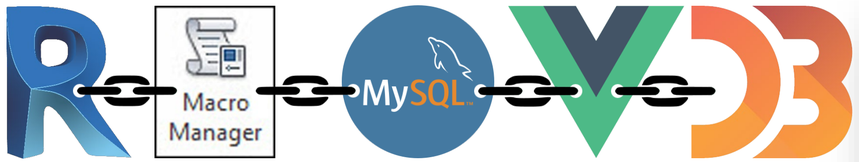
Visualising Data

Steps	Code
Create an SVG element in HTML	var svg = d3.select("body").append("svg") .attr("width", width + margin.left + margin.right) .attr("height", height + margin.top + margin.bottom) .append("g") .attr("transform", "translate(" + margin.left + "," + margin.top +)");
Load Data	d3.tsv("data.csv", type, function(error, myData) {
Set up XY Axes	x.domain(myData.map(function(d) { return ….; })); y.domain([0, d3.max(0, (myData,…)]); svg.append("g") .attr("class", "x axis") .attr("transform", "translate(0," + height + ")") .call(d3.svg.axis().scale(x).orient("bottom")); svg.append("g") .attr("class", "y axis") .call(d3.svg.axis().scale(y).orient("left"));
Iterate over data to build SVG Graphical Elements	svg.selectAll(".bar") .data(myData) .enter().append("rect") .attr("class", "bar") .attr("x", function(d) { return x(d.letter); }) .attr("width", x.rangeBand()) .attr("y", function(d) { return y(d.value); }) .attr("height", function(d) { return height - y(d.value); });



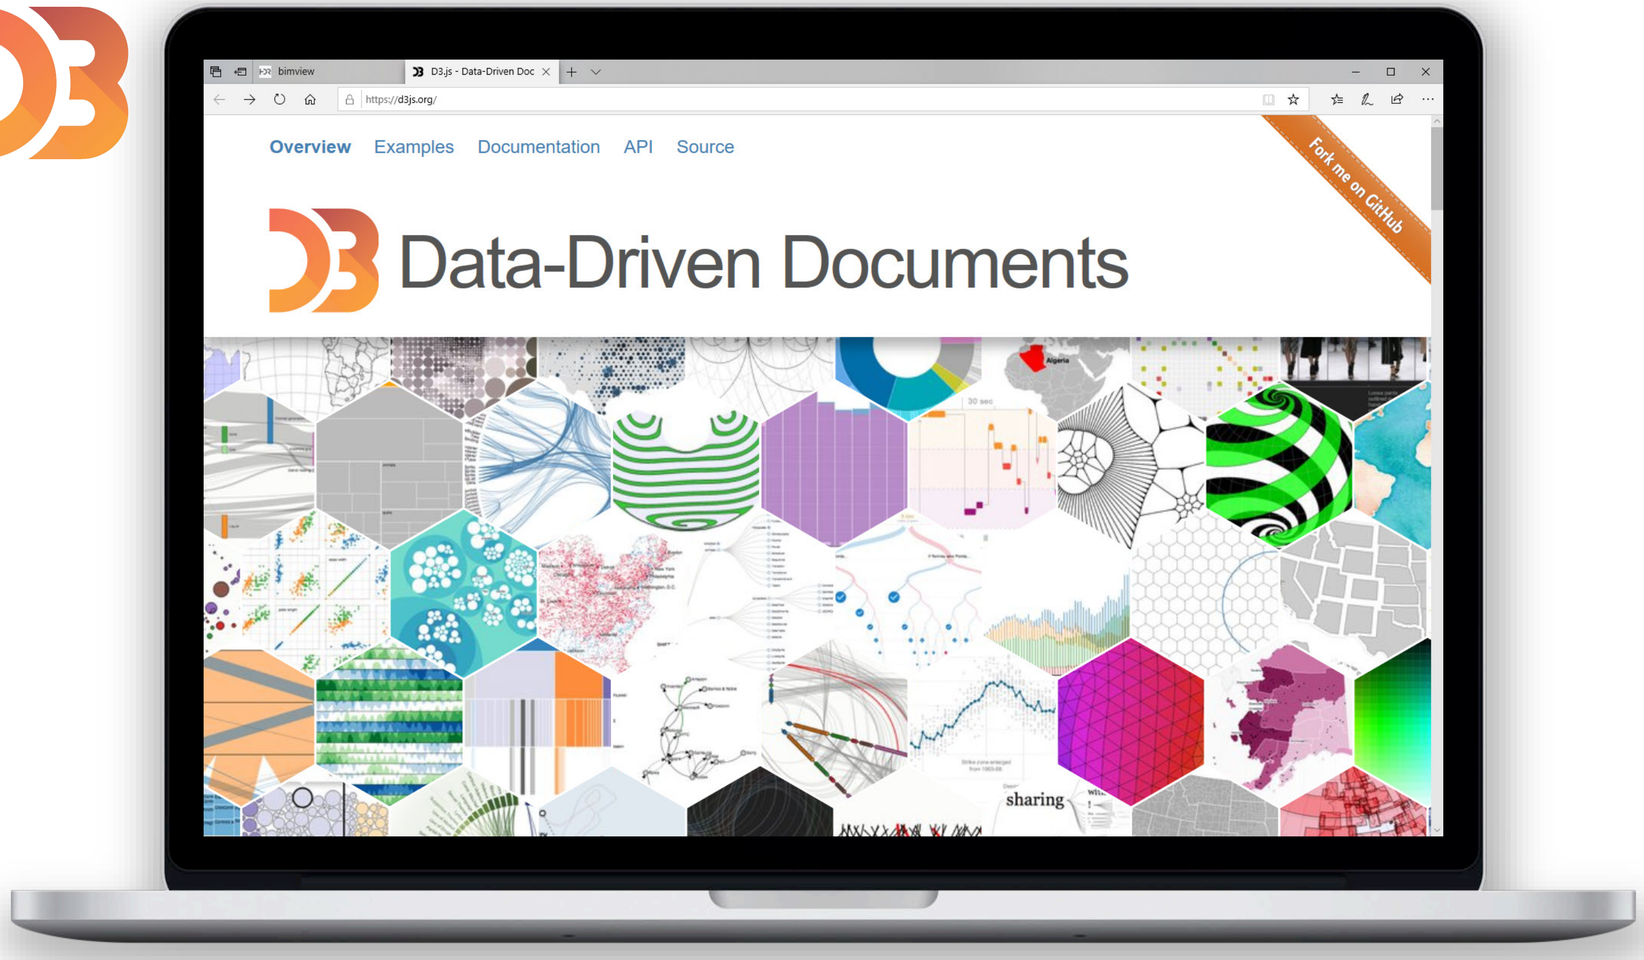


Visualising Data

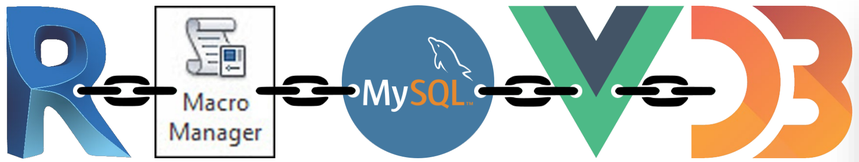


D3 – DATA-DRIVEN DOCUMENTS

- Transforms data into rich visuals
- Flexible and easy to understand
- No license costs

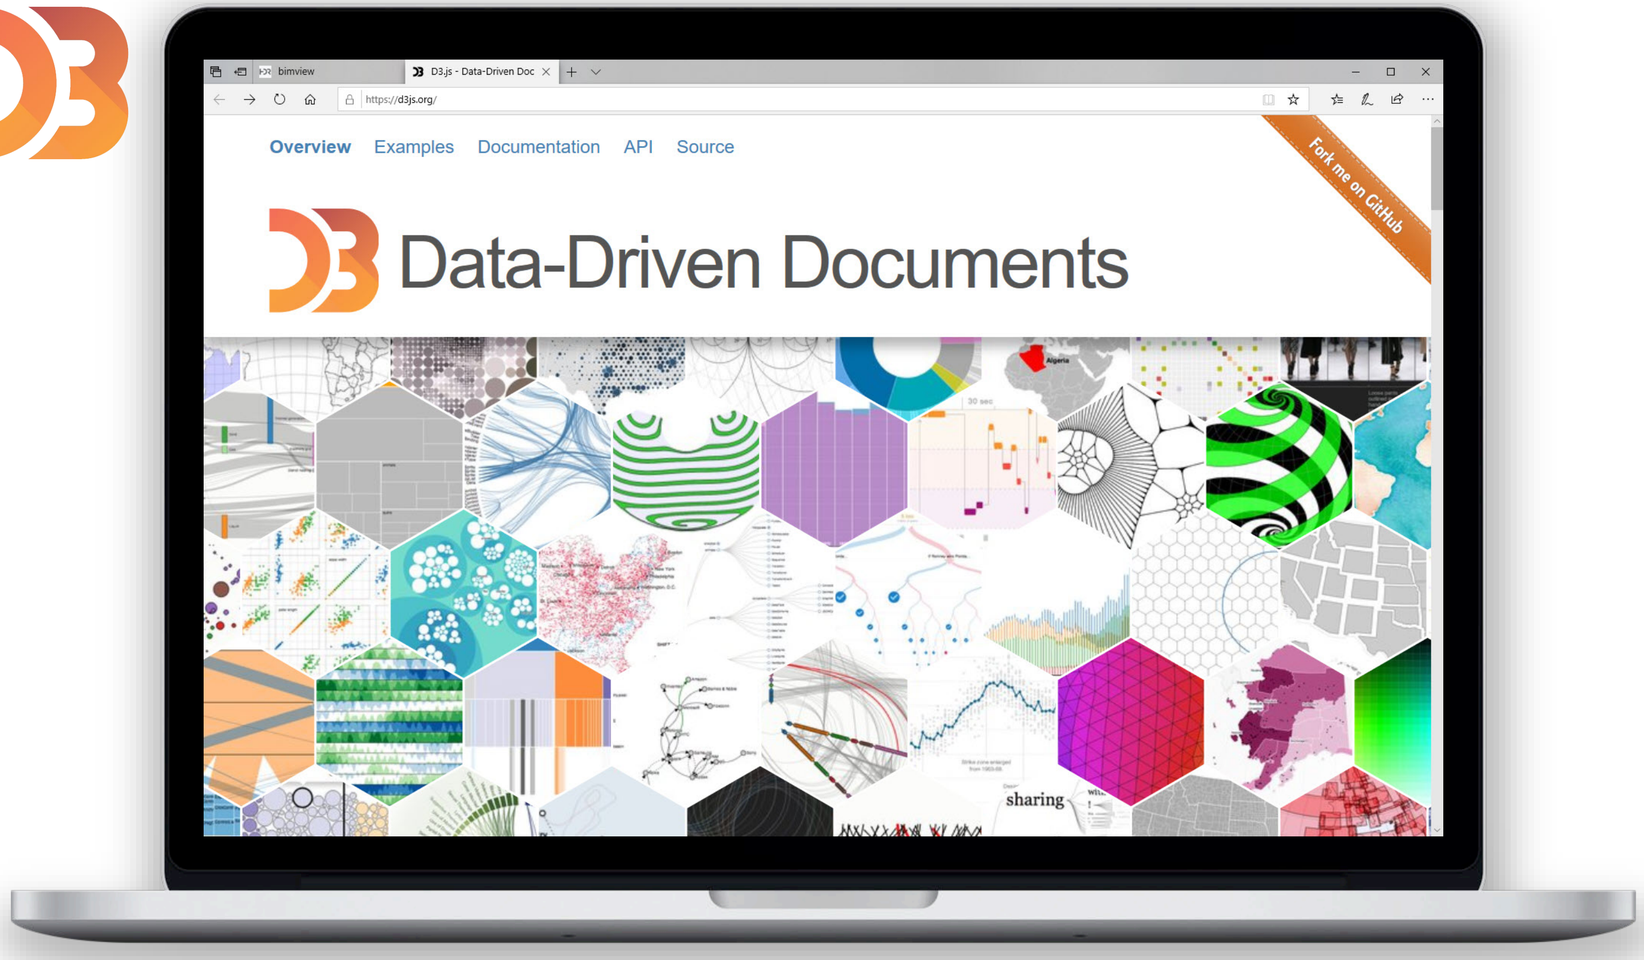


Visualising Data

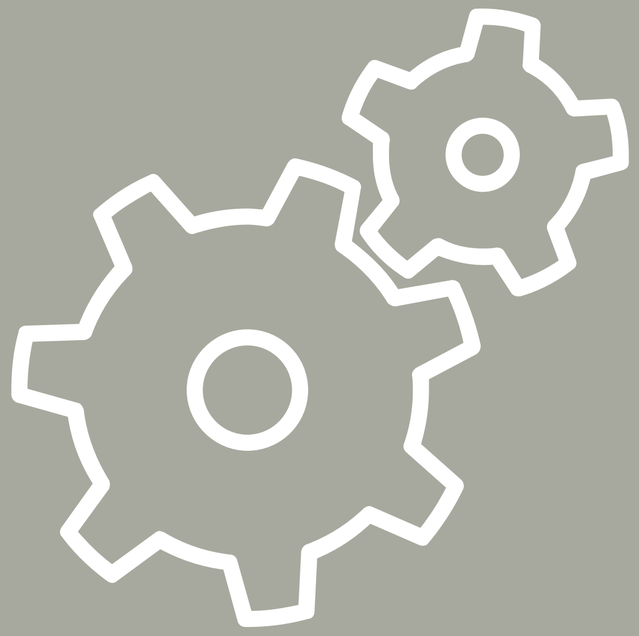


D3 – DATA-DRIVEN DOCUMENTS

- Data input 100% automated
- Accessible to everyone
- Allows comparability



Optimising



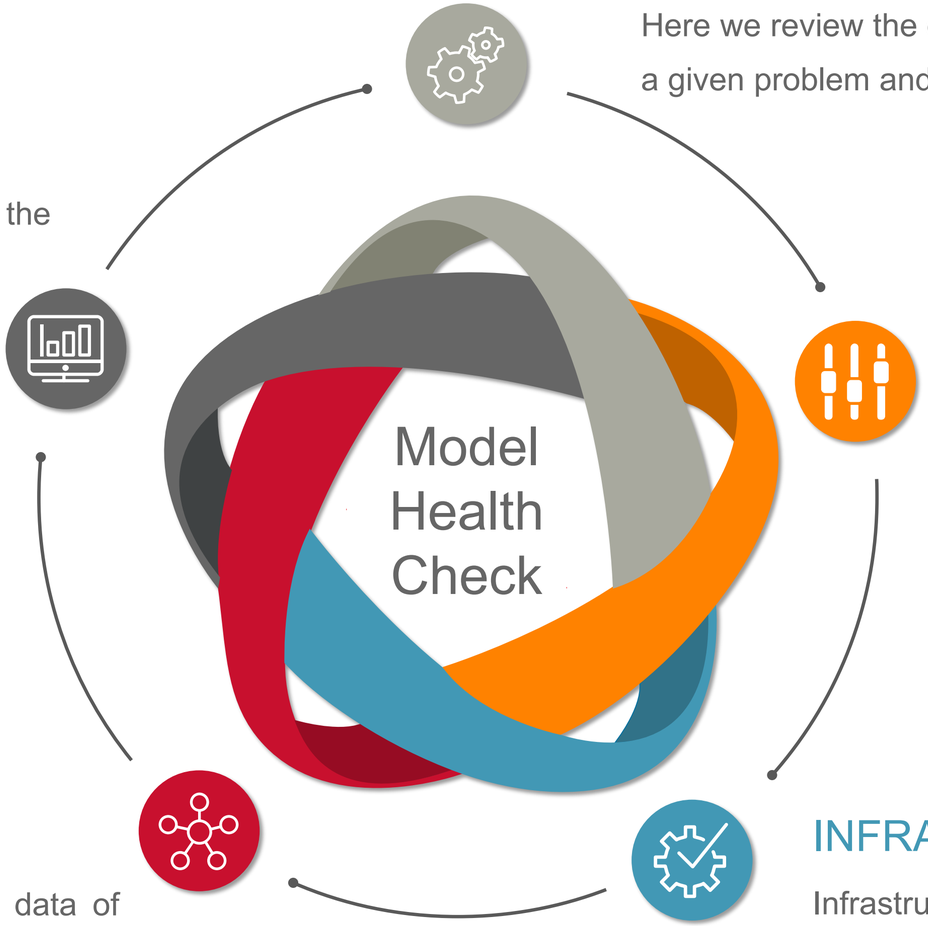
Step Five

OPTIMISING

Here we review the data that is being used based on a given problem and its rating system.

VISUALISING DATA

Visualising the data that will be used to measure the quality of your models.



DEFINING KPIS

Key Performance Indicators allow us to measure and discuss what we are trying to improve.

COLLECTING DATA

Integrating the structure and collecting the data of the individual models.

INFRASTRUCTURE

Infrastructure includes various pieces of software and is an upfront investment.

Optimising

PROACTIVE MODEL MANAGEMENT

- Projects with vs without a dedicated BIM Managers (Performance vs. Performance)
- Usage of non-approved and approved content (Approved Family Parameter)
- Improving model performance (Model Size and File Data)

Optimising

PROACTIVE SUPPORT AND TRAINING

- Comparing teams in the same sector to find our champions (Mixing High and Low Achievers)
- Providing help before a support request is being launched (Monitoring and Controlling)
- Allowing users to see the impact of their own actions in real time (Model Rating 0 - 10 (red - green))

Lessons Learned

Lessons Learned

- As a team, model health shall be everyone's responsibility – a BIM Manager alone cannot fix it all.
- The model health dashboard has to be highly visible to the Revit Users, BIM Manager and Project Leader.
- BIM Managers shall always keep an eye on the model metrics so they know when help and support is needed.
