Meet the Speakers

Nicole Boucher

Product Owner

Nicole is the Product Owner for Advanced Electrical Design for Autodesk Revit in the BIM-Electric team at Schneider Electric. She comes to this role after more than 10 years of experience working in the BIM industry, and nearly 5 years direct experience as an Electrical Designer. More recently she has achieved certification as a SAFe 5 Product Owner/Product Manager. Her role as Product Owner with SAFe-certification involves working directly with customers and development organizations to identify customer needs, writing requirements to clarify these needs, and prioritizing work in order to effectively deliver value.

April Kane

Electrical Designer

April is an Electrical Designer in Gresham Smith's Industrial Market. April has more than a decade of experience working in electrical design and BIM management. April is a key player in coordinating with electrical groups to improve workflow, quality and efficiencies by troubleshooting and utilizing best practices in Revit. Her impressive portfolio is highlighted by a variety of clients, including manufacturing facilities, hospital, labs and commercial projects. April specializes in Autodesk products and is passionate about leveraging new technologies to improve processes in electrical systems.

Summary & Conclusion

Learning Objectives

Learning Objectives

Objective 1

Identify opportunities to improve the electrical design workflow

Objective 2

Utilize Revit analytical elements to model and analyze an electrical distribution system

Objective 3

Implement a range of calculations and analysis tools that comply with code standards for system design and equipment sizing

Objective 4

Apply the methods that one company used to evaluate and adopt a new modeling workflow that reduced time spent on data re-entry

Collaborating with Gresham Smith

Gresham Smith

Gresham Smith is an architecture, engineering and design practice that provides creative solutions while genuinely caring for each other, our clients and our communities.

A close-up, black and white photograph of a woven mesh or fabric texture, showing a grid of raised, rounded squares. The texture is diagonal, running from the top-left towards the bottom-right, and is partially obscured by a solid black diagonal band that runs from the top-right towards the bottom-left.

Yesterday's Electrical Design Workflows

Escaping yesterday's workflows

Limited abilities to conceptualize and execute the electrical system design

The background of the slide features a close-up, black and white photograph of a woven mesh or fabric texture, creating a sense of depth and pattern. A diagonal black line runs from the top-left towards the bottom-right, separating the textured background from the text area.

Identify opportunities

What are the areas that need improvement within the electrical design workflow

- ✓ Are you re-entering data across multiple analysis applications?
- ✓ Do your electrical diagrams and 3D models live in different, disconnected platforms?
- ✓ Is it difficult for you to use and maintain calculation templates?
- ✓ Is it time consuming to track and implement NEC code provisions as they relate to calculations?

Introducing Advanced Electrical Design for Autodesk Revit

Alliance Partnership

Together Autodesk and Schneider Electric are driving long-term transformation in the construction industry, providing greater value to each user and contributing to solve the energy challenge.

A focus on efficiency, integration, and compliance...

THE PROBLEM

Electrical lags mechanical in BIM adoption due to **incomprehensive offerings, regional standardization fragmentation** and **disconnected processes**

THE SOLUTION

Advanced Electrical Design is a **complete electrical design in Revit** supporting **regional codes** and **standards**

40% of energy use will come from renewables by 2040. The new energy landscape, including renewables, require new digital design tools

The new solution provides **conceptual and detailed design and analysis tools, generative design capabilities** and **new energy landscape solutions**

Opportunities from Partnership

- ❑ Innovative solutions through partnership
- ❑ Developed in lock-step with Autodesk to provide an integrated, seamless experience
- ❑ A workflow defined by electrical engineers for electrical engineers

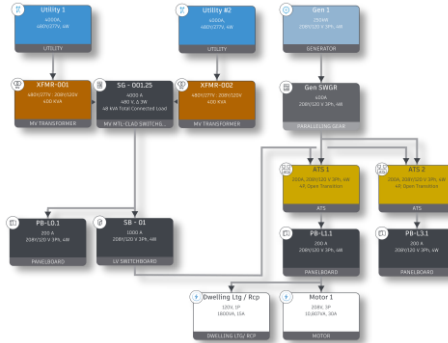

Solutions for Electrical Professionals

Three primary areas were identified based on feedback from electrical engineers

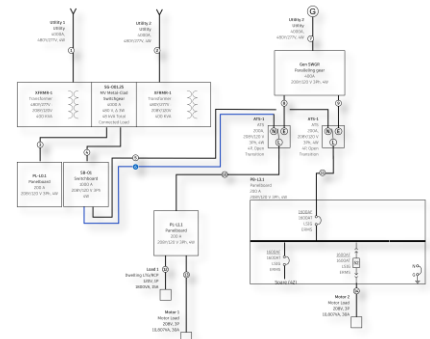

Completing the Workflow

- BIM-based electrical engineering
- Revit as the platform for design
- Generative design and layout *

Providing Essential Tools

- Load analysis and load letter
- Cable sizing and scheduling
- Intelligent diagramming
- Equipment sizing and selection *
- New Energy Landscape workflow *
- Short circuit, coordination, and arc flash *

Integrating Code Compliance

- Apply demand factors
- Automatically size cables
- Automatically size OCPD *
- View warnings and advisements *
-All per the selected NEC version

* = Future functionality

Today's Electrical Design Workflows

Adopting today's electrical design workflow

Connected workflow that supports the electrical engineer

Conceptualize and plan

in the key-line
workspace

Create a dynamically
linked single-line
diagram derived
directly from the key-
line

Use automated
NEC code-based
calculations to generate
cable schedules and

Analytical Elements

Performing Analysis

System design and equipment sizing with integrated code standards

How can Advanced Electrical Design and analytical elements facilitate electrical calculations and sizing without having to leave Revit? – Danielle the Designer

Intelligent Diagramming

As you build the diagram and supply key parameters, real-time calculations are triggered and updated

Code-based Calculations

NEC code selection drives analysis, calculations, and sizing, to simplify compliance

Customization

Define load calculation, demand factors, and override as needed

Automated Reporting

Reports and schedules include system analysis, to serve both as deliverables and means of verification

Tomorrow's Electrical Design Workflows

Advancing towards tomorrow's electrical design workflow

Collaboration with electrical design professionals is driving more innovation

Summary

Summary

Paving the way for a **new way of accomplishing** electrical distribution design and analysis process.

Alliance Partnership

- A well-planned extension of Revit capabilities
- Driving long-term digital transformation in the industry

New Ways of Working

- Better collaboration and cross-platform capabilities
- Automated calculations and analysis
- Sustainable designs across the full building lifecycle

Better Project Execution

- Win more business and shorten project timelines
- Reduce risk and errors
- Design and cost optimization
- Integrated code-based calculations
