

# **BIM-CAD-GIS Integration for Civil/Transportation Project Delivery**

**Session: C1225911**

**Presenter: Lance Parve**

Sr Design-Construction Project Engineer, BIM Coordinator  
SE Freeways Design-Construction, SE Region, Wisconsin DOT  
TRB BIM Subcommittee Co-Chairperson, ABJ95 Committee

**Date/Time: November 14, 2018 08:00-09:00 a.m.**

# Bio:

## Lance Parve, MSEng, PG, GISP

Lance works as Senior Project Design-Construction Engineer /BIM Coordinator in SE Freeways/SE Region at WisDOT. His work involves planning, design, and construction of mega/major transportation projects and also provides BIM-CAD-GIS, 3D technologies, LiDAR/integrated survey coordination, and innovation support. Lance has over 27 years of industry experience - 12 public sector transportation/municipal and 15 private sector consulting - involving successful digital project delivery in civil infrastructure planning, design, and construction. Lance serves at TRB as Co-Chairperson of the BIM-CIM-VDC Subcommittee of ABJ95 Committee and also on the Steering Committee of the IICTG-International Intelligent Construction Technologies Group. He has a MS Engineering degree, MS Certificate Urban Planning GIS degree, and a BS Geological Sciences degree from the UW-Milwaukee.

# Southeast Region

- Our region:

- 2,621 Sq. Miles
- 64 towns
- 57 villages
- 32 cities
- Population: 2 million+
- 1.7 million vehicle registrations
- 1,078 bridges
- 40% of statewide transportation program
- 42% of the state's senators

# Presentation Agenda

- BIM and Project Delivery at WisDOT SE Freeways
- Technology and Innovation Implementation
- Benefits, Return on Investment and Challenges
- GIS and Asset Management at WisDOT SE Region

# Learning Objectives

- To leverage BIM Technologies for Project Delivery
- To implement Project Execution Plans (PxP) for BIM
- To address Challenges to deploy BIM
- To integrate GIS, BIM and CAD for Asset Management

# BIM for Infrastructure In Digital Project Delivery

## FHWA and BIM for Infrastructure

- FHWA promotes use of BIM concepts and other transportation innovations through its Every Day Counts (EDC) initiatives...  
“...proven but underutilized innovations...”
- WisDOT has become a DOT leader in 3D model-based planning-design-construction in digital project delivery and asset management

# BIM for Infrastructure In Digital Project Delivery

## BIM for Infrastructure

Building Information Modeling (*BIM*) involves the *People, Processes, and Technology Products* generating the digital, integrated, multi-disciplinary, collaborative representation of physical and functional characteristics (*Information Models*) throughout the Lifecycle planning, surveying, engineering, constructing, operating, and maintaining of Transportation Infrastructure Facilities included in *Project Delivery and Asset Management*.

# Cost Savings vs. Cost Avoidance

**Cost Savings** - reduction in the cost of an item or service compared to the price paid previously or budgeted in the current fiscal year. Savings should generally be tangible. (e.g. elimination of a contract, negotiation of a lower rental fee for facilities/equipment, reduction in construction change order, etc.)

**Cost Avoidance** - expenses that have not yet been incurred. (e.g. reduction of a proposed price increase from a vendor, preventative maintenance, reduction in design of a future construction issue such as a hard clash, etc.)

## Project Life Cycle

Source: David Esse, WisDOT, 2015, Graphic Modified

# BIM for Infrastructure In Digital Project Delivery

## WisDOT SER-SE Freeways and WisDOT DTSD Projects

WisDOT Investment \$18.4B over last 12 yrs

11,800 mi STH Rds/4,900 Bridges +/-; 110,400 mi Local Rds/8,800 Bridges +/-

- Marquette Interchange (I-43, I-94, I-794)  
(2004 - 2008)
- I-94 N-S/Mitchell Interchange  
(2009 - 2012)
- Hoan Bridge/Lake Freeway (I-794)  
(2013 - 2015)
- Zoo Interchange (I-41, I-94, I-894)  
(2012 - 2018)
- I-94 N-S/Foxconn  
(2018 - 2020)

# Historical Background

## Marquette Interchange

\$750M

- Pockets of Institutional Experience
- Silos of Information

## Zoo Interchange

\$1.76B

- Scalable
- Industry Buy-in
- Trust Component

## I-94NS / Mitchell Interchange

\$1.91B

- Cultural Change
- Size / PS&E Process
- Resources / Time Management

# Design-Construction Goals: BIM

- Build On Time
- Build within Budget
- Build with highest Quality
- Build Safely
- Build with Community Involvement
- Build with Traffic Routes for Businesses

# Zoo Interchange 2012-2018

## Project Location/Overview

- Adjacent to the Milwaukee County Zoo
- Junction of I-94, I-894 and I-41/US 45
- 350,000 vehicles/day
- 60,000 jobs in the corridor
- \$1.7 Billion project
- 3<sup>rd</sup> Wisconsin Mega Interchange project

# Project Location/Overview

- 50 PS&E Deliverables
  - 9 miles of freeway
  - 12 miles of arterial roadways
- Real Estate - 455 parcels (4 Plats)
- Utility relocations
  - 325+ Permits Issued
  - \$100M+ compensable
- Railroad Coordination
- Highlights
  - 73 bridge structures
  - 108 retaining walls
  - 31 noise barriers
  - 115 sign structures
  - 1.94 million CY common excavation
  - 107,000 CY concrete pavement
  - 3D BIM for all Disciplines throughout Zoo IC Design-Construction

# Design & Reconstruction of the Zoo Interchange

- The Zoo Interchange is the **oldest** and **most heavily traveled** interchange in the state
- Outdated design - results in safety and congestion issues
- Closely spaced service interchanges
- Combination of left- and right-hand entrance and exit ramps
- Weaving across multiple lanes in a short distance

# Existing Zoo Interchange

# New Zoo Interchange

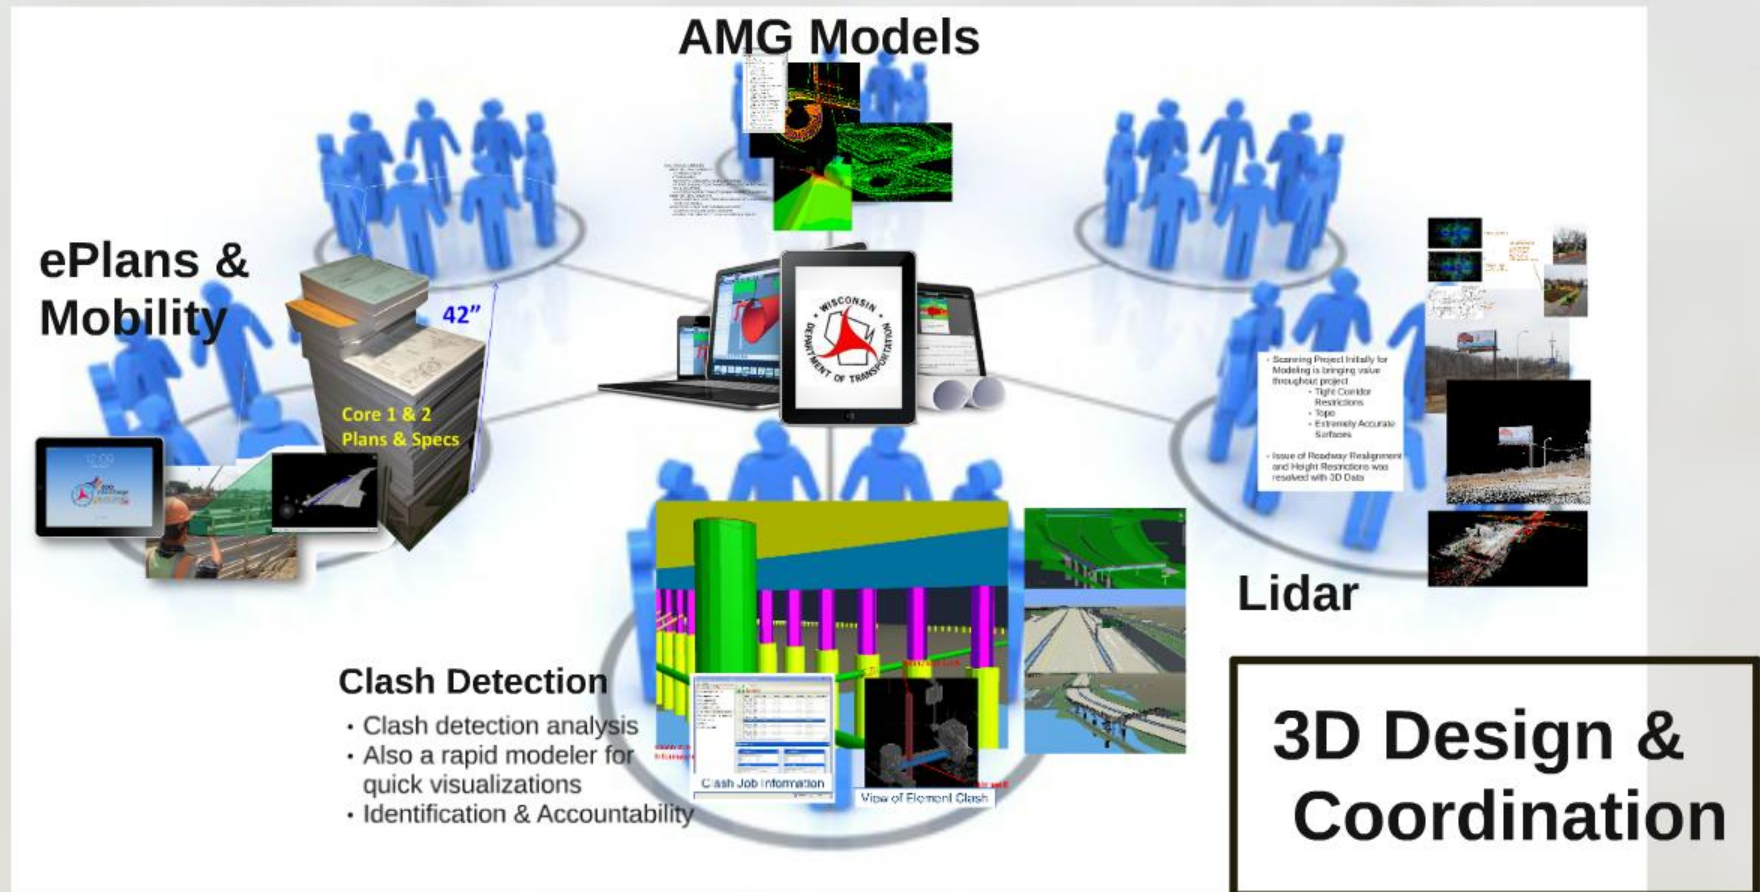

A 3D view of the planned Zoo Interchange core – looking northeast

# Model-based Data-centric BIM in Project Delivery

# Technology is Motivating the necessity for Change

## Q&A

- What are some of the challenges we face as an industry to deploy BIM for Project Delivery?
  - Plan-centric and DBB vs DB vs alternative contracts
  - Technologies Data Interoperability
  - Data centric, IT and Data Storage
- Managing change in delivering projects
  - People
  - Processes-workflows
  - Products-PS&Es, D-C Deliverables, Data

# BIM for Infrastructure In Digital Project Delivery

# Model-based BIM Design: Keys to Success

- Right-size and Adapt BIM to Project (Mega, Major, RRR, HSP, Local)
- Collect High-Res Reality Capture Integrated Survey (LiDAR, etc)
- Model 3D, 4D, xD All/Majority of Disciplines
- Deploy Automated Clash Detection
- Visualize Data for Design Accuracy
- Conduct Collaborative Design-Construction Plan Reviews
- Improve the Quality of the Bid Documents for Lower Bids
- Track Project Issues
- Integrate BIM-CAD-GIS data

# Model-based BIM Construction: Keys to Success

- Enhance PS&E Review
- Provide Dedicate Design Liaison
- Adopt E-Construction Practices
- Visualize Data for Construction
- Provide Digital Asbuilt Plans/Models
- Reuse Data/Digital Data Exchange
- Deploy Cloud-based Data Repository
- Integrate of CAD-BIM-GIS Data
- Track Project Issues

### Feedback Metrics

### Additional Value: Feedback to Design

Leveraging Project Feedback to implement Regional & Statewide Change

- **Currently 70 FBTDs**
- **Southeast Freeways Design Manual 50 FBTDs**
- **Statewide Facilities Development Manual 3 FBTDs**

# INCORPORATE STEP 4

# Dedicated Design Liaison

- Post-Design Support
- Involved and Engaged throughout Construction
  - Attend Project Meetings
  - Respond to RFIs/DINs
  - Minor Re-Design to Adjust to Field Changes
- Issue Resolution and Timely Decision Making

**Transparent Collaboration** = **Effective Issue and Risk Mitigation** = **Cost Savings**

# Use of BIM in Construction

- Complexity
  - Unique Construction Elements
  - Staging/Access
  - Traffic Management
- Aggressive Construction Schedule
  - “Burn” Rate = \$1.2 million per day  
(Fall 2016)
- 3,711 issues on project to date

# 3D Model Visualization

## 3D Engineered Models in Construction

# Use of BIM in Construction

- Automated Machine Guidance (AMG)

- 2D contract documents
- 3D model provided for reference
- Model updates during construction

# Use of BIM in Construction

## Mobile Inspections Software - Punchlist (BIM 360/Bluebeam)

The collage illustrates the integration of BIM and mobile inspection software in construction. It features several screenshots of software interfaces, a construction worker, and various devices.

**Software Screenshots:**

- Top Left:** A screenshot of the "WisDOT Zoo Interchange - Punchlist" interface. It displays a table of "Noisewalls (78 issues)" with columns for Pin, Issue ID, Description, Location Detail, Status, Company, Type, Date Created, and Due Date. Below the table is a map showing the location of the issues.
- Top Right:** A screenshot of the "1060-33-80 Noisewall Punchlist by Location Issued - DRAFT" interface. It shows a detailed view of a specific issue, including a photo of the noise wall and a table of "Noisewalls (78 Issues)".
- Bottom Left:** A screenshot of the "1060-33-80 Noisewall Punchlist by Location Issued - DRAFT" interface, showing a detailed view of a specific issue, including a photo of the noise wall and a table of "Noisewalls (78 Issues)".
- Bottom Center:** A screenshot of the "1060-33-80 Noisewall Punchlist by Location Issued - DRAFT" interface, showing a detailed view of a specific issue, including a photo of the noise wall and a table of "Noisewalls (78 Issues)".
- Bottom Right:** A screenshot of the "1060-33-80 Noisewall Punchlist by Location Issued - DRAFT" interface, showing a detailed view of a specific issue, including a photo of the noise wall and a table of "Noisewalls (78 Issues)".

**Construction Worker:** A photograph of a construction worker wearing a white hard hat and a high-visibility yellow vest, standing next to a large concrete wall.

**Devices:** A laptop, a tablet, and a smartphone are shown at the bottom right, displaying the software interface. The tablet screen shows the "WISCONSIN DEPARTMENT OF TRANSPORTATION" logo.

# Use of BIM in Construction

- Full time 3D Model Technician on CEC team
  - Staging changes/sequencing
  - Interface with utilities
  - Grading changes/blending slopes
  - EBS
  - Adjusting noise barrier alignments
  - Temporary overhead lighting clearances

- 84<sup>th</sup> Street lane restrictions winter 2013-14
- Kearney closed nine months
- Temporary 76<sup>th</sup> Street ramp
- 76<sup>th</sup> Street bridge closed for six months
- Detours to use 68<sup>th</sup>/70<sup>th</sup> Interchange

# 2014 – WIS 100 Interchange

Final Cost: \$75.7M  
Changes: 3.23%  
Labor: 238,334 hrs

# New Union Pacific Railroad Bridge over I-94

# 2014 – Watertown Plank Road

Final Cost: \$68.1M  
Changes: 1.97%  
Labor: 316,402 hrs

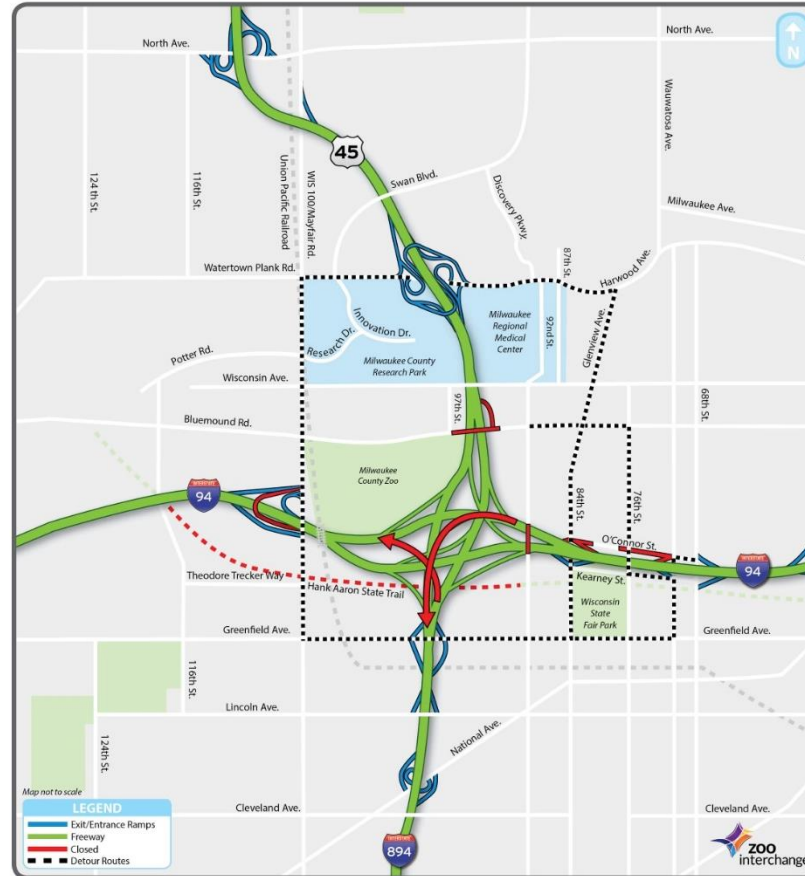

# Watertown Plank Road U-Ramp tub girders being set

# Core 1: Fall 2014 – Spring 2016

- LET = \$198M
- Wisconsin Constructors II
  - Michels
  - Lunda
  - Edgerton

Final Cost: \$206.2M

Changes: 3.75%

Labor: 772,864 hrs

# Core 1 – May 2015

# Core 2: Fall 2015 – Summer 2018

- LET = \$302.2M
- Walsh Construction
- Changes = 4.05%

# Core 2: 2015 – 2018

# Core 2 – 96" Storm Sewer

# Core 2: 2015 – 2018

# Core 2: Fall 2015 – 2018

# SE Freeways: Conclusions on ROI-BIM

- Earlier Clash Detection/ Resolution of Construction Discipline Interface Conflicts, Multi-disciplinary Collaboration
- Improved Existing Conditions Accuracies with 3D Integrated LiDAR Surveys
- Visualization, Simulation, 3D-4D Staging, AR/VR-Pilot
- Improved Quality of Design Plan Sets/Bid Docs / Enhanced PS&E Review
- e-Construction Real-time Field Construction Management (GPS Hand-helds/Rovers)
- Verification with 3D Models 3D to 4D Schedules-Pilot
- Contract Modification Costs significantly reduced by using BIM

# SE Freeways: Summary on ROI-CIM

(Zoo IC CBA-ROI Final Report in 12/2018)

- I-94 N-S Program Changes (4.5%) vs (\$26.93m / \$806.85m) Zoo IC Program Changes **3.43%**
- Complex Project Changes (e.g I-94 N-S) typically range from 5%-9% (+/-)
- Zoo IC Core 1 Contract is complex and Changes are **3.75%** (\$7.45m / \$198.77m)
- Zoo IC Core 2 Contract is complex and Changes are **4.05%** (\$10.42m / \$302.20m) and **1.62%** excluding a \$5.52M Cost

# SE Freeways: Summary on ROI-CIM

(Zoo IC CBA-ROI Final Report in 01/2019)

Zoo IC Project	Contract \$	CO \$	CO %
• Core 1 System IC	206.2m	7.5m	3.75%
• Core 2 System IC	305.8m	10.4m	4.05/1.62%
• Mayfair Rd (STH 100)	36.4m	0.4m	1.17%
• Watertown Plank IC	68.1m	1.3m	1.97%
• Swan Blvd-Bridge	12.3m	0.5m	3.77%
• UP RR-STH 100 Bridge	75.7m	2.4m	3.23%
• Bridges (6)	62.5m	0.9m	1.47%
• Total (includes next slide)	822.3m	25.3m	3.43%

# SE Freeways: Summary on ROI-CIM

(Zoo IC CBA-ROI Final Report in 01/2019)

Zoo IC Project	Contract \$	CO \$	CO %
• I-94/I-894 Aux Lanes	16.3m	0.7m	4.05%
• Local Roads/Other	11.0m	-.01m	-0.07%
• Adj Facilities	12.6m	1.0m	8.10%
• Traffic Mitigation/TMP	15.4m	0.2m	1.53%
• Total (includes prev slide)	822.3m	25.3m	3.43%
• Adj Streets-Bridges (9)	26.8m	1.4m	5.46%

## Q&A

- How can we reuse CAD and BIM data for asset management?
- How can we integrate BIM-CAD-GIS data?
  - ArcGIS
  - AGO
  - SDE
  - ArcGIS Connector (New)
  - Smart Cities, Smart Transportation Corridors

# Asset Management (GIS) Deliverables

- 2,818 miles of highway
- 125+ GB of data analyzed
  - SERGIS: 6 GB
- 33,000+ files
- 50+ layer files
- 100+ scripts
- 32 map templates
  - 4 sizes
  - 7 counties plus Region
- ArcGIS Online

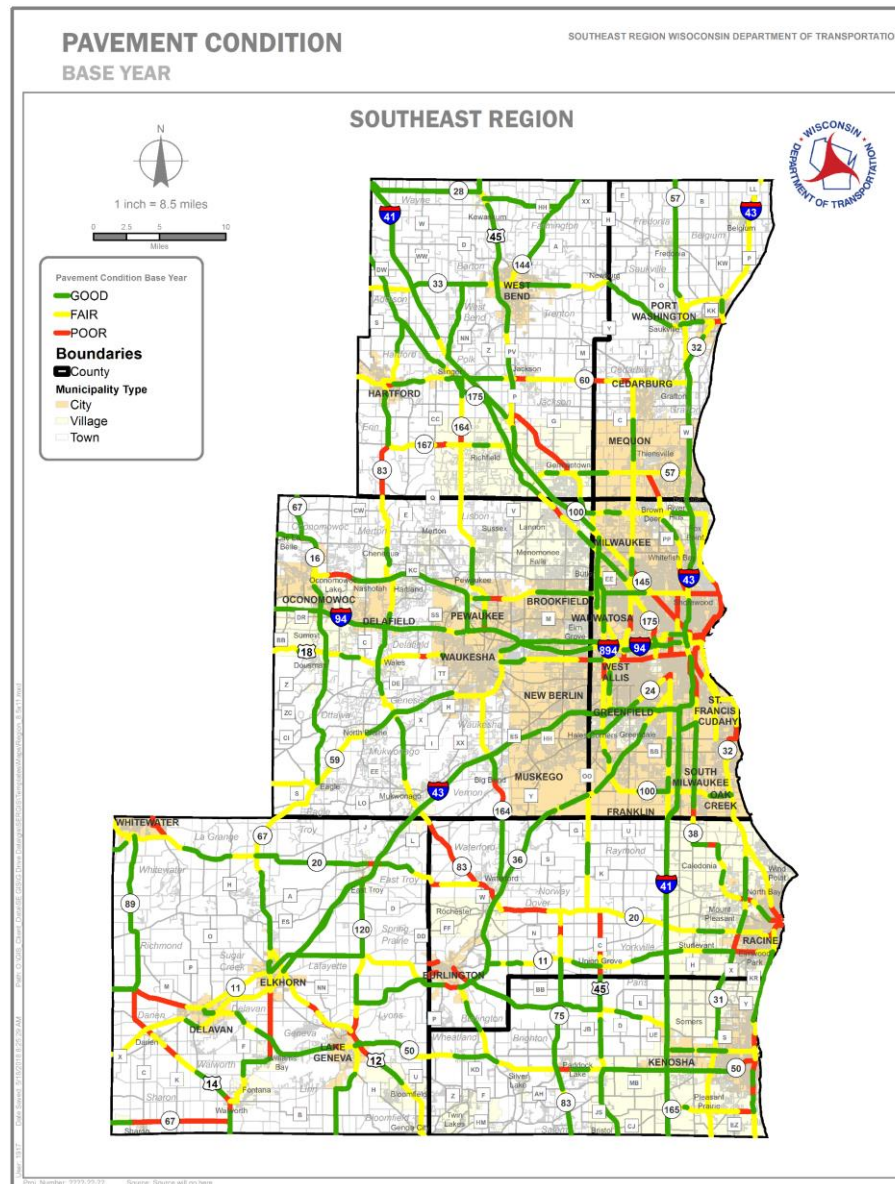

# Asset Management (GIS)

## Data Layers

SERGIS Data Layer Tracking															
Interdependent Data		Meta-Manager Data		External Data		Data Steward		Empty Supporting documents		Deliverable Tier (Target Date) 1= 1/19/2018 2= March 2018 3= June 2018		Assignment (who is responsible for completing immediate next steps of data layer)		Status (Active, Not Active, Complete, On Hold)	
Index ID	Layer/Datasets Used/Needed	Data Type	Data Dicto	Data Price	R = Region C = County R&C	Spatial Feature Name	Layer File Name	Assigned Consultant							Next Steps
19	Construction Map Data	Line	X	X	R			GRAEF	3	WisDOT	Not Active	(Completed steps and history of next steps is being stored in the comments)			
20	Zoning	Polygon	X	X	C	MKE_Parcels_with_Property_Information_20171011; RacineParcelDownload_20171003	MILWAUKEE_ZONING.lyr; RACINE_ZONING.lyr	GRAEF	1	WisDOT	On Hold	Investigating data source. Construction map data is derived from an application. Data and outputs stored on the network. Determining if data is derived from improvement project data or if we will need to create a new feature class to house the data.			
21	PLSS Section/Qsec (SEWRPC)	Line	X	X	R	PLSS_QTR_SECT_SEWRPC_POLY; PLSS_SECT_SEWRPC_POLY	SEWRPC_QTR_SECT_POLY.lyr	GRAEF	1	Consultant	Complete	Data Dictionary updated with DOT field names - only Racine and Milwaukee county had zoning data available. Layer files were created for these two counties			
22	Section Corners (SEWRPC)	Point	X	X	R	PLSS_SECT_CNR_SEWRPC_PT		GRAEF	1	Consultant	Complete	No data dictionary and process			
23	Wetlands - ADID (SEWRPC)	Polygon	X	X	R	various names		DAAR	1	Consultant	Complete	Investigation of Zoning data. data layer exist from Statewide parcel initiative but does not cover all			
24	Land use (SEWRPC)	Polygon	X	X	R	LDU_2010_SEWRPC_POLY	LAND_USE_2010.lyr	GRAEF	2	Consultant	Complete	This may change in the future. In the interim counties may be the best reliable source for consistency			
25	Land use (Future) (SEWRPC)	Polygon	X	X	R	LDU_2035_SEWRPC_POLY; LDU_2050_SEWRPC_POLY	LAND_USE_2035.lyr; LAND_USE_2050.lyr	GRAEF	2	Consultant	Complete	Data Dictionary updated with DOT Field Names			
26	Existing & Proposed Trails (SEWRPC)		X	X	R			DAAR	1	Consultant	Complete	We will utilize SEWRPC trail file that was assembled for Vision 2050. This data has both current and trails. The definition of the file are off street (this does not include on street accommodations).			
27	Environmental Corridors (SEWRPC)		X	X	R			DAAR	1	Consultant	Complete	Data Dictionary updated with DOT Field Names, Aliases & Descriptions			
28	Topo/DTM	Polygon	X	X	C	TOPO_DTM_WDOT_POLY		GRAEF	2	Consultant	Active	Data Dictionary updated with DOT Field Names, Aliases & Descriptions			
29	Historical Sites (NRHP)		X	X	R			GRAEF	2	WisDOT	Not Active	Data comes as is. SHPO was contacted, data needs to be purchased - DOT not pursuing at this time			
30	Floodplain (FEMA) streaming		X	X	R			DAAR	1	Consultant	Complete	Utilizing streaming service from FEMA we will create regional layer files from regional views.			
30.1	DFIRM - Digital Flood Insurance Rate Map				R&C	DFIRM_FEMA_POLY		GRAEF	1	Consultant	Complete	Using DFIRM downloaded from FEMA we will create county and Regional feature classes to be use business area workflows.			
31	Surface Water (DNR)	Polygon	X	X	R		SURFACE_WATER_VIEWER.lyr	GRAEF	1	Consultant	Complete	Surface water feature class from DNR. This feature will only be a regional data layer.			
31.1	Hydro Area and Line				R&C	HYDRO_CNTY_POLY; HYDRO_CNTY_LINE		GRAEF	1	Consultant	Complete	Second, is hydro area and line sourced from the counties. This feature class will be produced at bc county and regional level.			
32	Wetlands - DNR (w/wl)	Polygon	X	X	R		w/wl.lyr	GRAEF	1	Consultant	Complete	Empty Data Dictionary			
33	Soils (USDA)	Polygon	X	X	R	SOIL_USDA_POLY	SOILS.lyr	GRAEF	1	Consultant	Complete	Merge Script Completed & Data Dictionary updated with DOT field names			
34	Soils Management (Cuts & Fills)	Google KMZ			R			DAAR	2	WisDOT	Complete	Process document - merge MD_Soil_Join and MD_SOIL_USDA_POLY. Both documents pertain to the creation of one feature. Add a break between documents so the reader can understand where one process ends and the other begins.			
35	Contours (County)	Line	X	X	C	TOPG_LINE		GRAEF	2	WisDOT	Complete	Soils quantifies data is new data that is just starting to be collected. This data set will be a supplement that we will incorporate into SERGIS structure. The base spatial feature will be either the improve project or construction map feature class. (see Current improvement programs (LET) and Construction items above.) The data will be manually entered into a spreadsheet for now. We will create a feature table based on data from the spreadsheet to be joined to the features listed previously. Develop data structure for geodatabase table.			
36	Utility Permits	Database	X	X	C			DAAR	2	WisDOT	Complete	Evaluate table with data. determine how best to store data. We will use the current data that we have available. We will use IDT_RDWY_NPRQJ_LINE and IDT_PPRIQJ_FOR_GIS both located in the SOELayers\Region\geodatabase folder to create a generic project line work. After we make this join join the spreadsheet with cut and fills and symbolize appropriately.

# Asset Management (GIS)

## SER Needs Assessment Findings

- Findings
  - Siloed data storage
  - Disparate data formats
  - Redundant data & processes
  - Unique, individual workflows
  - Need for more access to data
    - Accurate
    - Current
  - Need for more efficient workflows
    - Timely creation of data/maps
  - Need for useable outputs

# Asset Management (GIS) Challenges & Lessons Learned

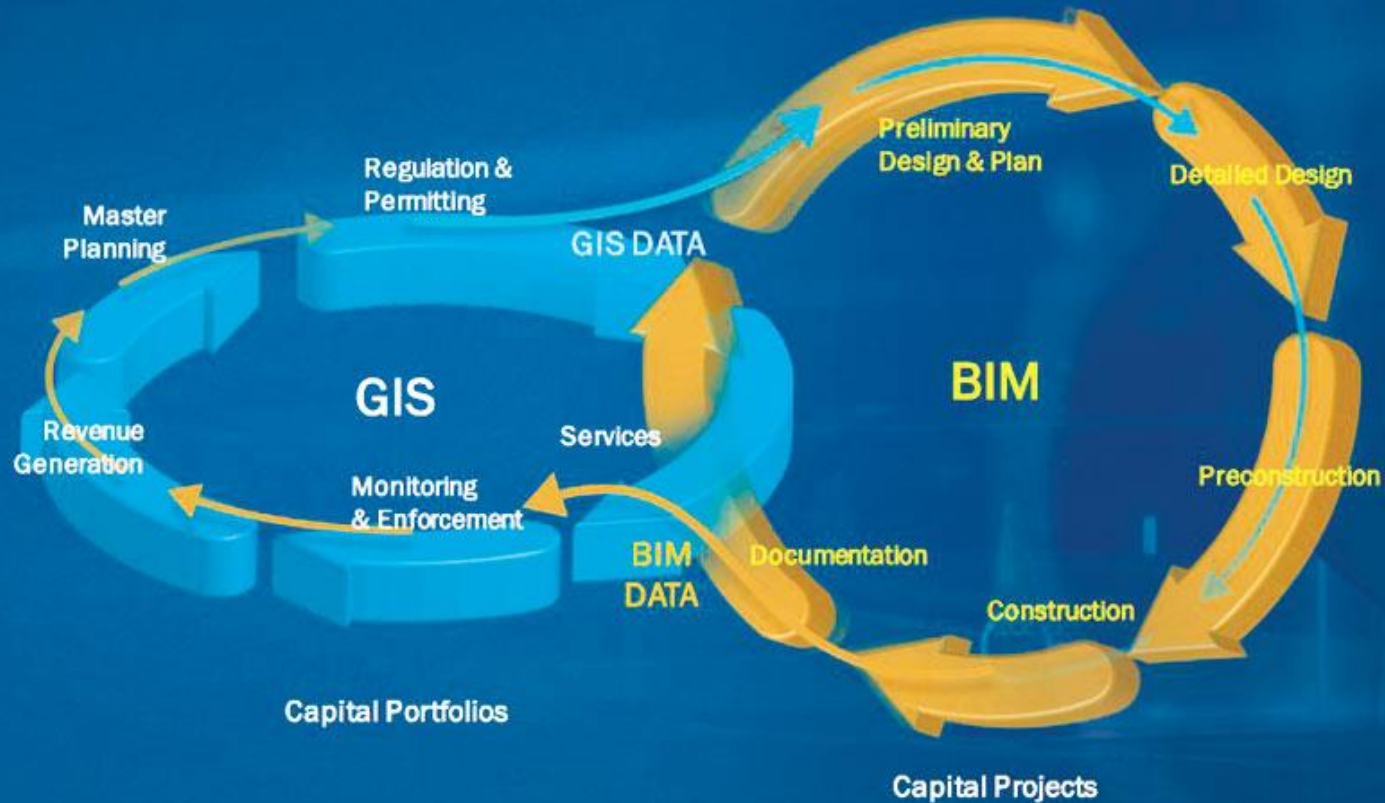

- Data
  - Where is it?
  - What should we start with?
  - How good is it?
  - How complete is it?
- Access
  - Where should data be stored?
  - Who should have access to what?
- Maintenance
  - Who's responsible?

# Asset Management (GIS): Keys to Success
