

Express 4d Simulation Scheduling and Construction Management with Dynamo

Enrique Galicia

Mati Arch | @practicalbim

About the speaker

Enrique Galicia Tovar

Enrique Galicia is a BIM Specialist which works as a Consultant to several International Firms, He provides real construction solutions to common problems while implementing and using BIM, using Autodesk Revit, Autodesk Navisworks, Autocad Civil 3d and Dynamo. He has 13 years of experience with workflows of BIM, interoperability and developments.

Worked over more than 110 projects with BIM, and worked deeply on research to enhance future workflows for BIM uses. Awarded Excellence Professor of Architecture on 2019 by the Tecnológico de Monterrey giving BIM Courses and Seminars, Has developed 81 online courses on Udemy's Platform to spread the word using BIM true potential with more than 15000 students over 154 Countries, and its always happy to help.

Introduction to 4d Simulation

Introduction to 4d Simulation

4d Simulation it's the process of linking time schedule with construction elements, so that it can **easily** give us an idea of how construction would be performed, tracked and reported.

Dia=1 Semana=1 Mes=06

4d Simulation Samples

Revit Introduction

MODELING SOFTWARE

Allow us to create construction elements with parameters.

Model elements follow construction processes

Shared Parameters allow us to set custom values.

Properties

M_Concrete-Rectangular Beam
400 x 800mm

Structural Framing (Girder) (1) Edit Type

Constraints

Reference Level	Level 6
Work Plane	Level : Level 6
Start Level Offset	0.0000
End Level Offset	0.0000
Orientation	Normal
Cross-Section Rotation	0.00°

Geometric Position

yz Justification	Uniform
y Justification	Origin
y Offset Value	0.0000
z Justification	Top
z Offset Value	0.0000

Construction

LO_Building	BA
LO_Level	L6
LO_Zones	G9
LO_Grid	1/2/C/D
SIMULATION	2_BA_L6
SIM_PART	2_BA_L6.9
TL_START	200618
TL_PRO	7

Materials and Finishes

Structural Material	Concrete, Cast-in-Place gray
---------------------	------------------------------

Structural

Navisworks Introduction

BIM PLATFORM SOFTWARE

Allow us to create interactions between several models and data types.

Reads all exported model properties so that values can be filtered out.

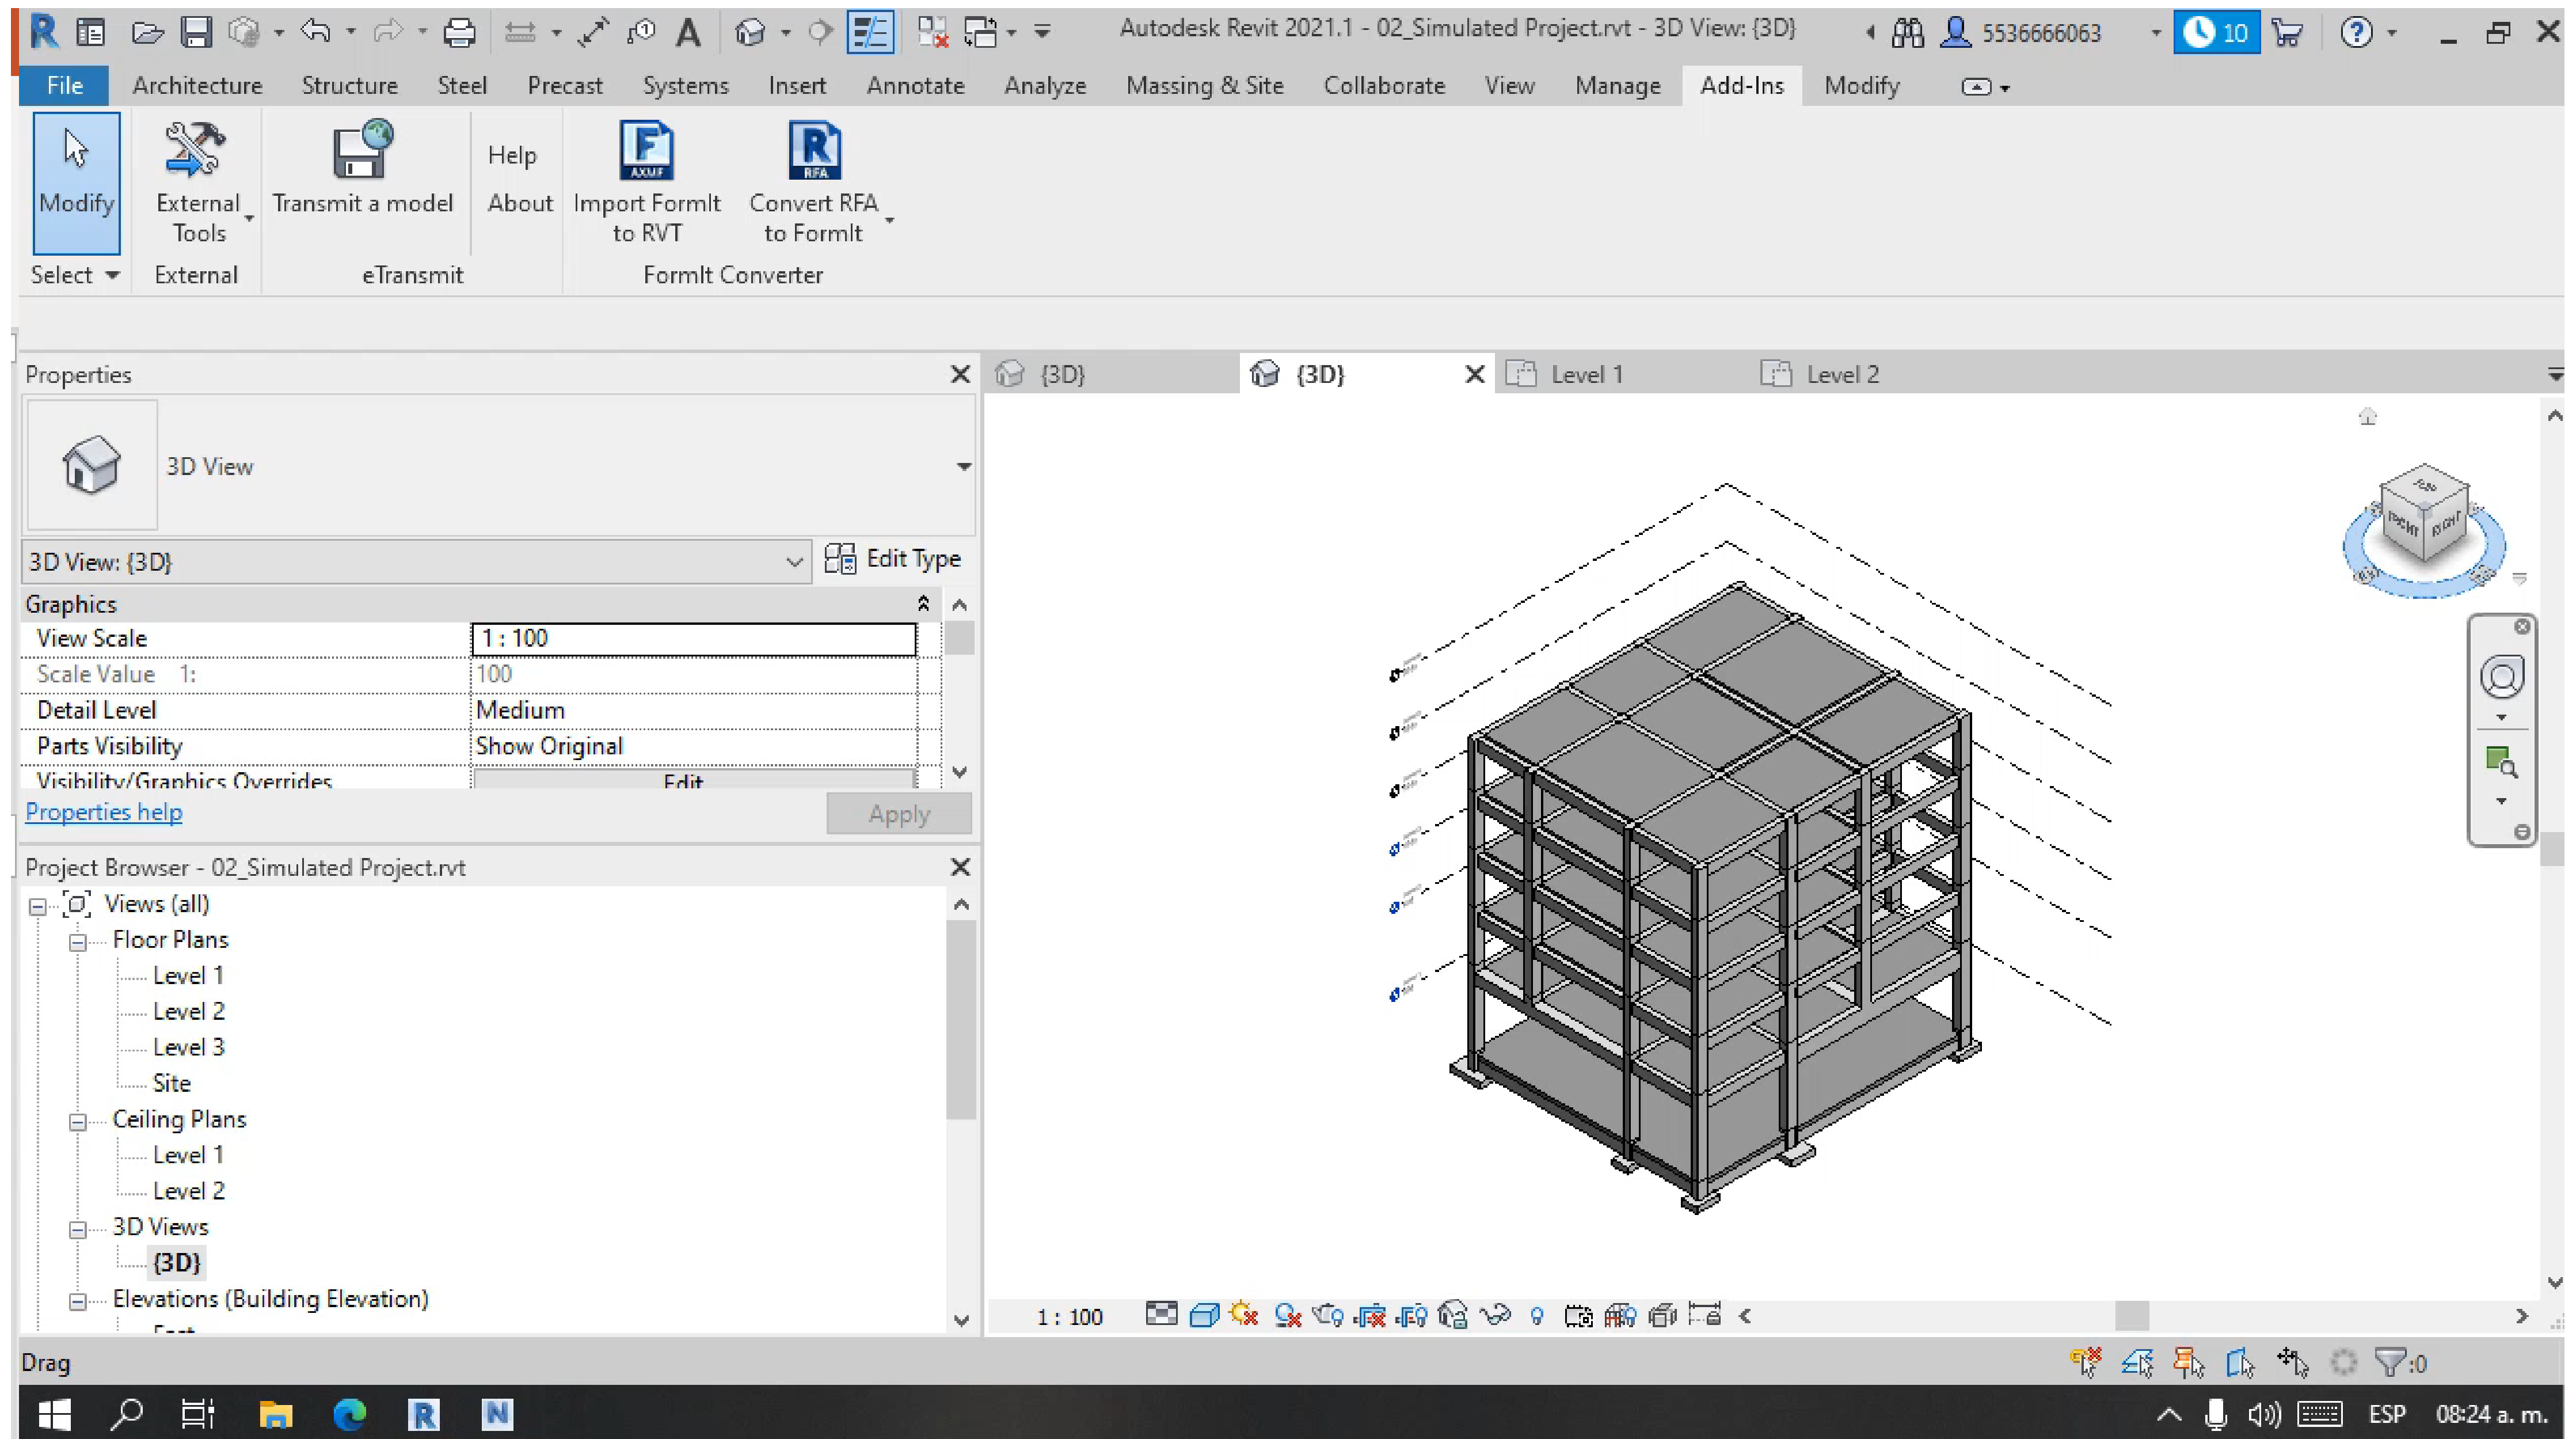

Creates 4d Simulation by the use of Parameters and Tasks

- ⊖ Base Level
- ⊕ Base Offset
- ⊕ Building Story
- ⊕ Category
- ⊕ Column Location Mark
- ⊕ Column Style
- ⊕ Computation Height
- ⊕ Cross-Section Rotation
- ⊕ Cut Length
- ⊕ Elevation
- ⊕ Elevation at Bottom
- ⊕ Elevation at Top
- ⊕ Enable Analytical Model
- ⊕ End Attachment Type
- ⊕ End Level Offset
- ⊕ Family
- ⊕ Height Offset From Level
- ⊕ Host
- ⊕ Id
- ⊕ Length

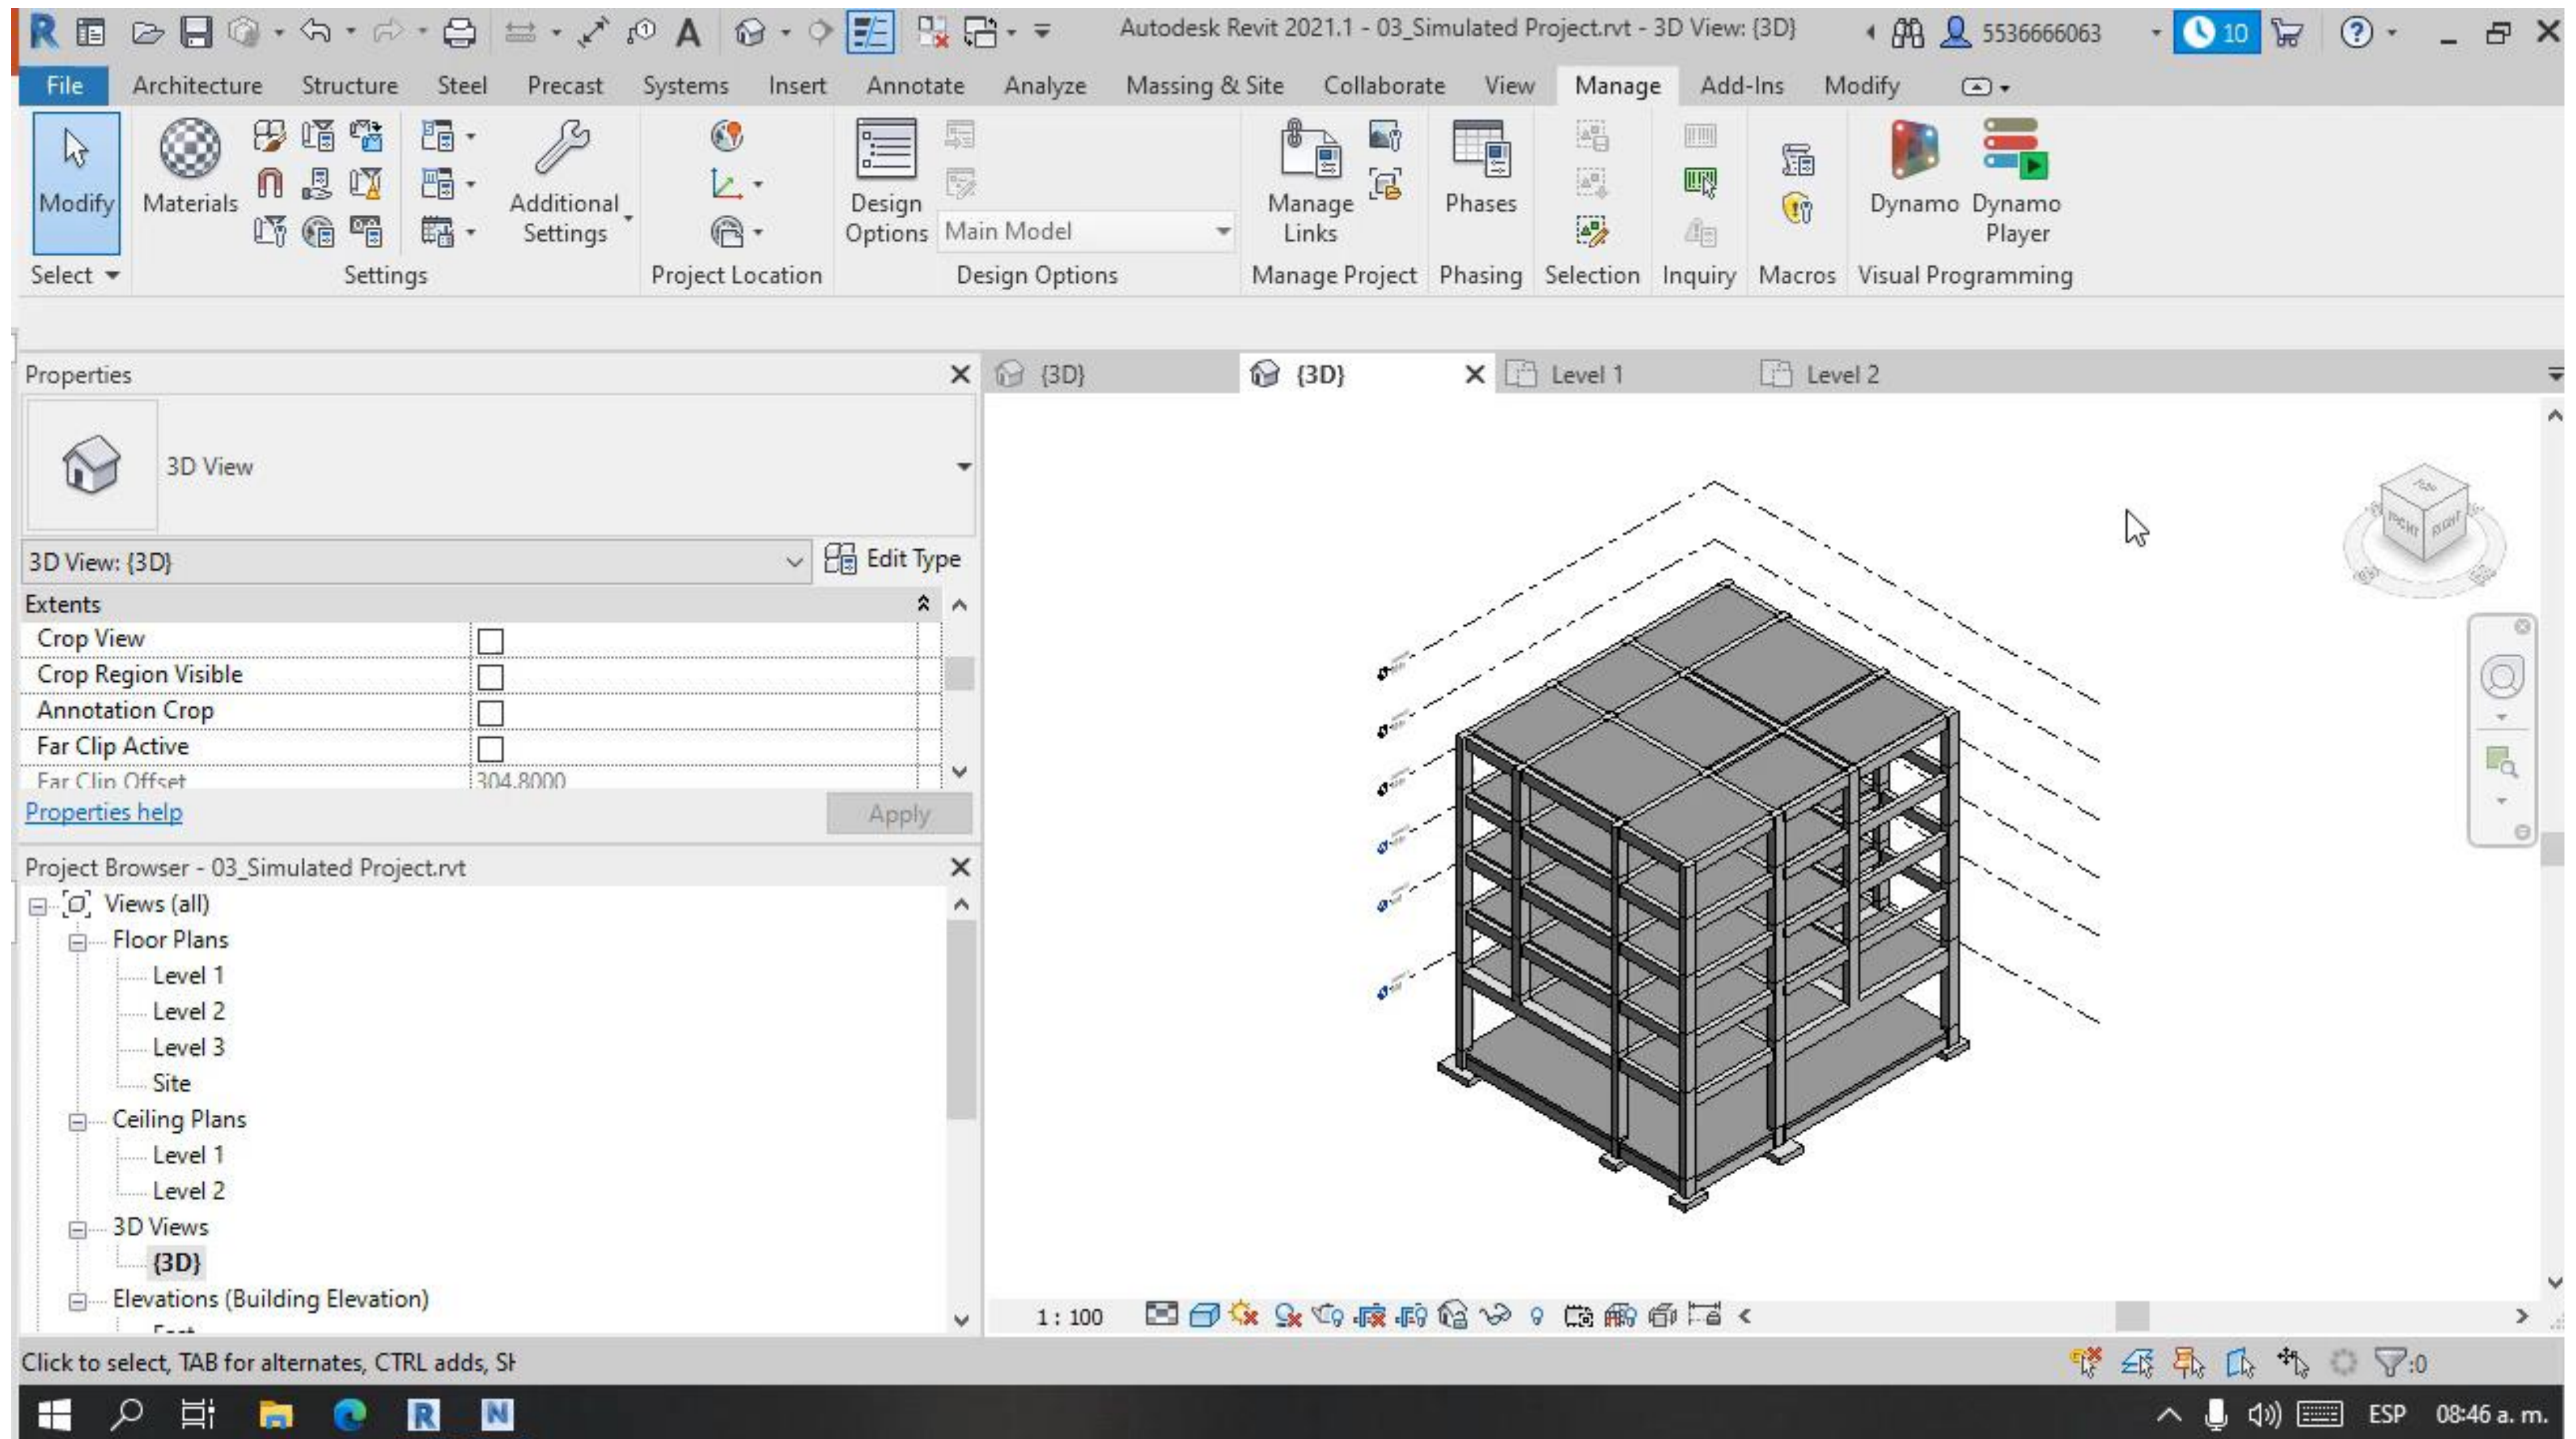

Basic Simulation Workflow

<https://youtu.be/CAfxvtyf4gQ>

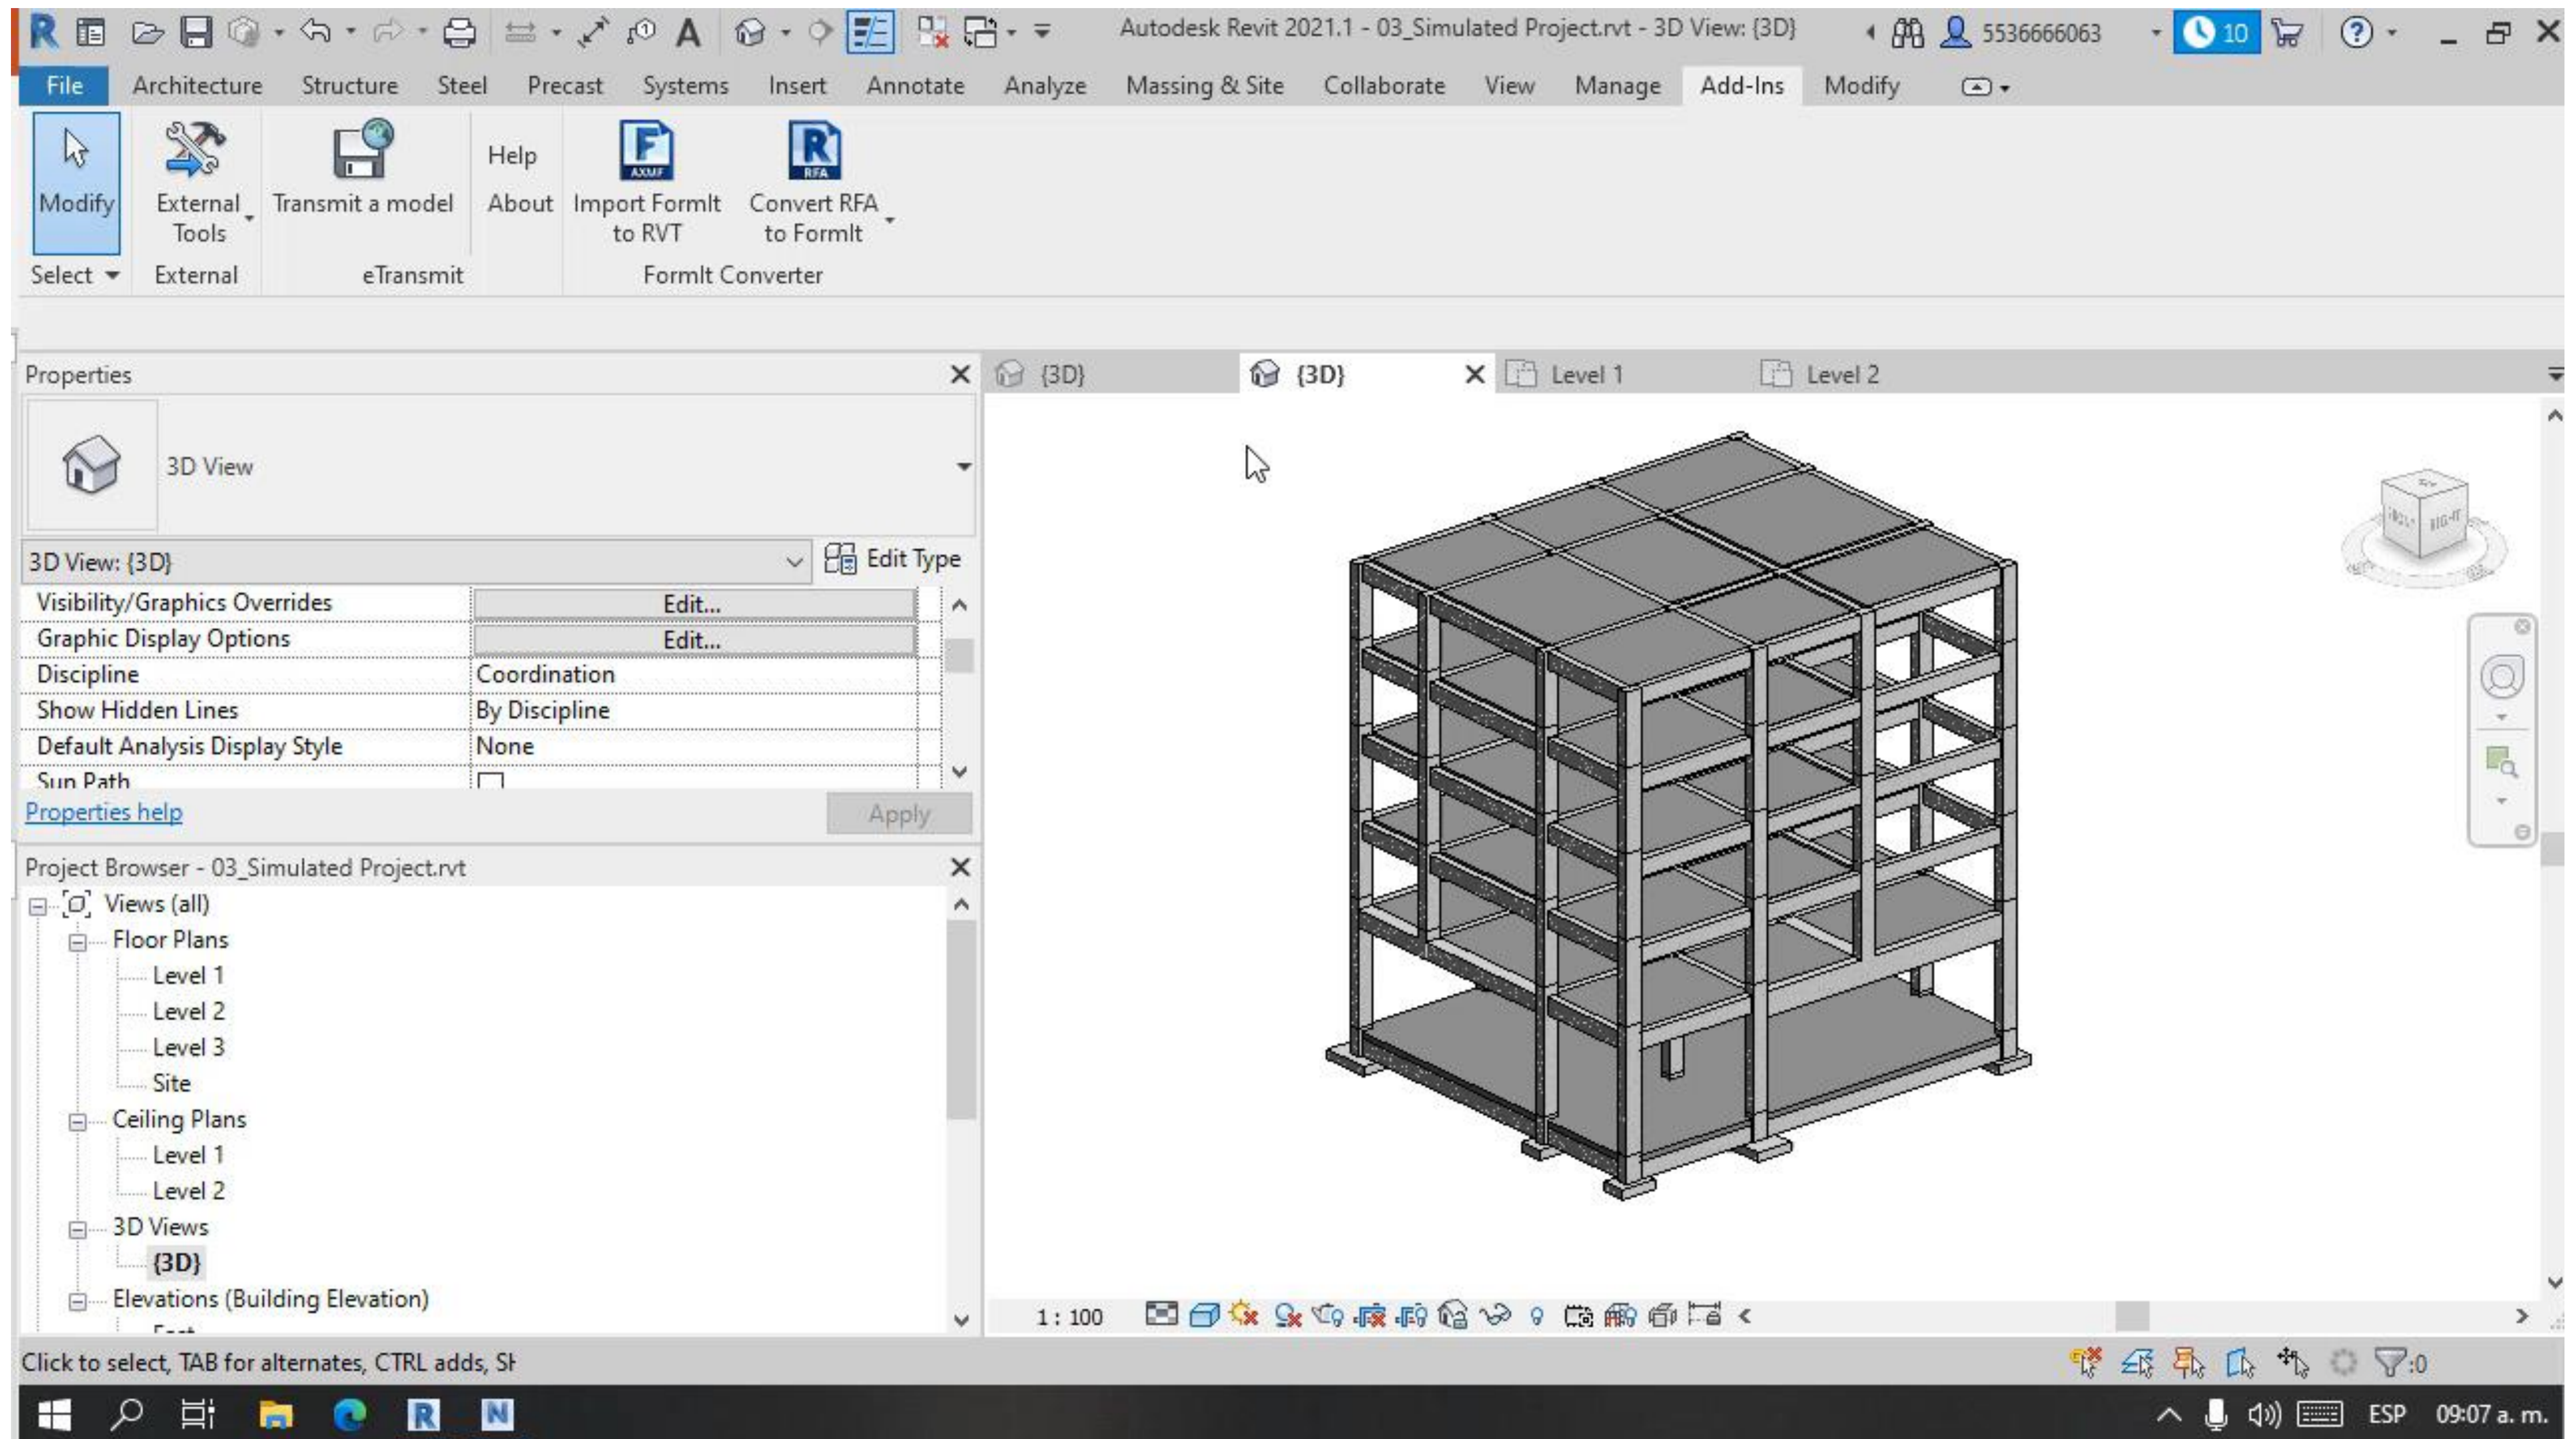

Parameters Simulation

<https://youtu.be/jrJUiVzytjl>

Simulation on Navisworks

<https://youtu.be/9cVG7TJokXE>

Learn how to create in
minutes a 4d Simulation from
model information workflows.

Create 4d Simulation in Minutes

So far, all elements covered would create a functional 4d Simulation, but thinking on all the information that its already on the model and the possibilities to cross it, it should be a better way that improves time of creation and linking with model elements

Dynamo as a Game Changer.

Playground Application used for:

- **Improve Complex Modeling**
- **Automate Repetitive Tasks**
- **Set Model Management**
- **Transform Model Information**
- **Create interoperability between different files.**

Three Types of Audiences

- **Raw Users – That would pull all nodes from scratch and link with normal coding**
- **Medium Users - That would use workflow scripts and custom nodes to complete their requirements**
- **Low Users – That would just use the Dynamo Player, as their working tool.**

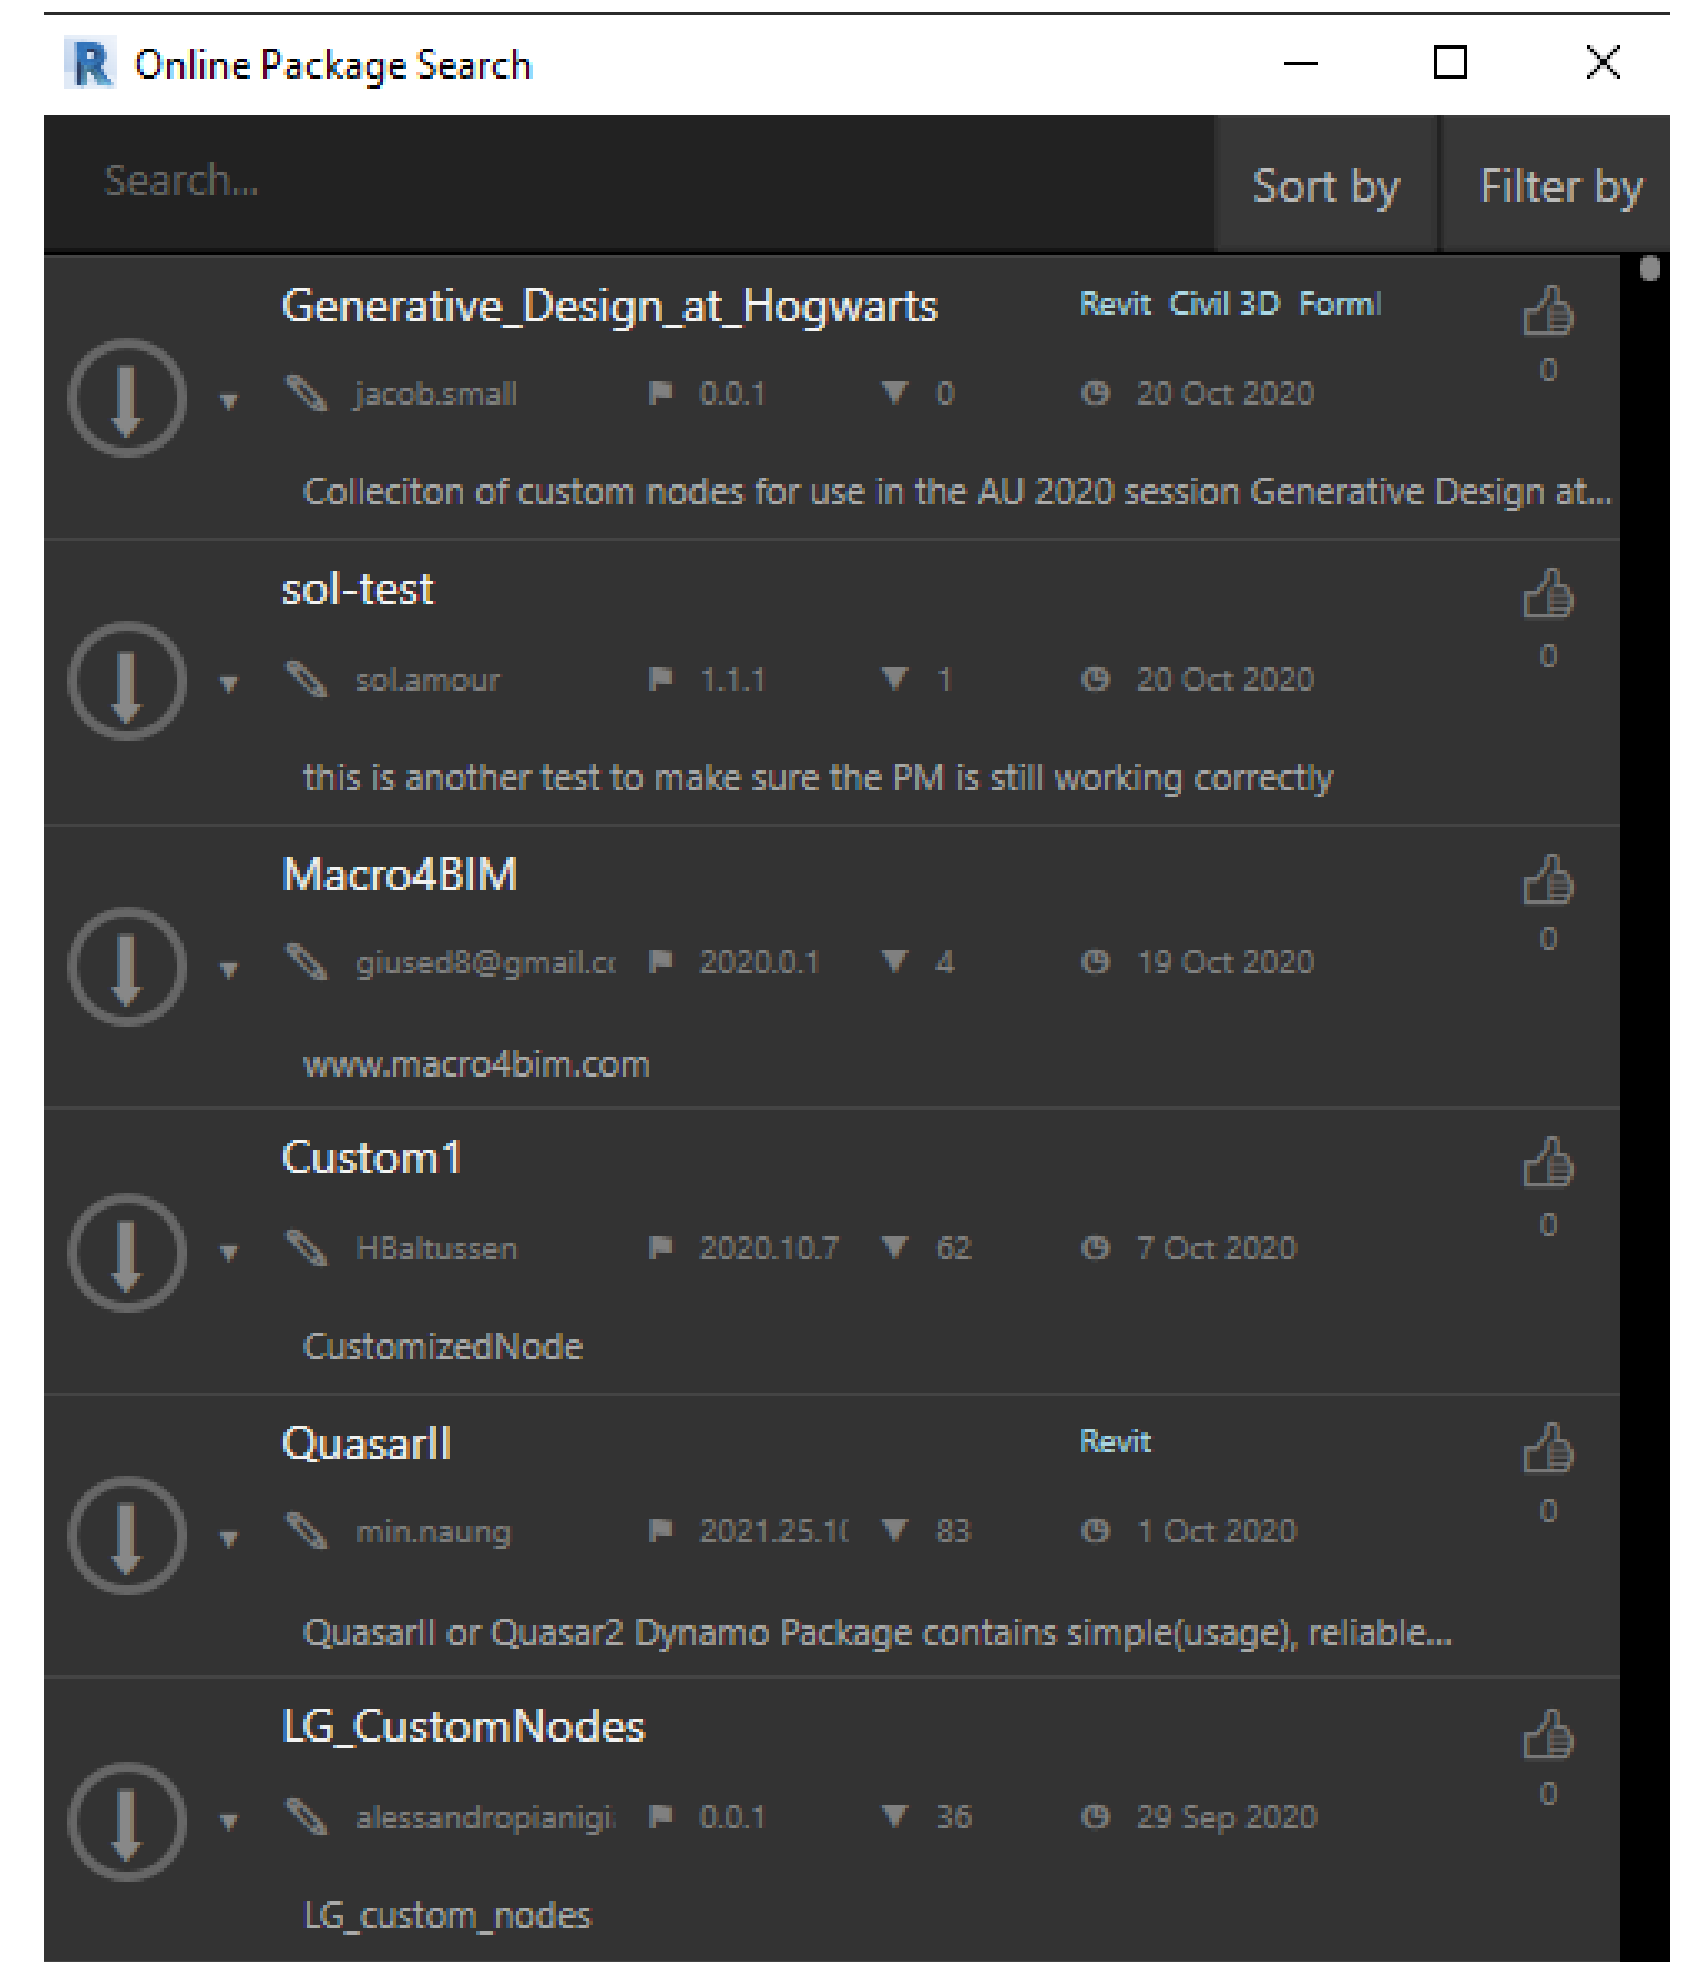

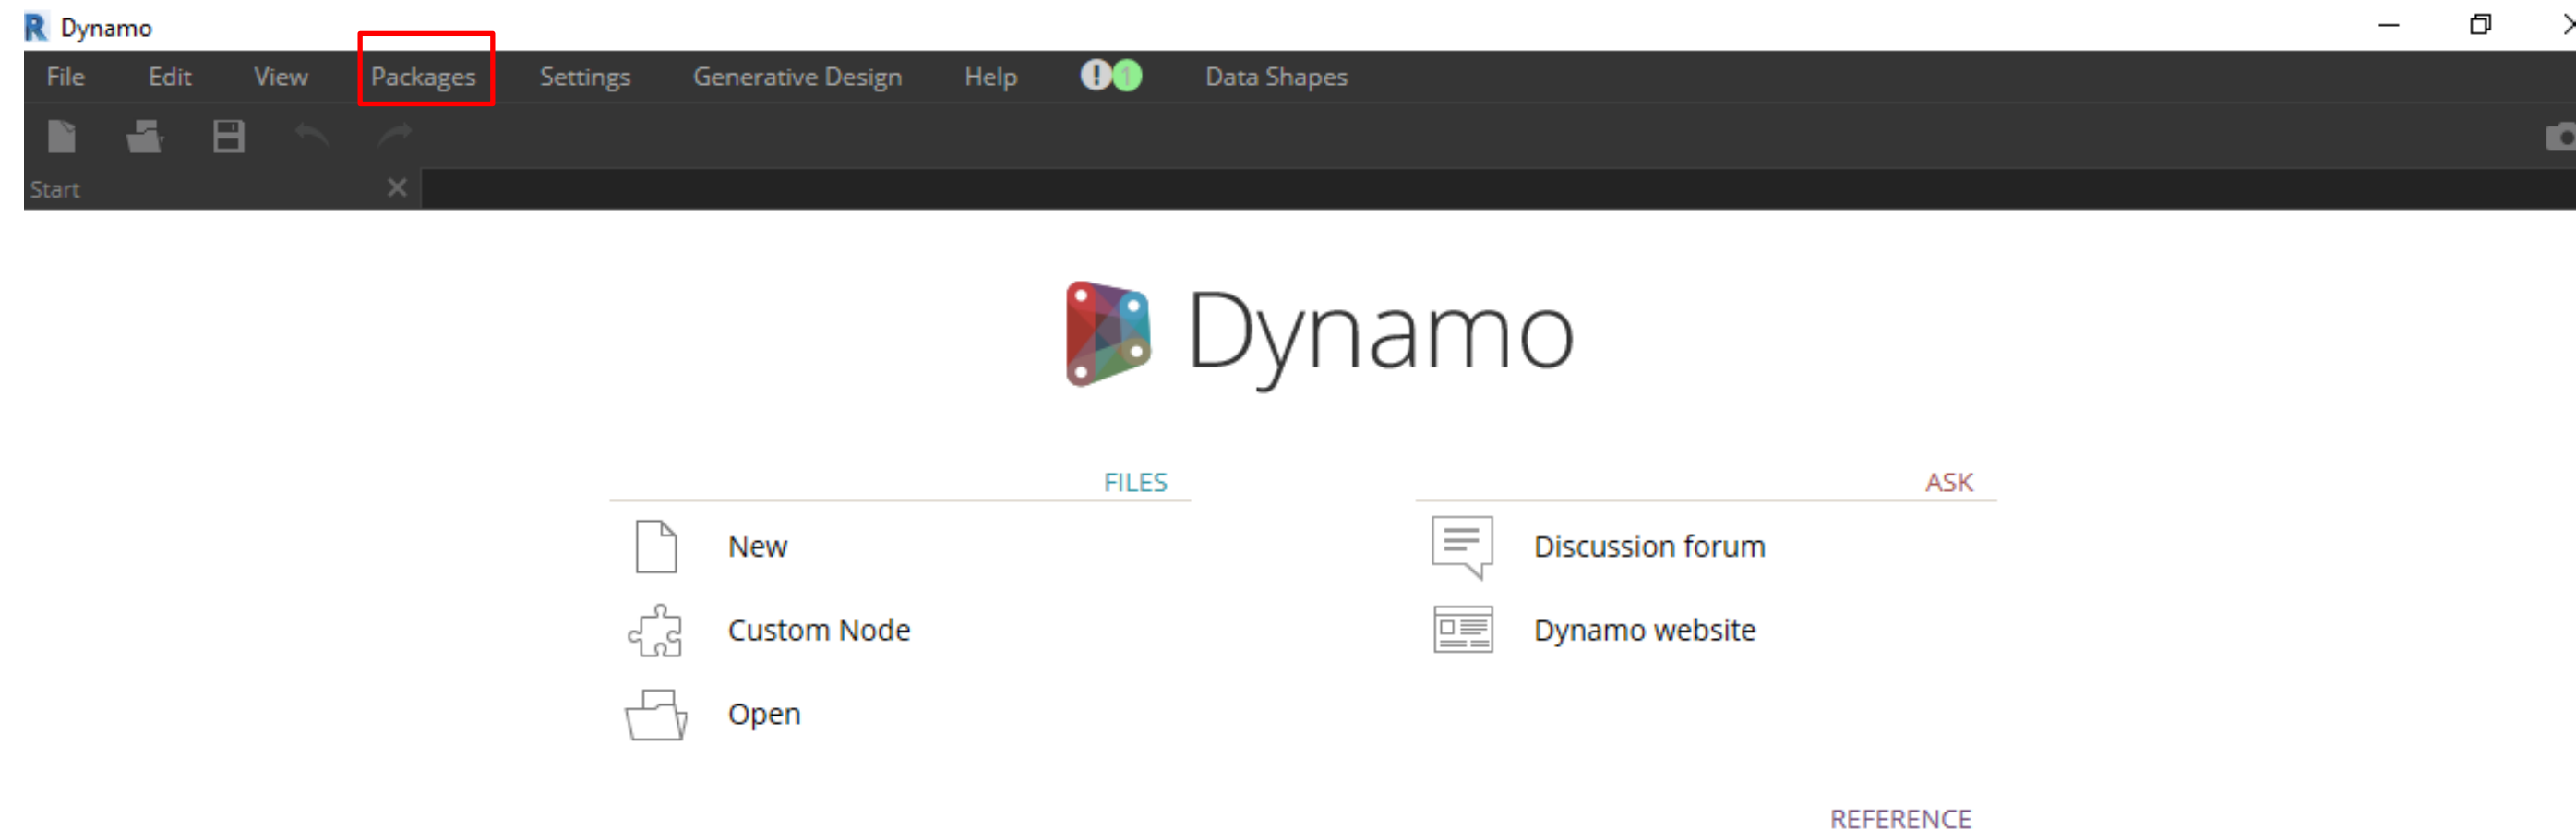

Dynamo Configuration

For this project it would be used dynamo with the following packages

Rhythm

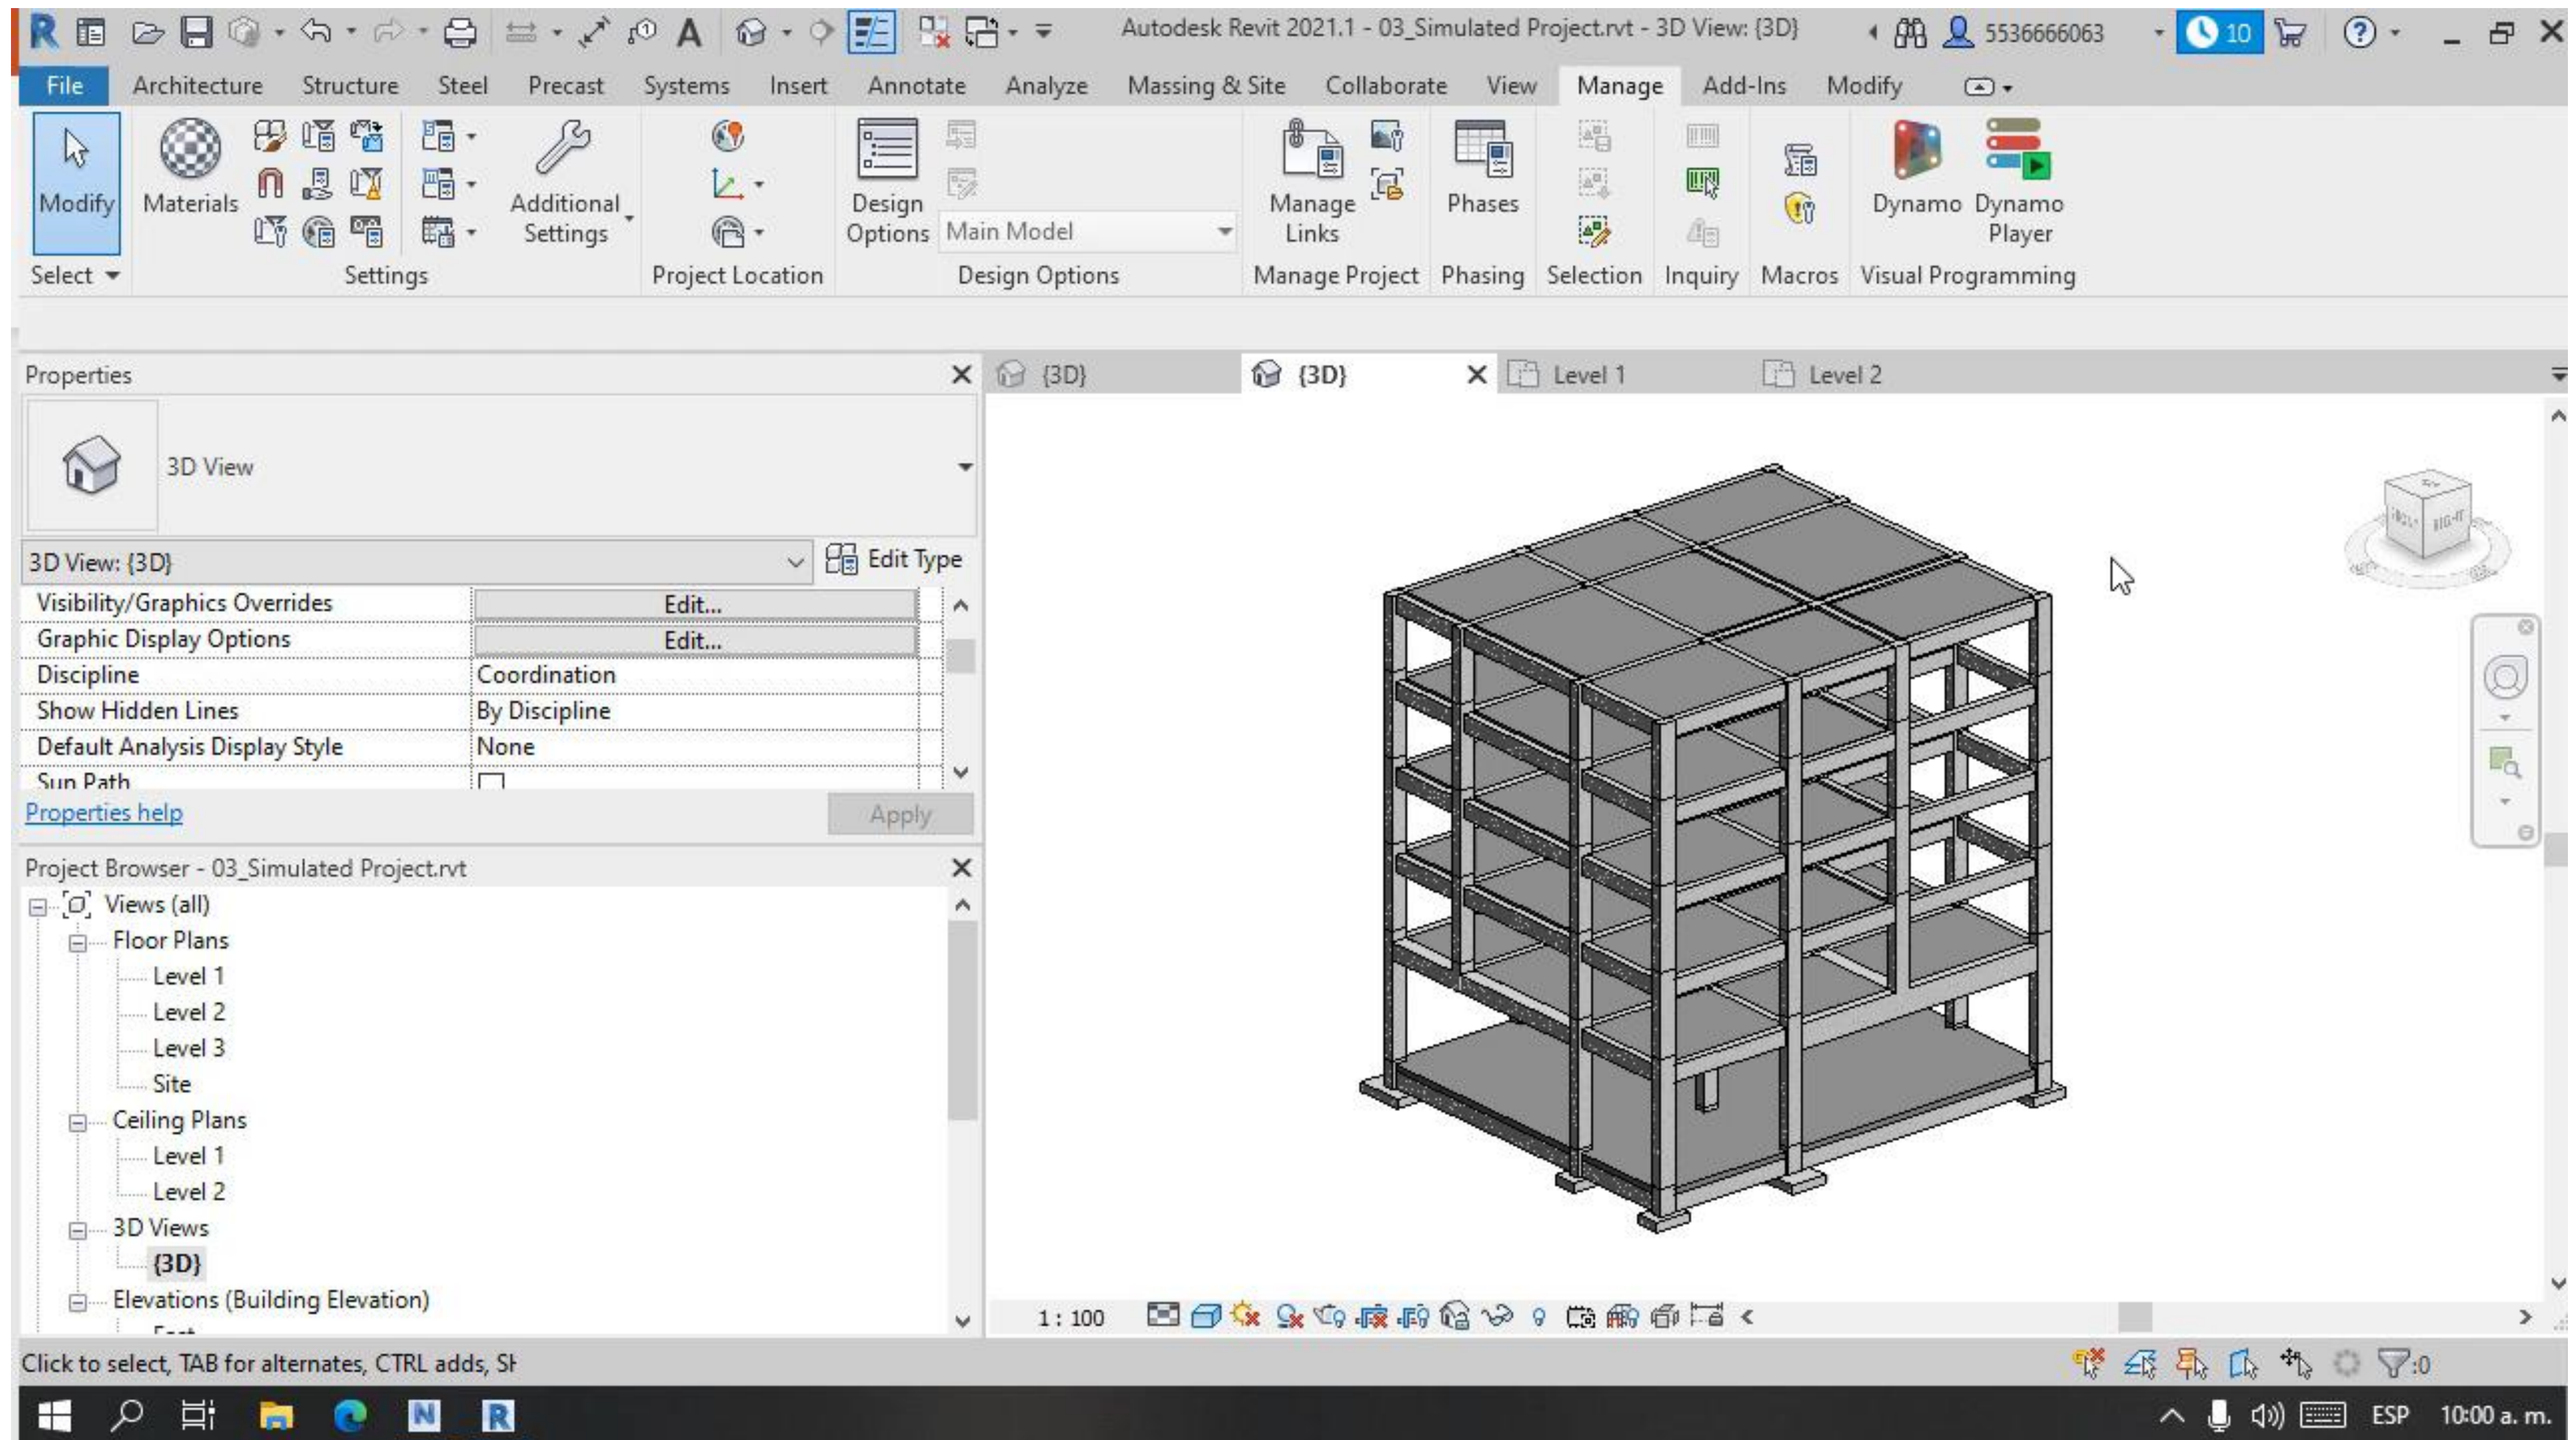

DataShapes

Practical BIM

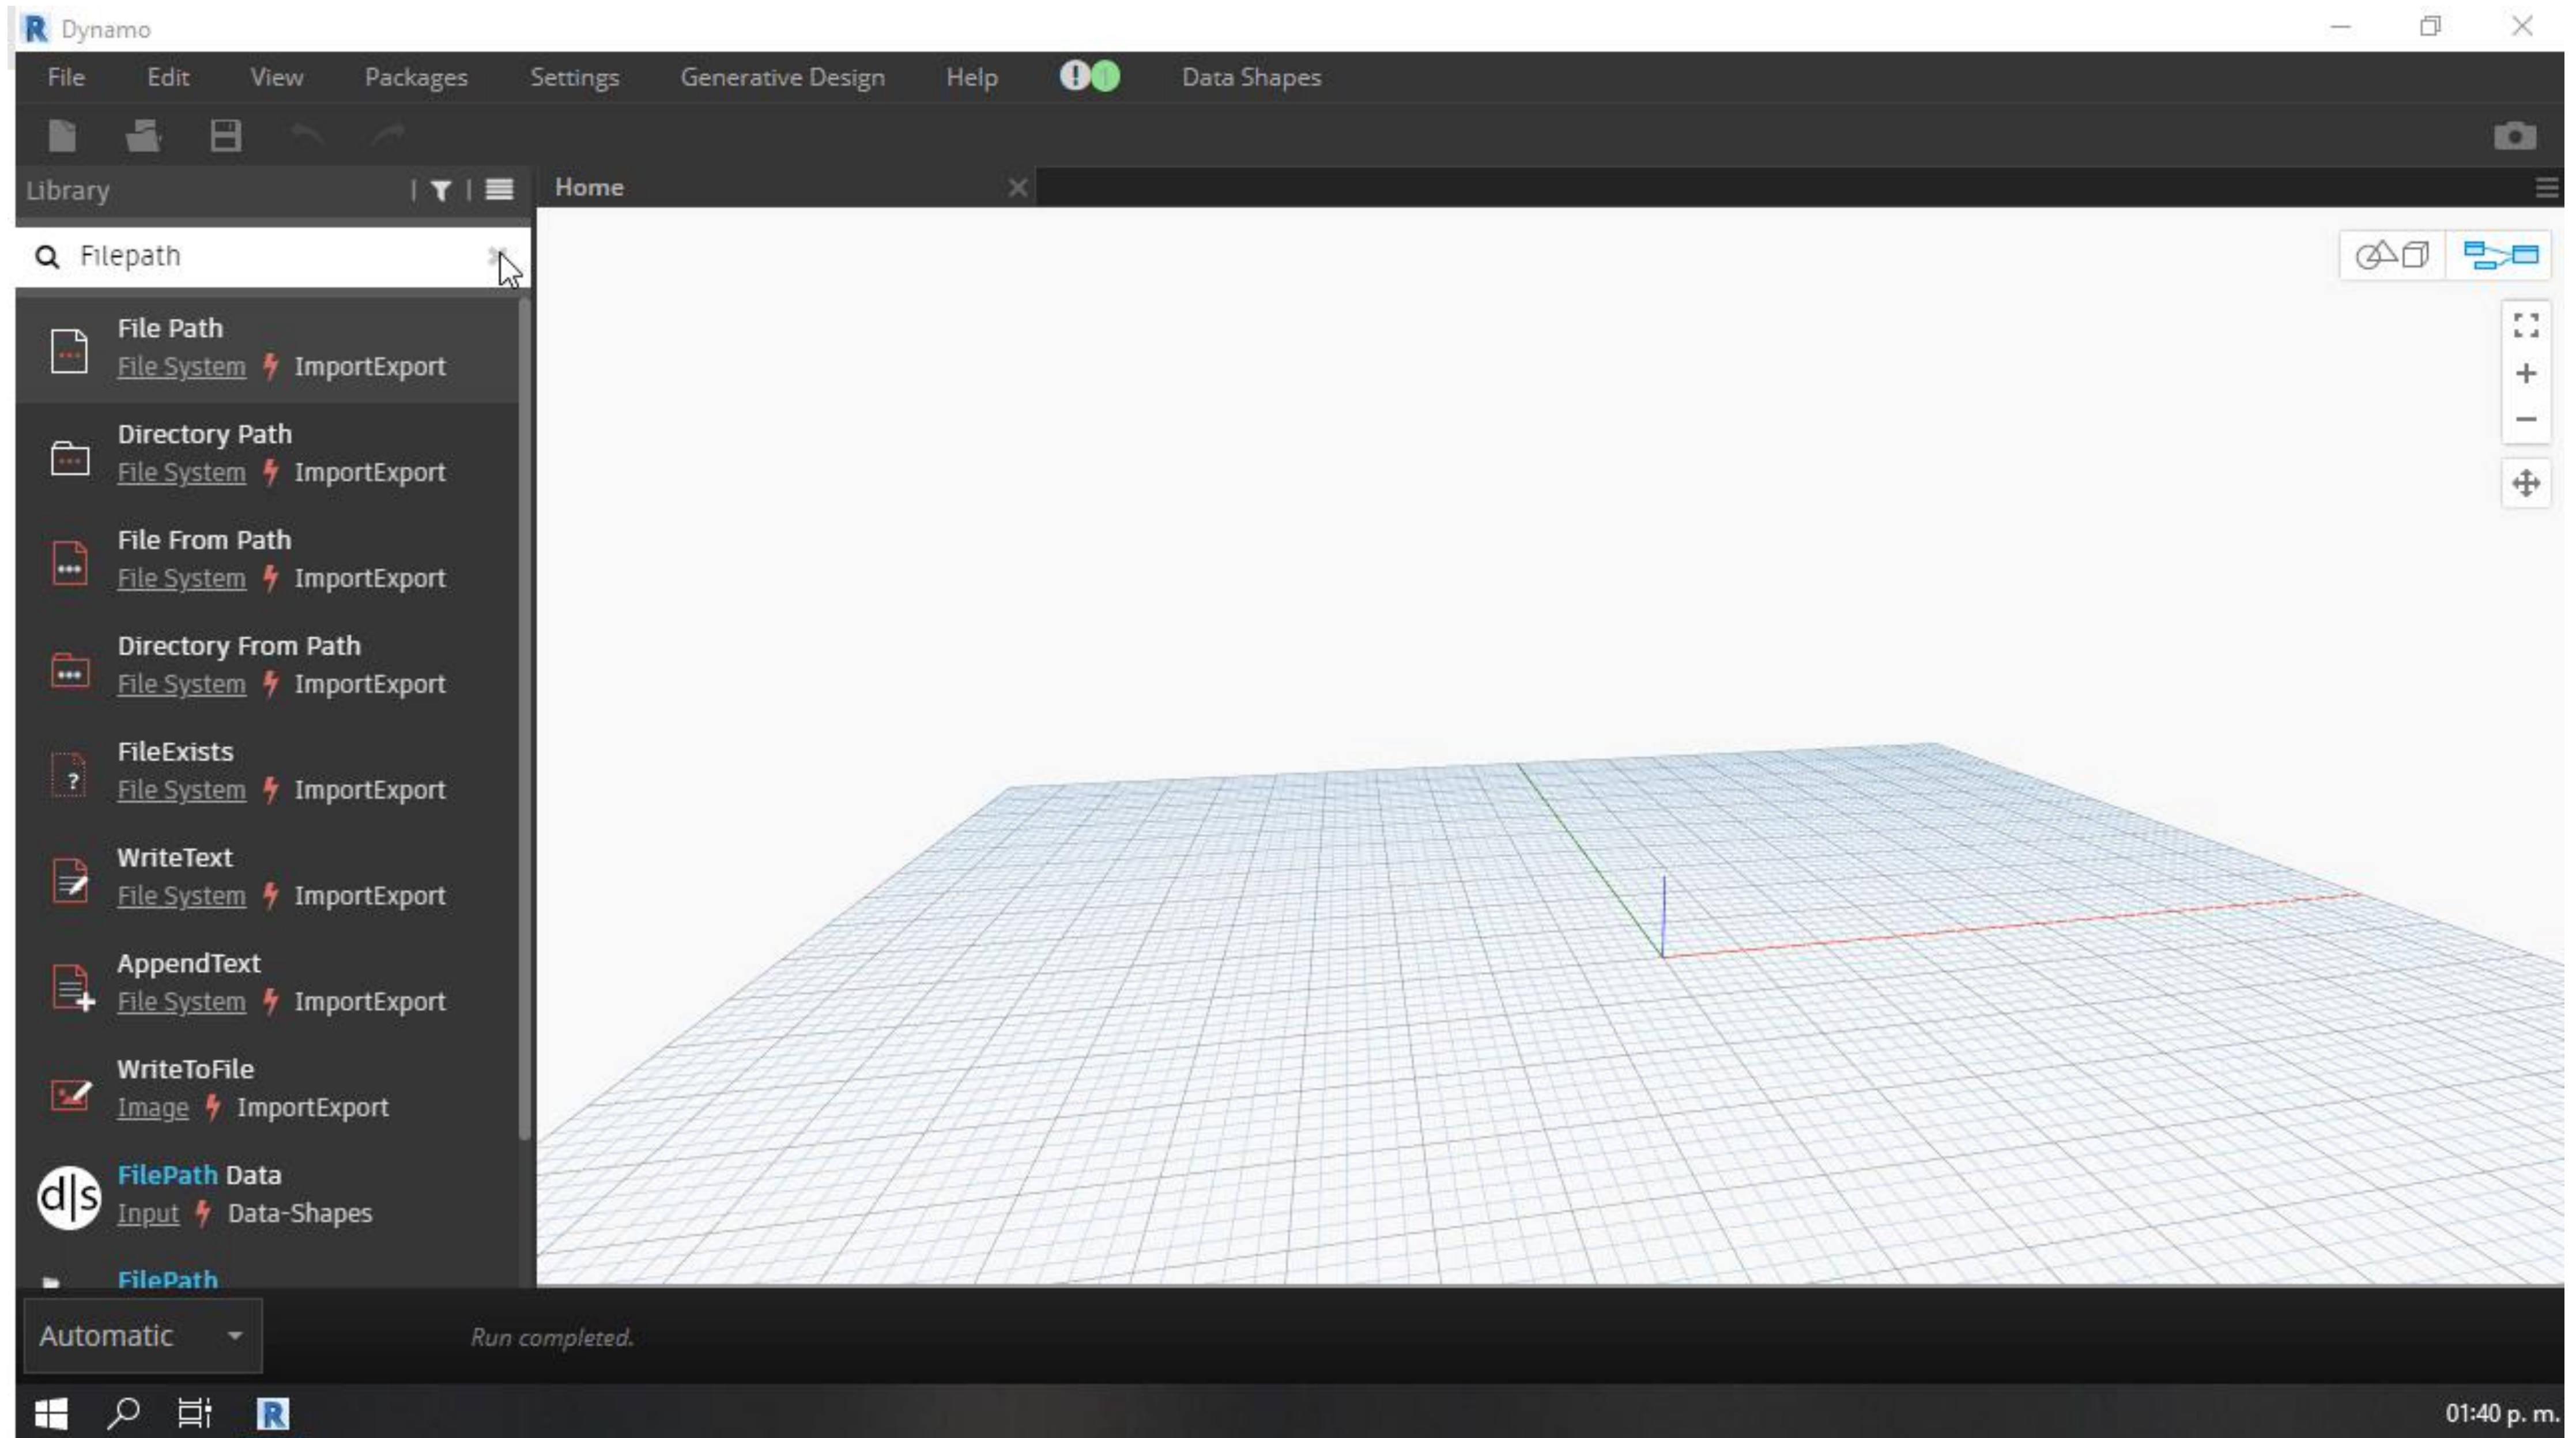

Using Dynamo for Writing the SIMULATION Parameter.

<https://youtu.be/9gjyckcxZMs>

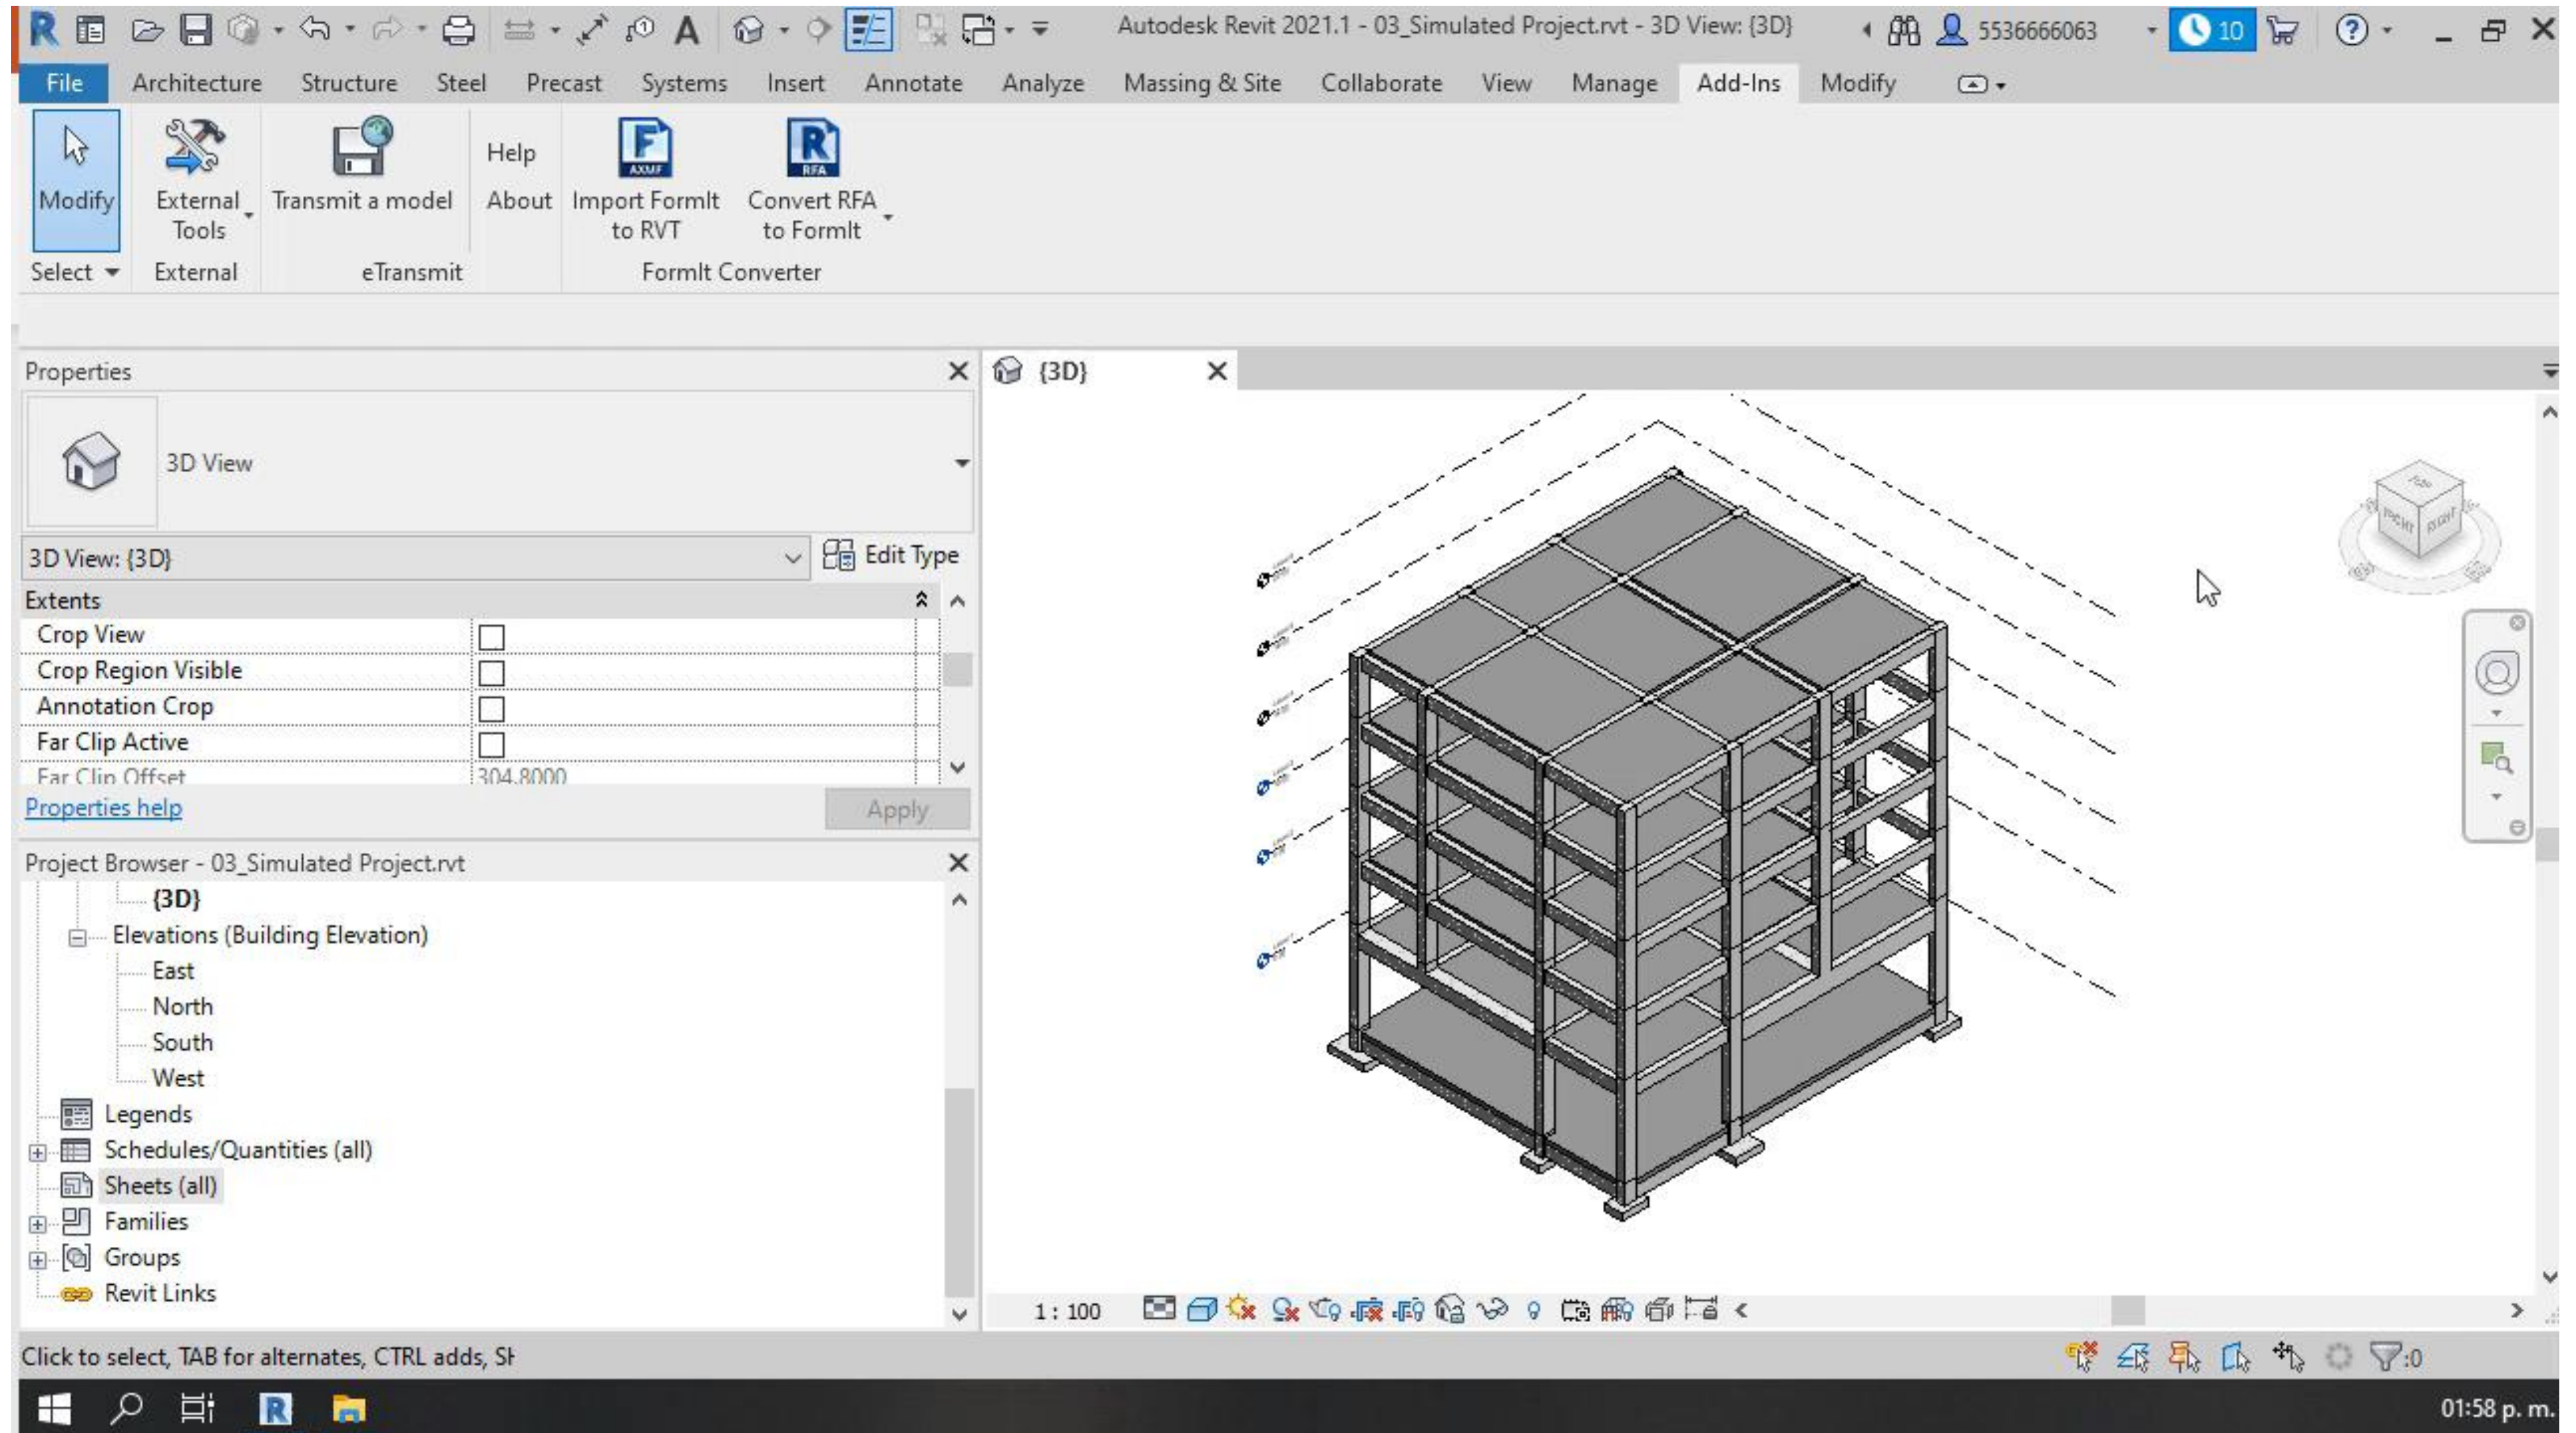

Creating a Time Schedule by Model Properties.

<https://youtu.be/wPPgU66jBNU>

Linking the Result on Navisworks.

<https://youtu.be/uPdK0qP-vJs>

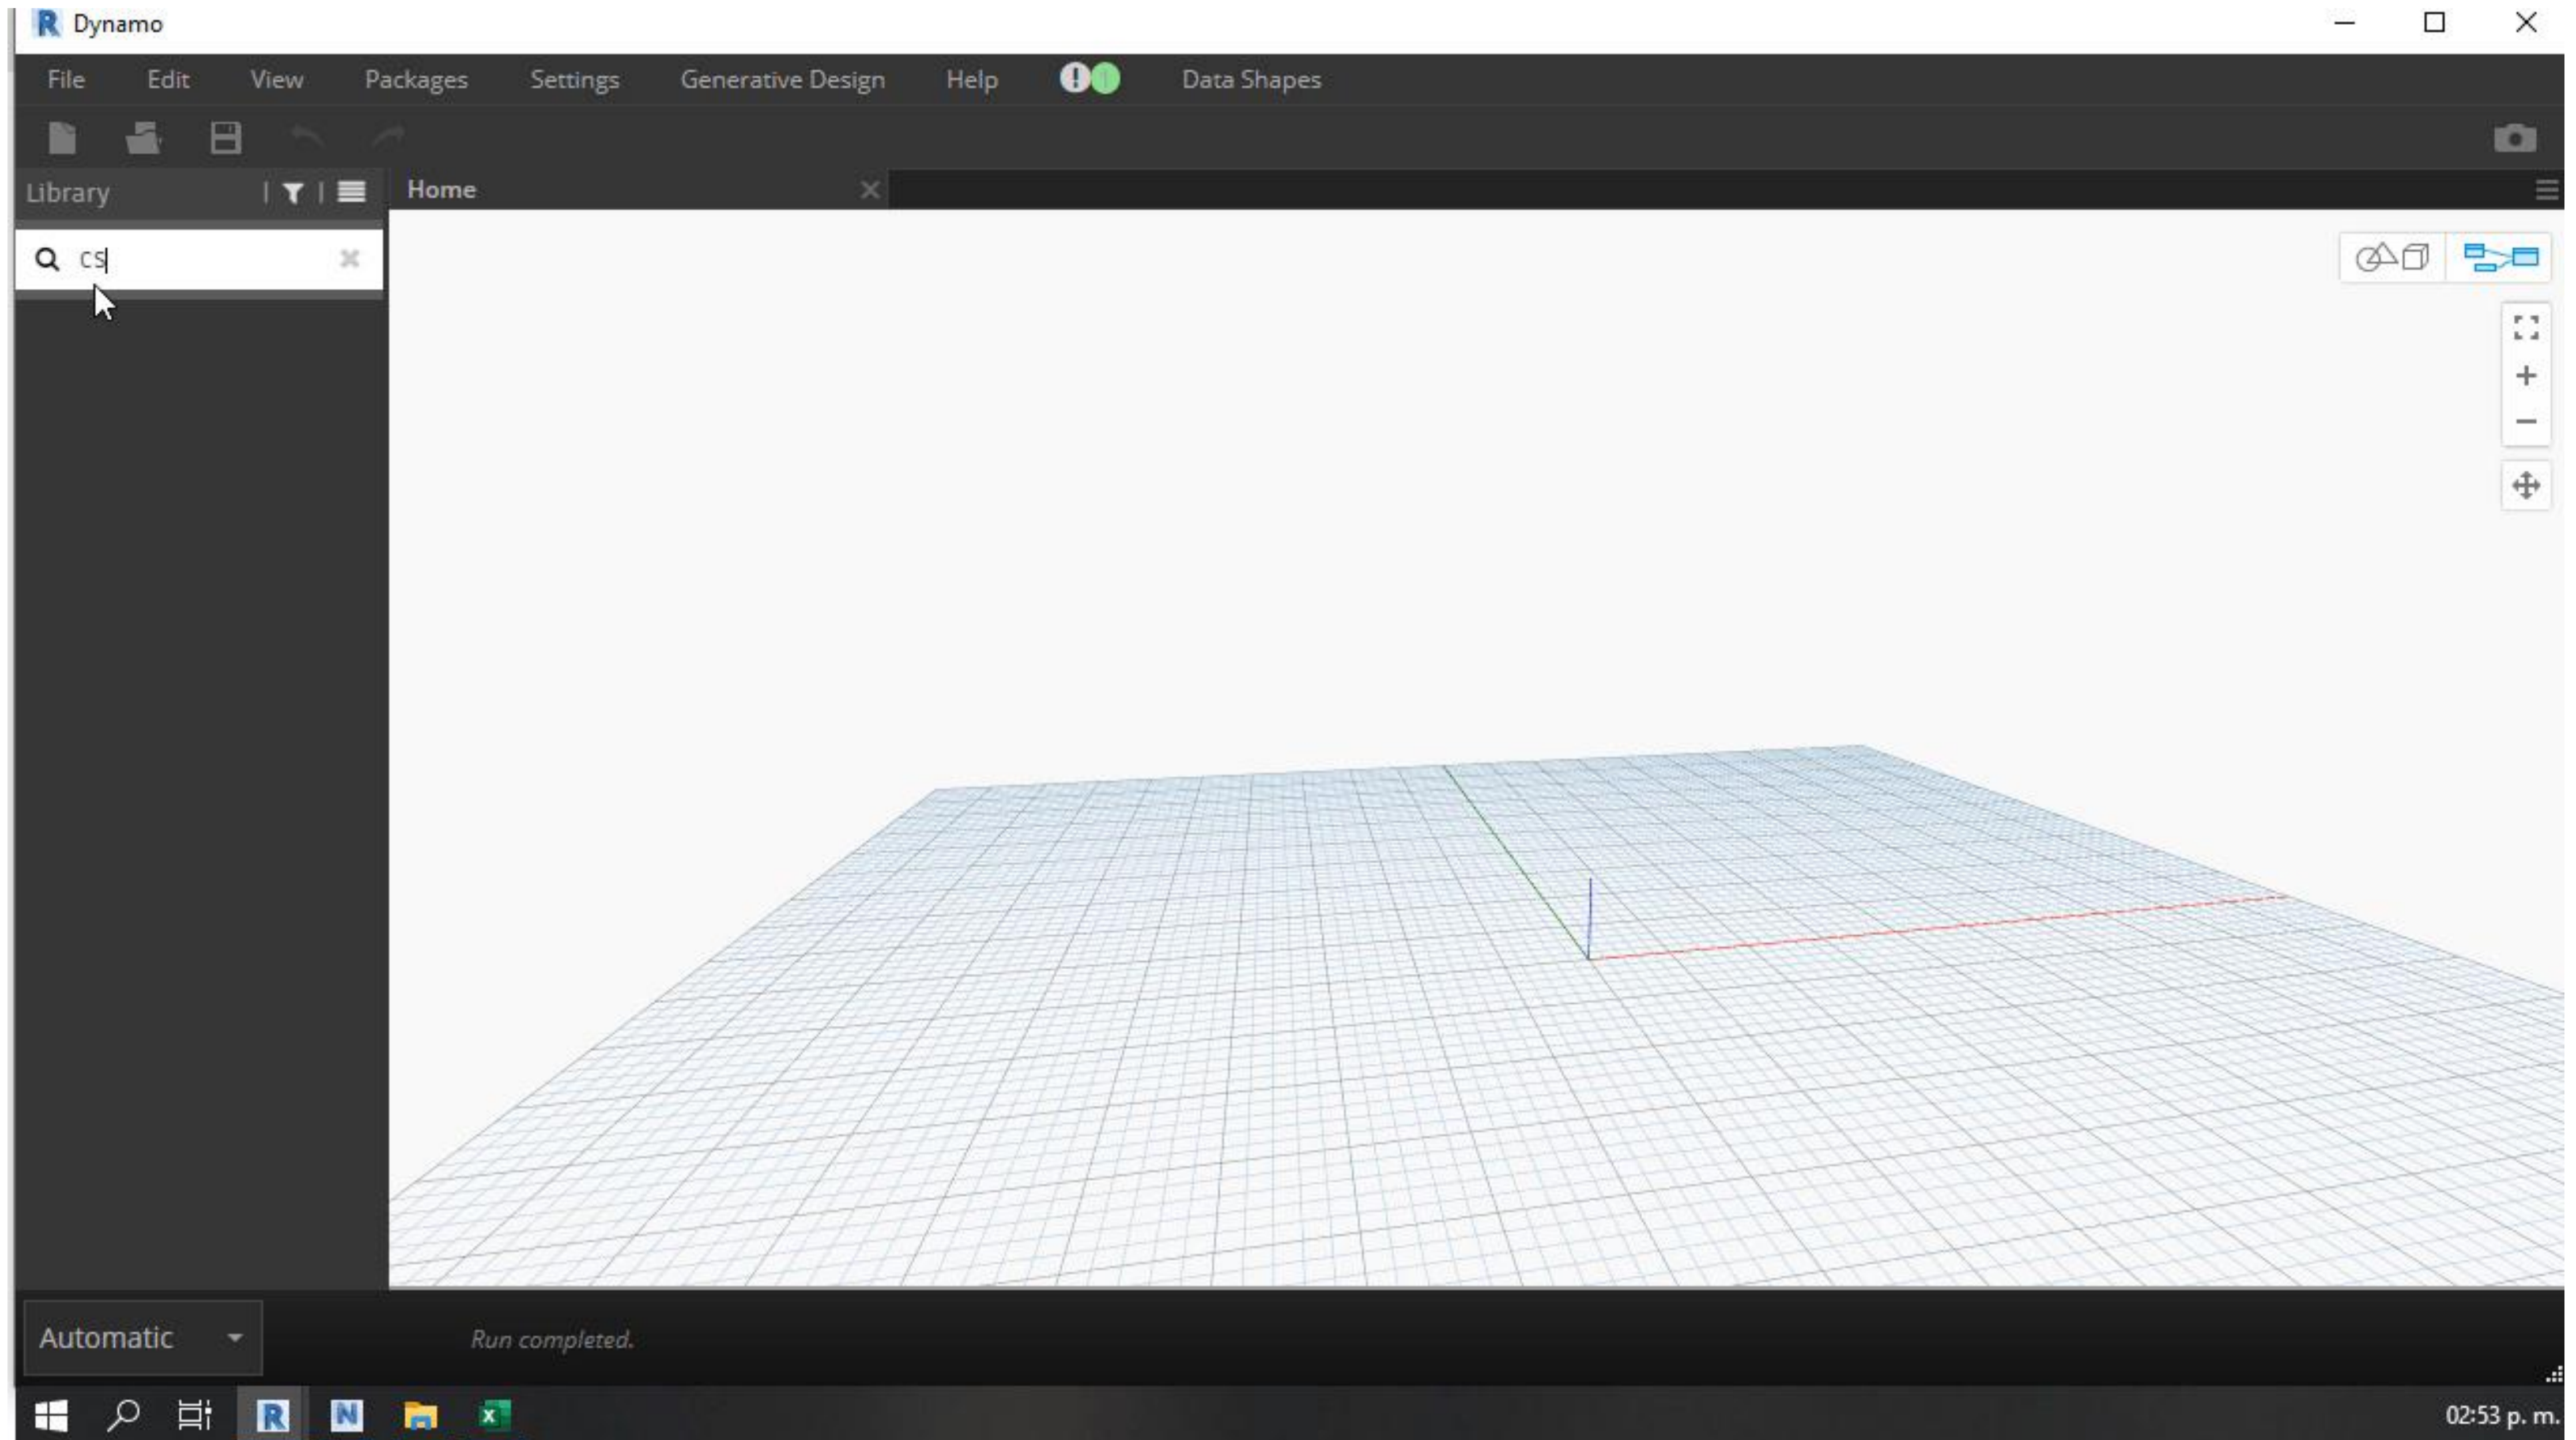

Create time scheduling
from the Model Data as
a Microsoft Project
output.

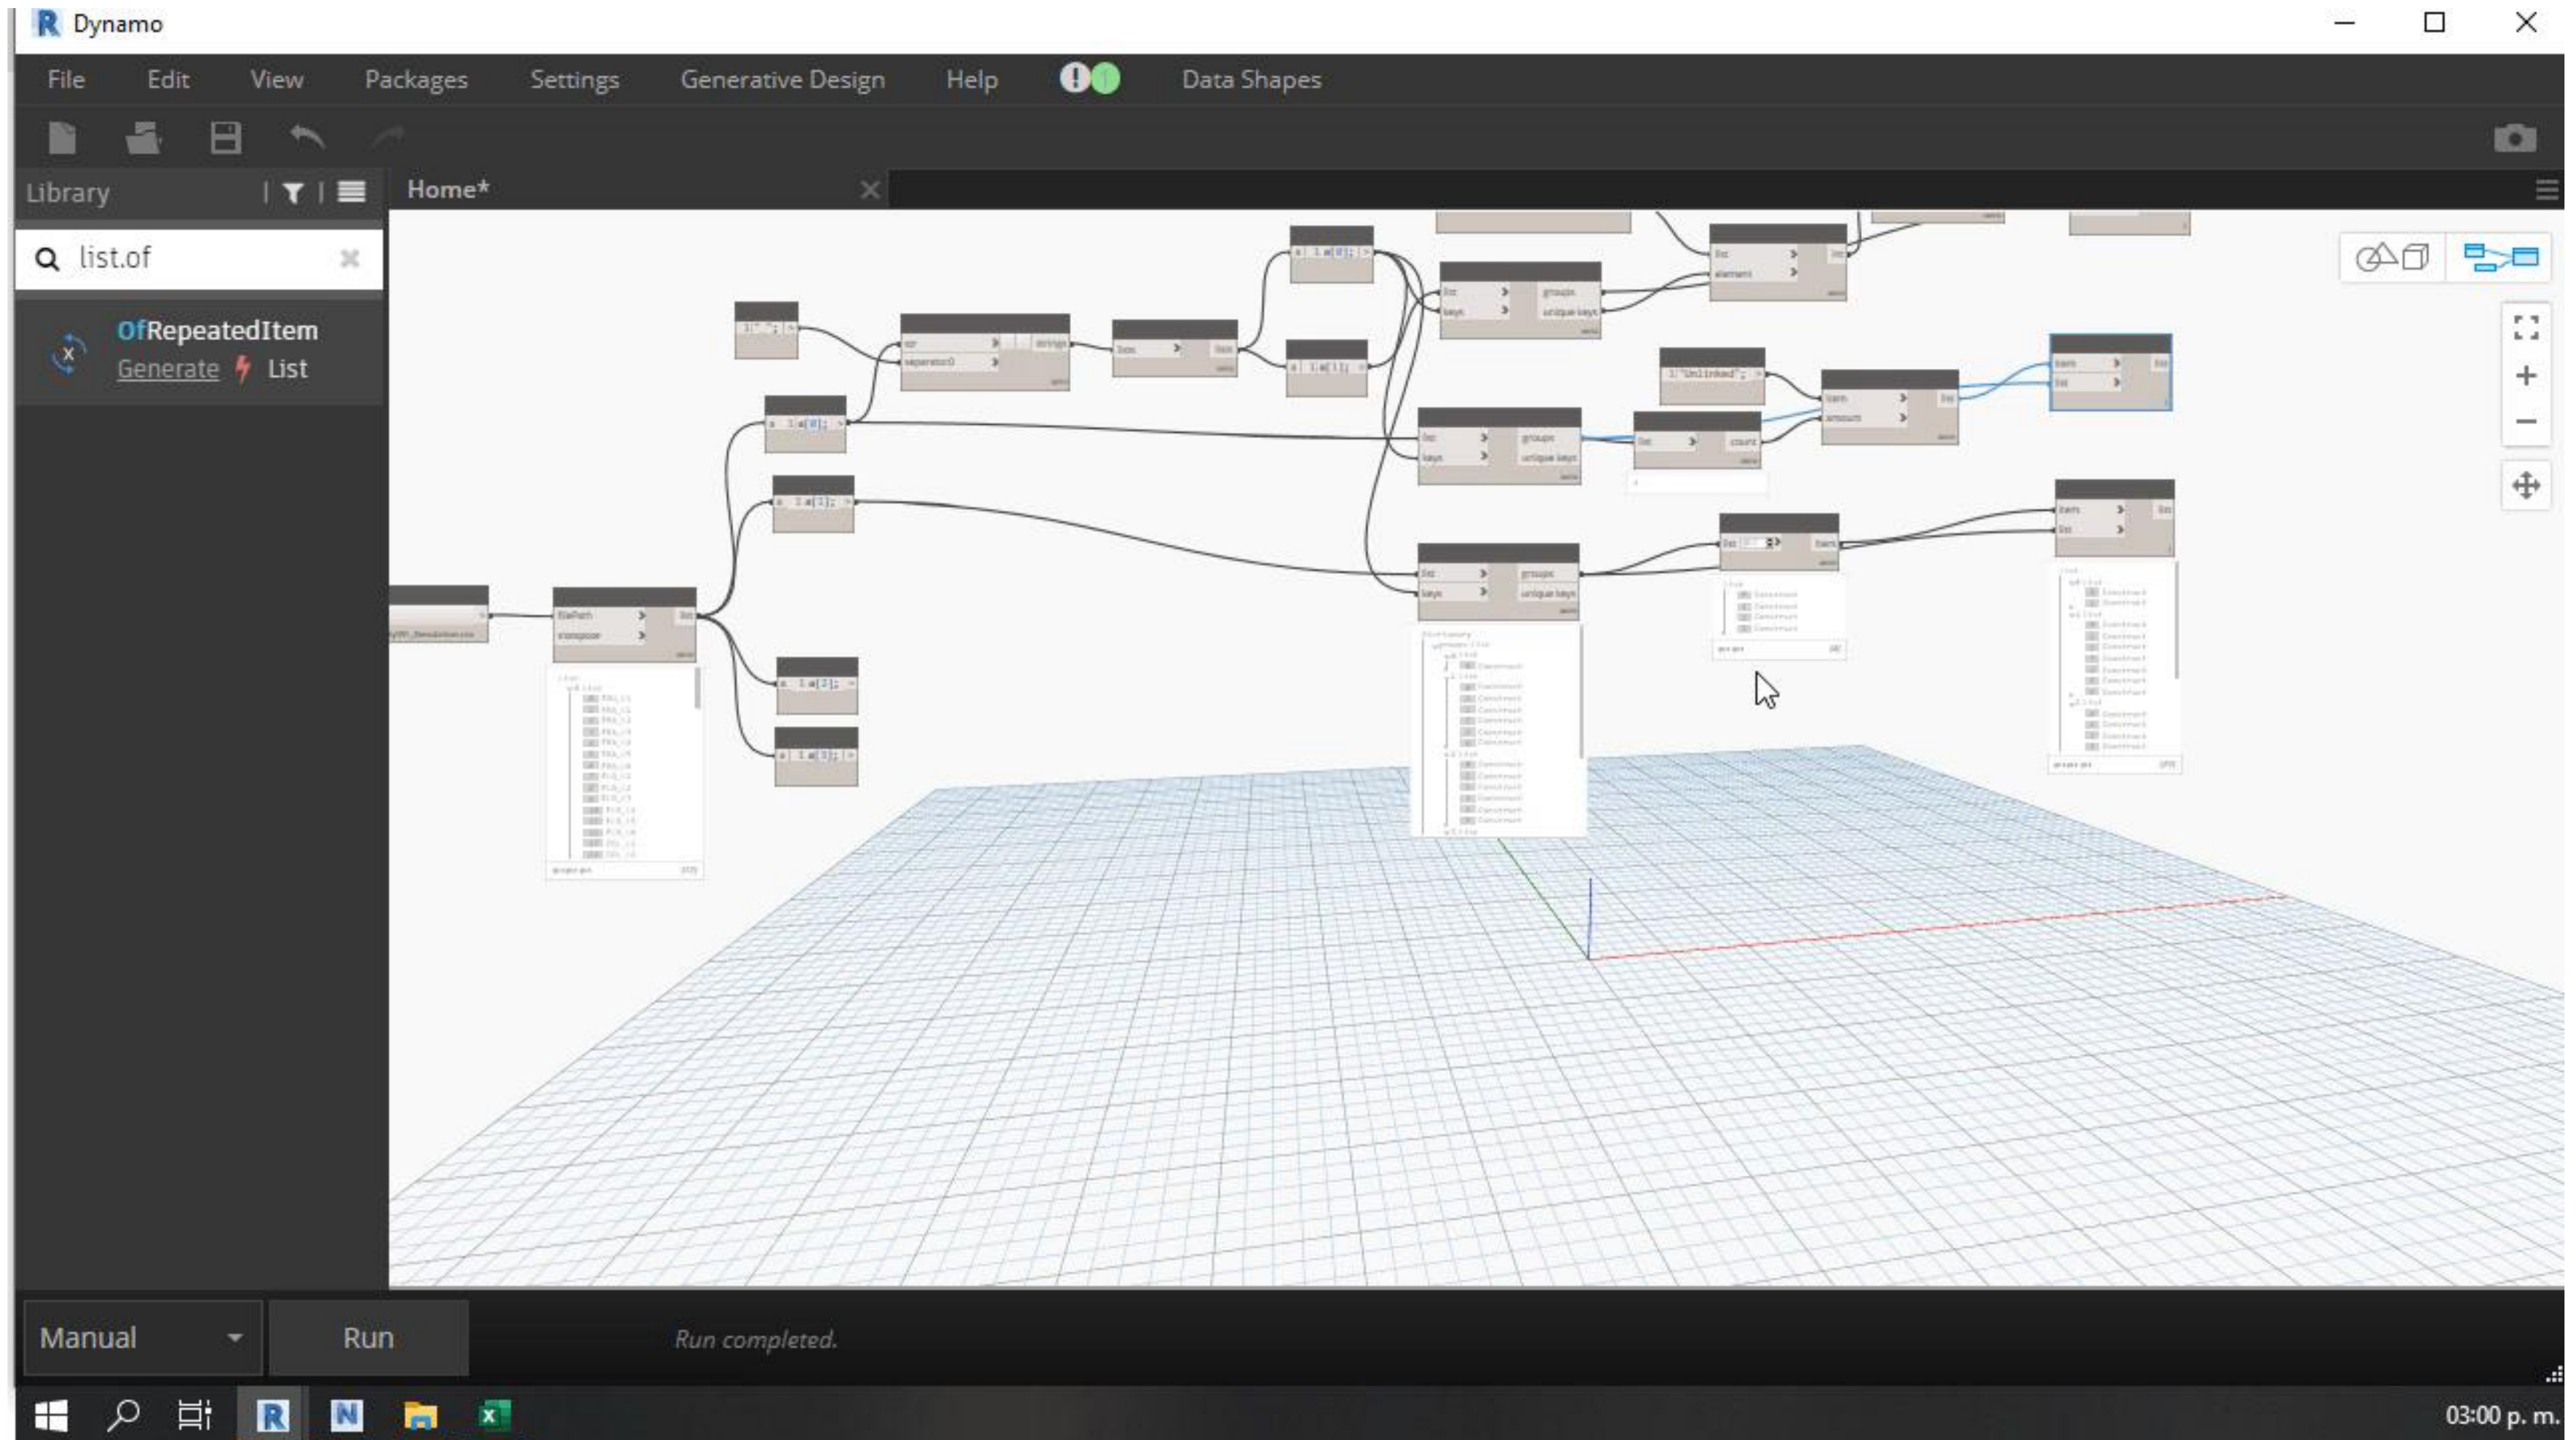

Creating a CSV Structure for MS Project

<https://youtu.be/dt7AF1msvN8>

Setting Time Constraints

<https://youtu.be/0Aet2IbVJwM>

Configuring MS Project Output

<https://youtu.be/1w59O4i5mWM>

Integrate Dynamo Player
Routines as model quality
Checkup for Construction
Management.

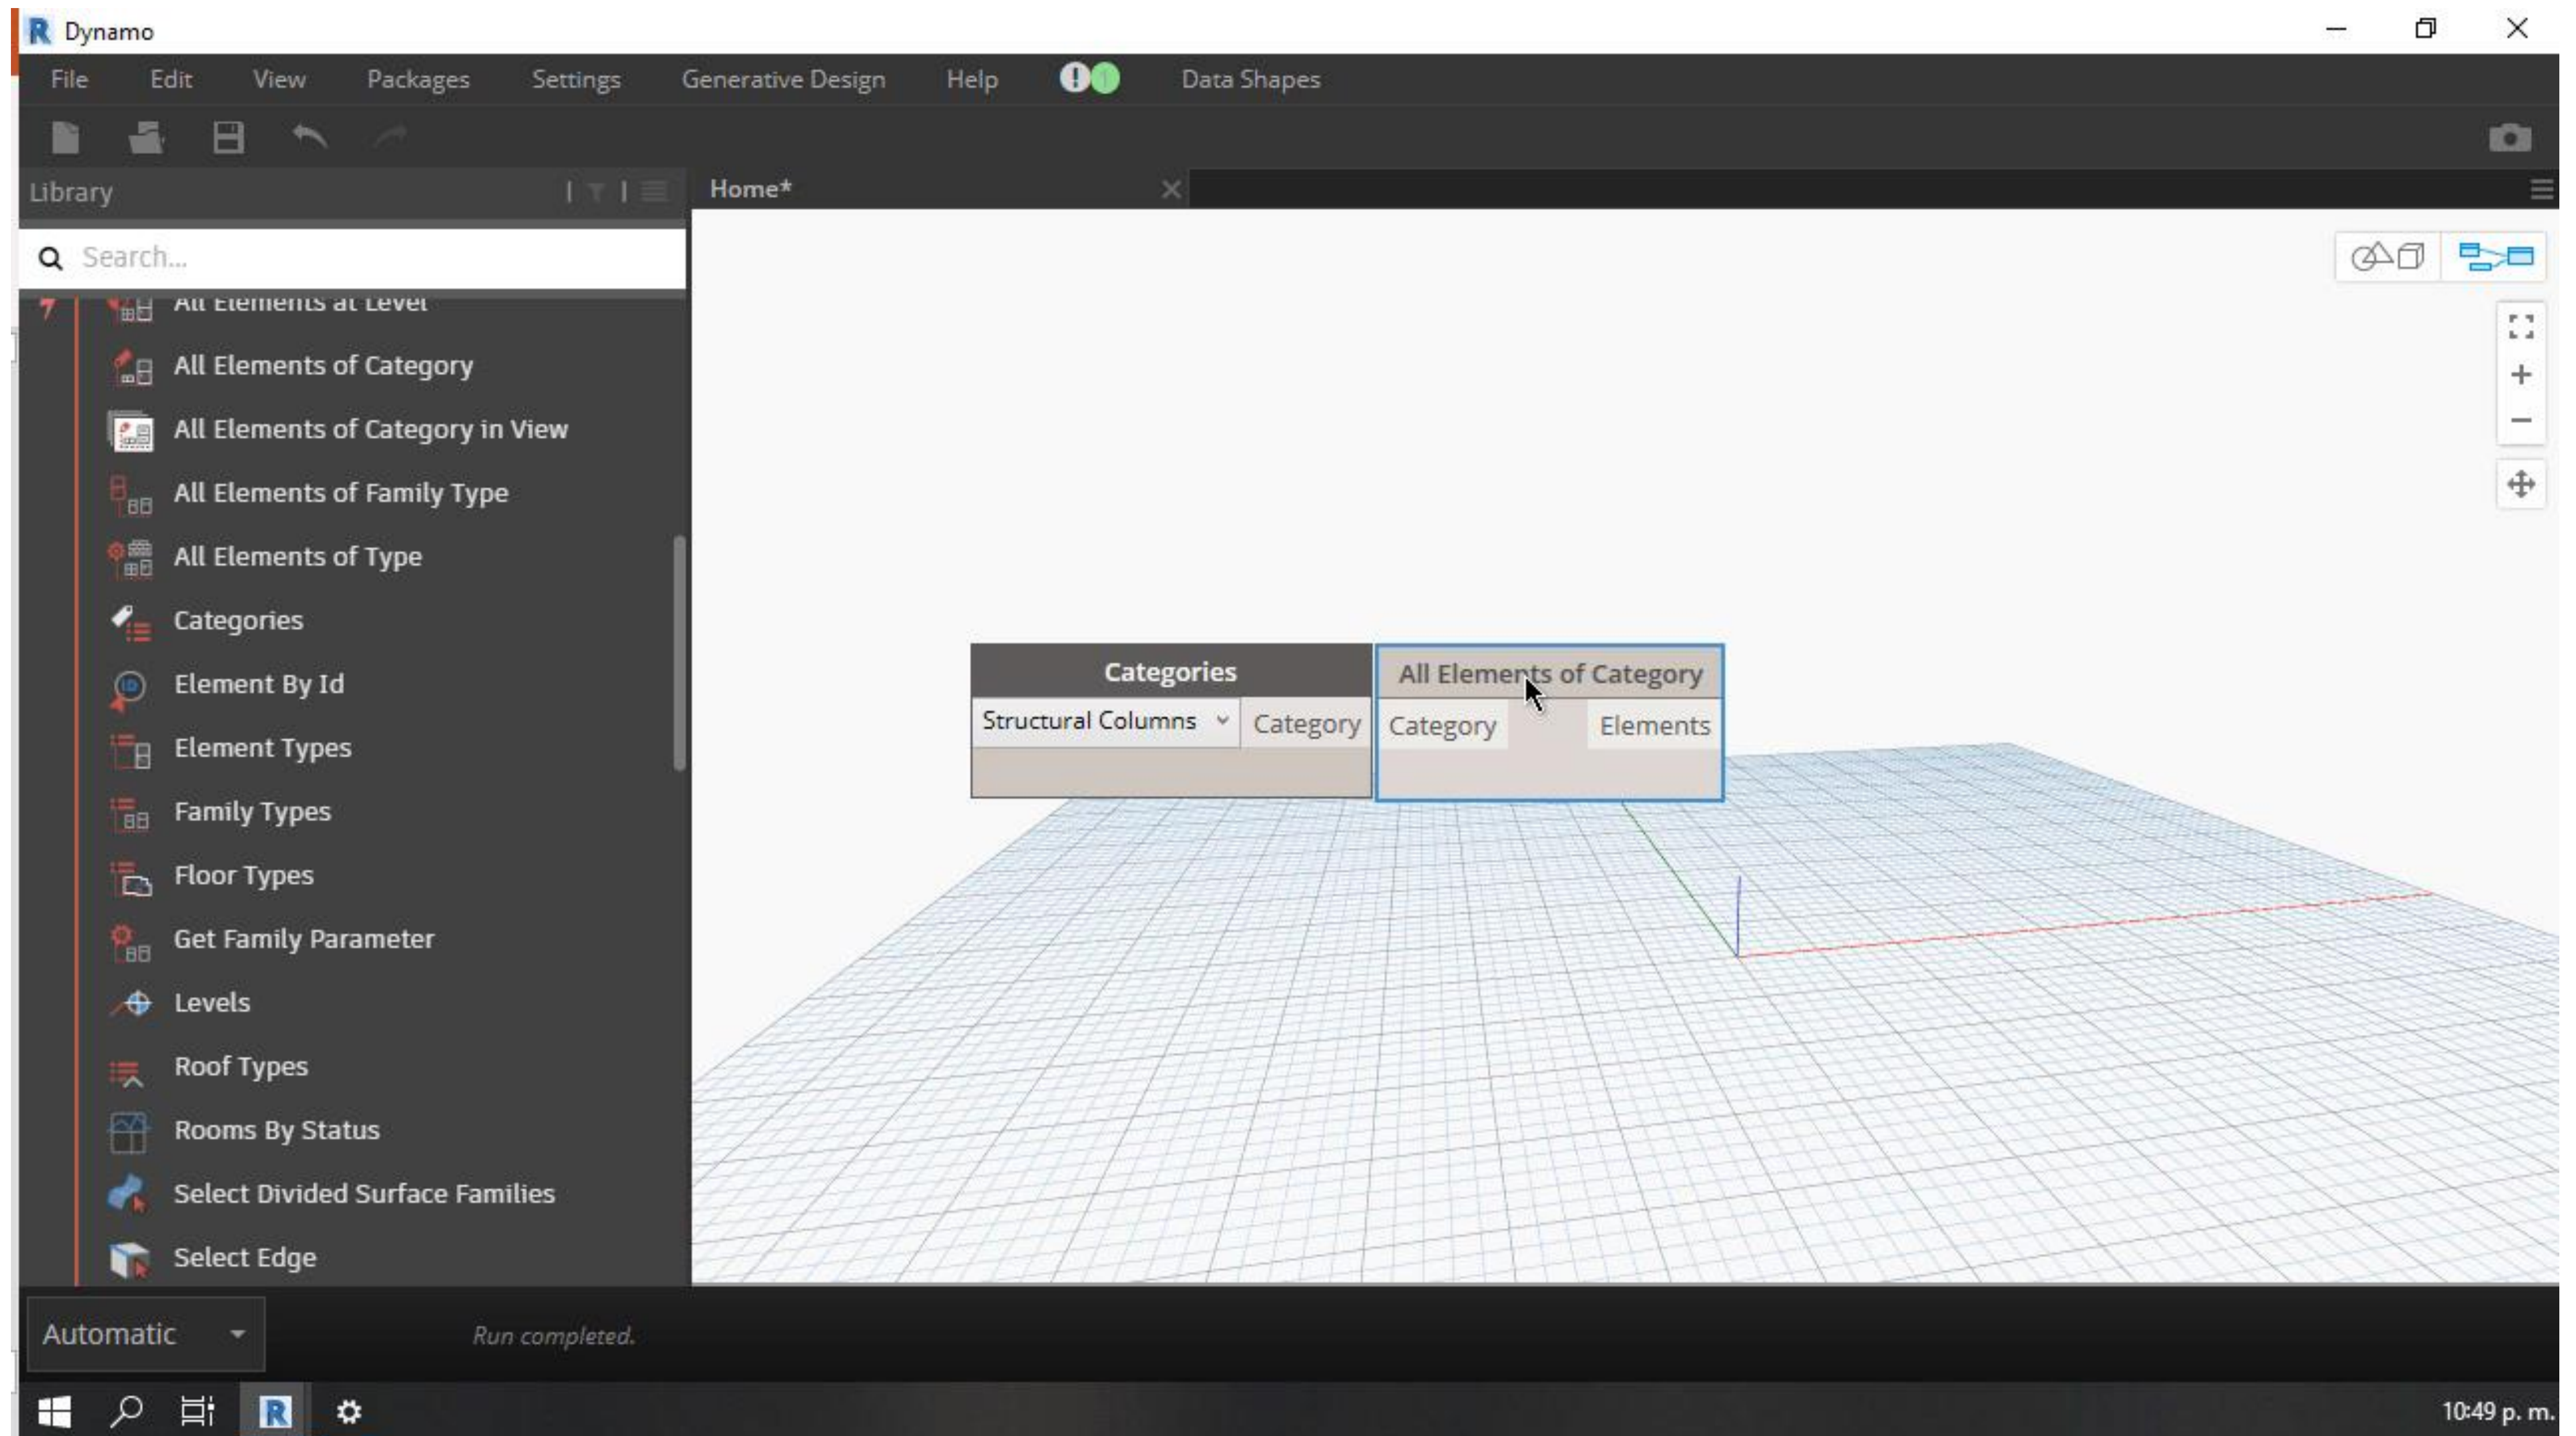

Single Dynamo Player Routines

As we have seen so far Dynamo Uses Extend widely because you can program once and use it for multiple purposes.

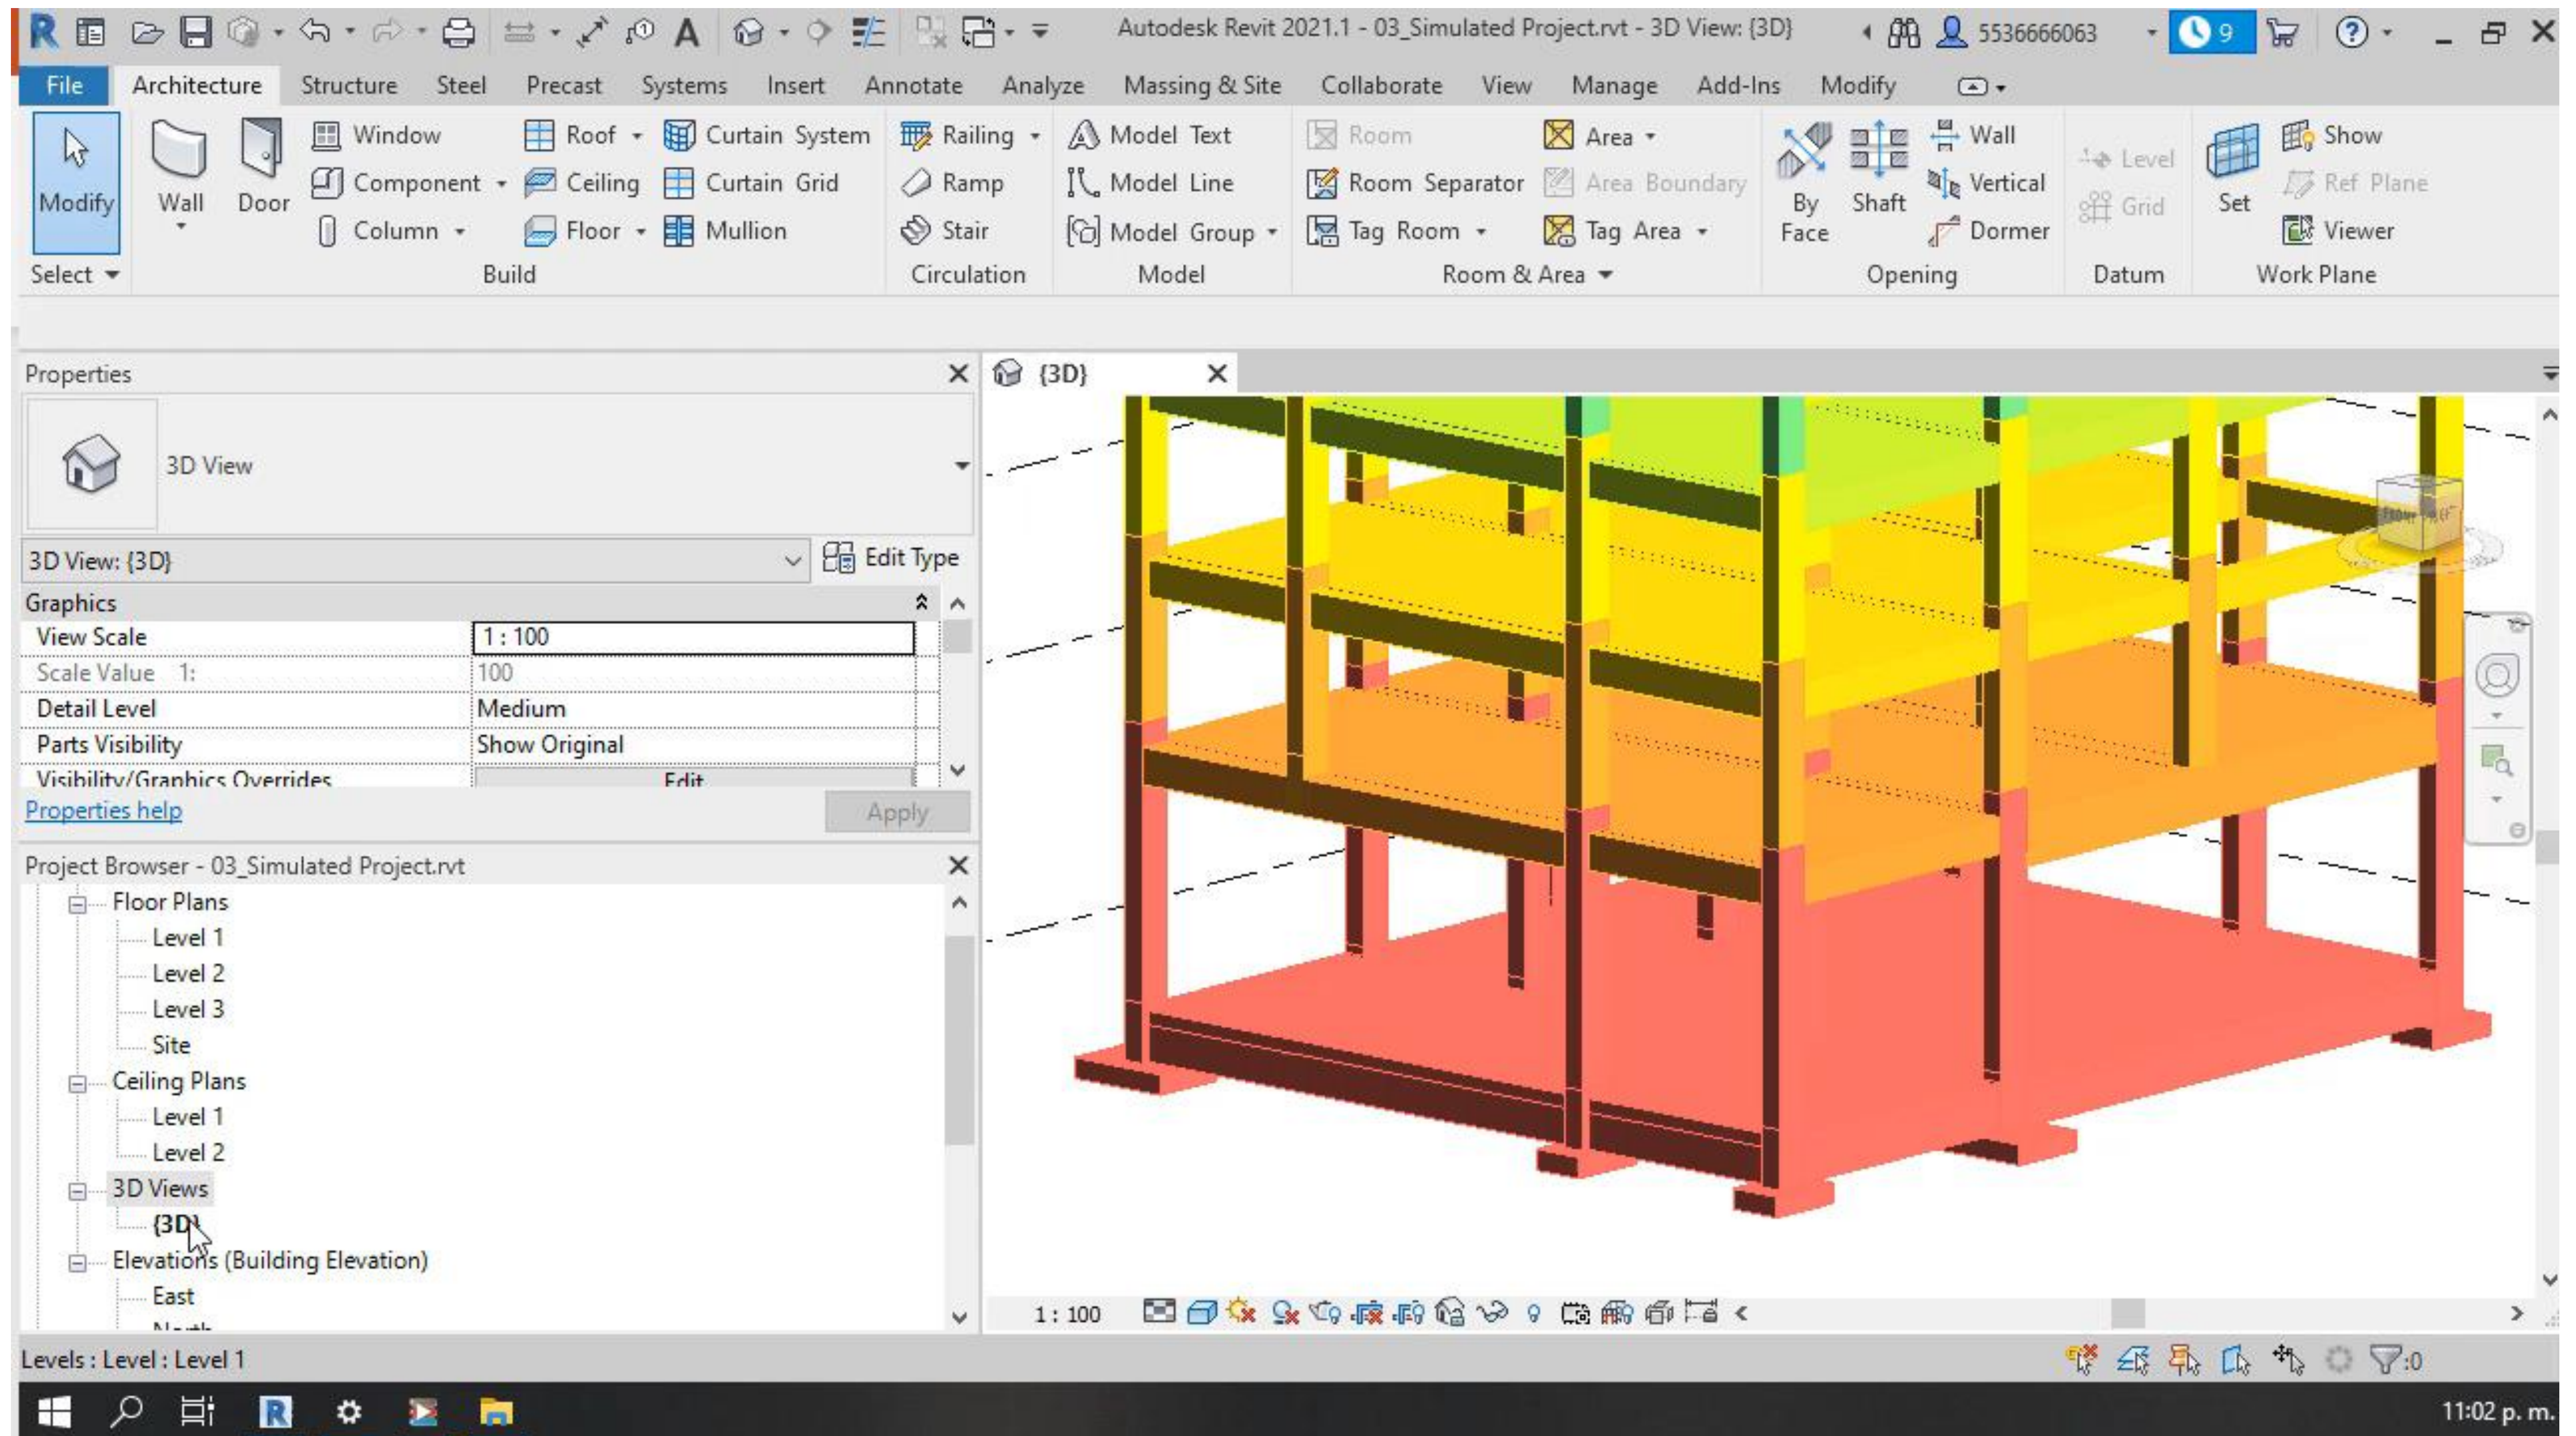

So Next seccion will use Dynamo Player for creating quality check up routines.

Coloring by Parameter or Value

<https://youtu.be/fN4WGoGSWRE>

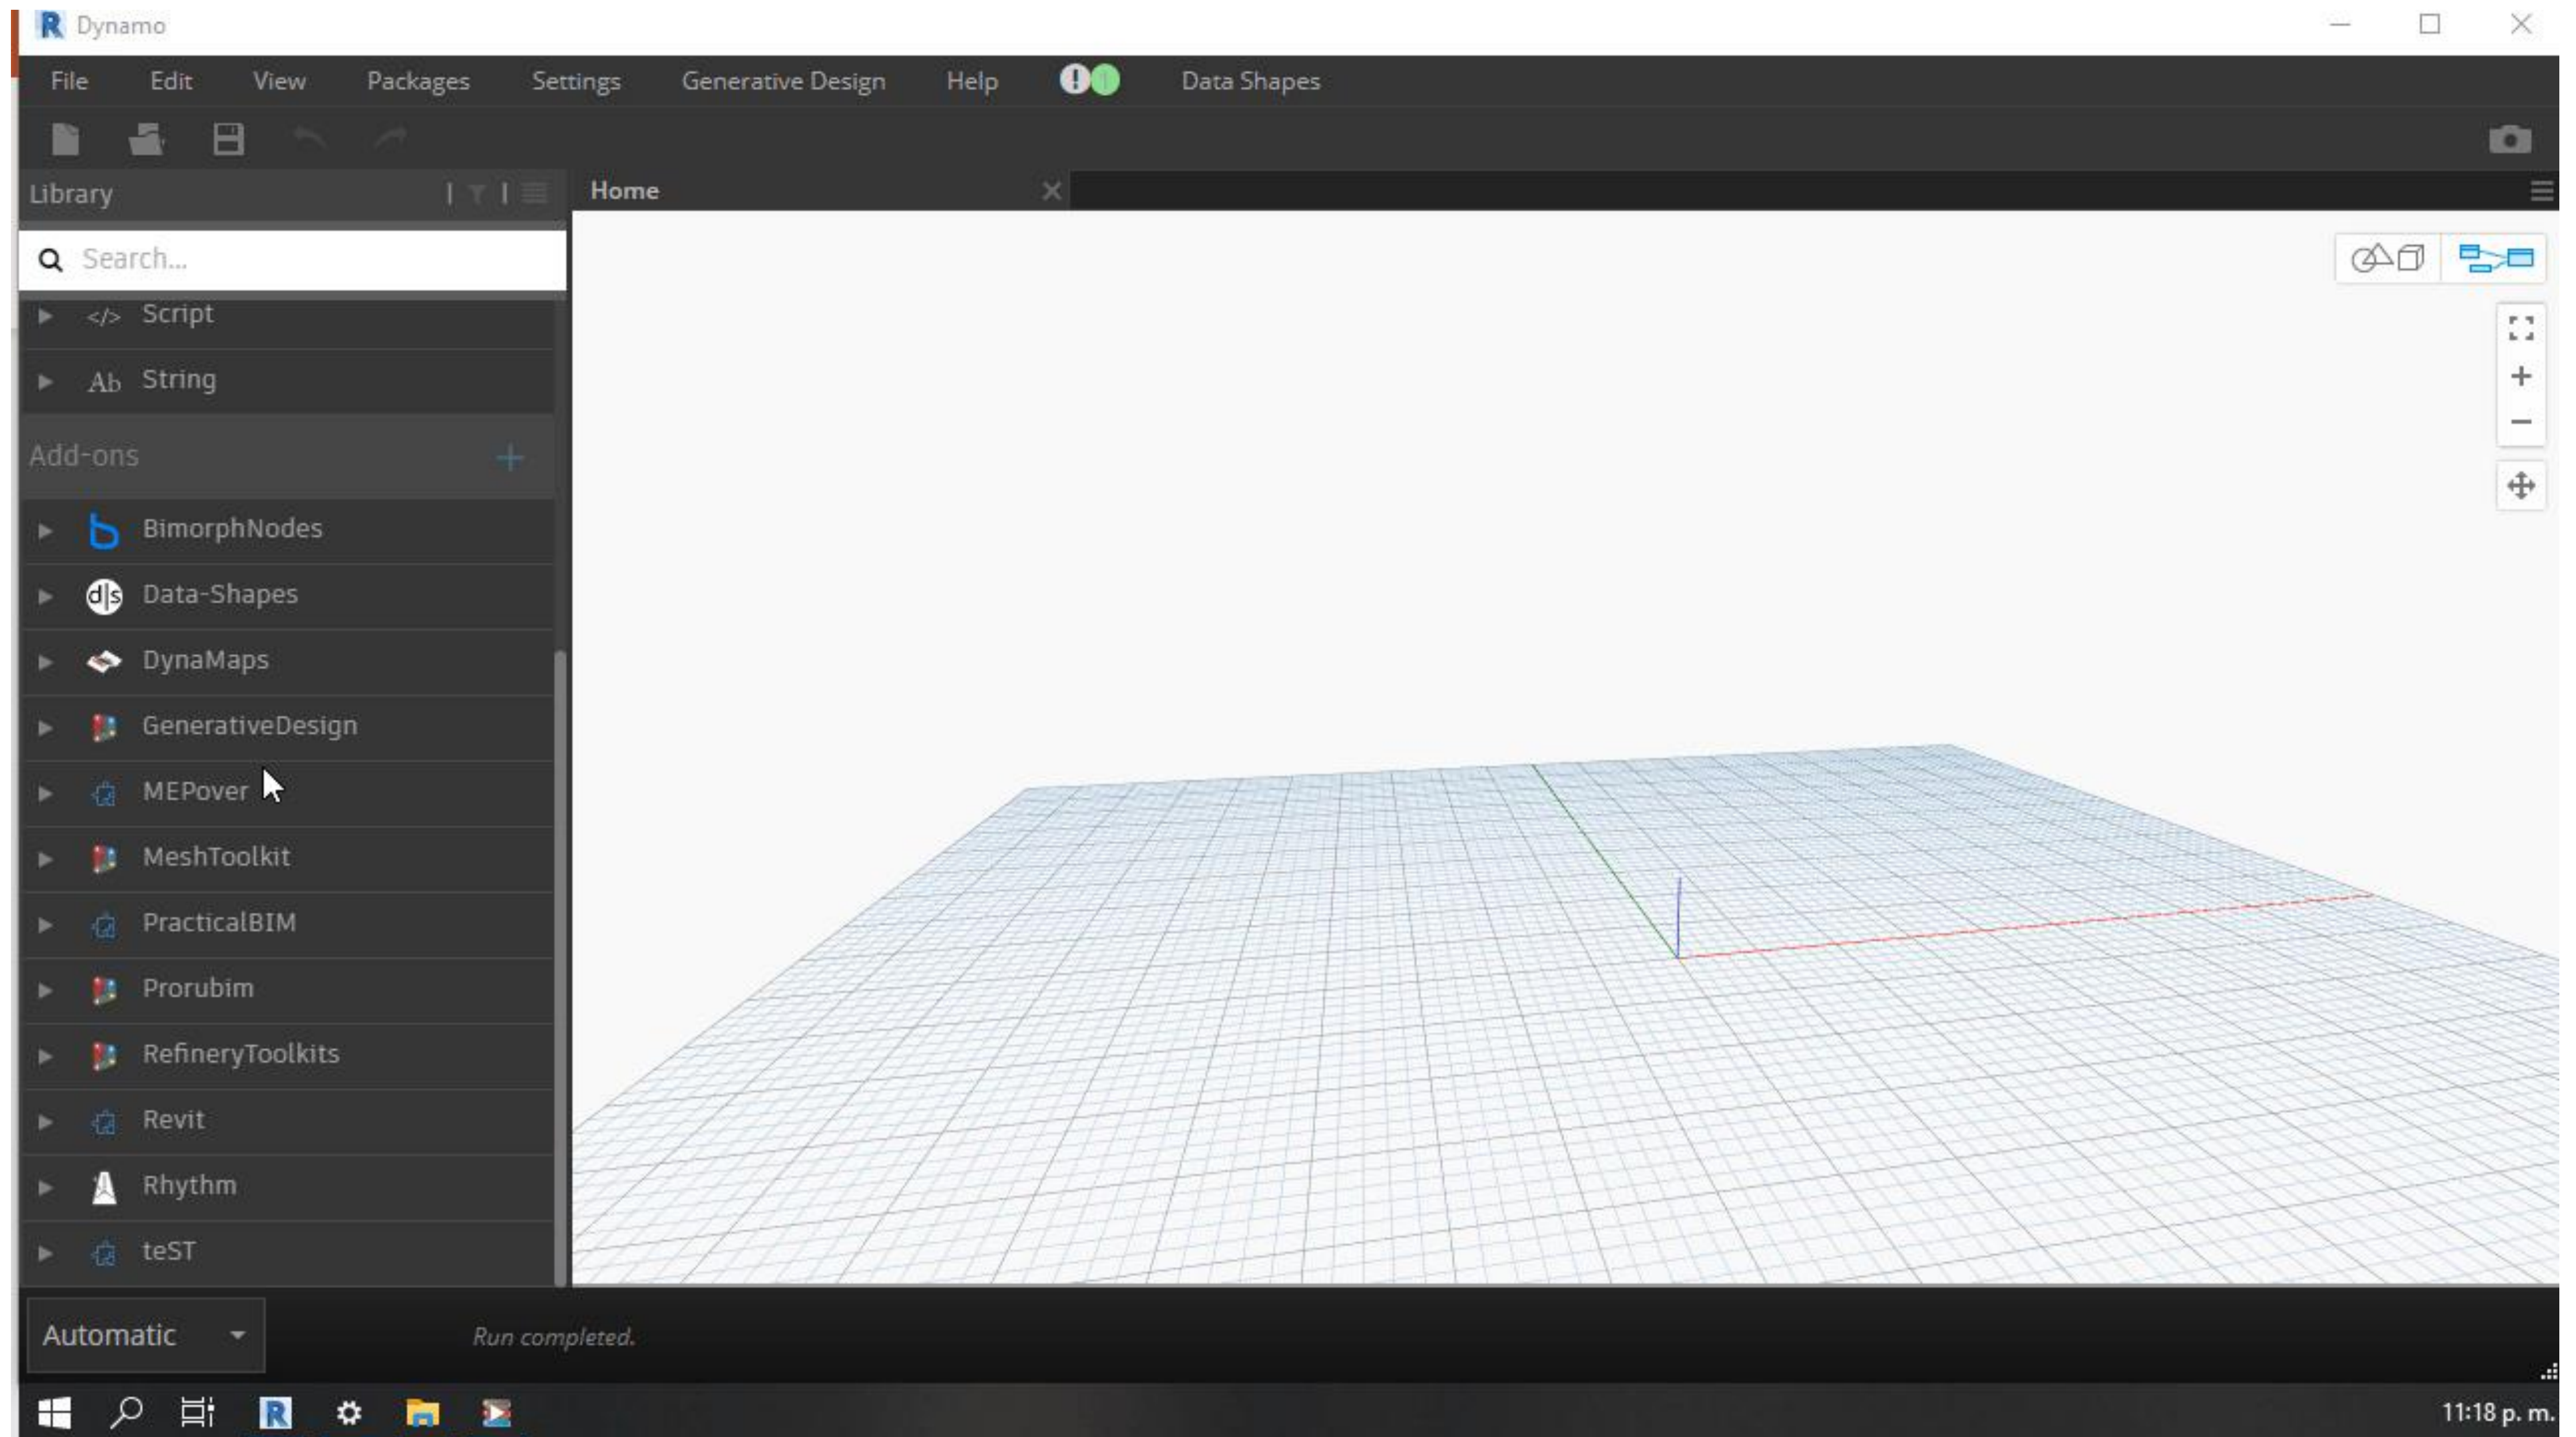

Splitting Floor Elements on the Model <https://youtu.be/MXILYXu2qIU>

Renaming Levels by Elevation

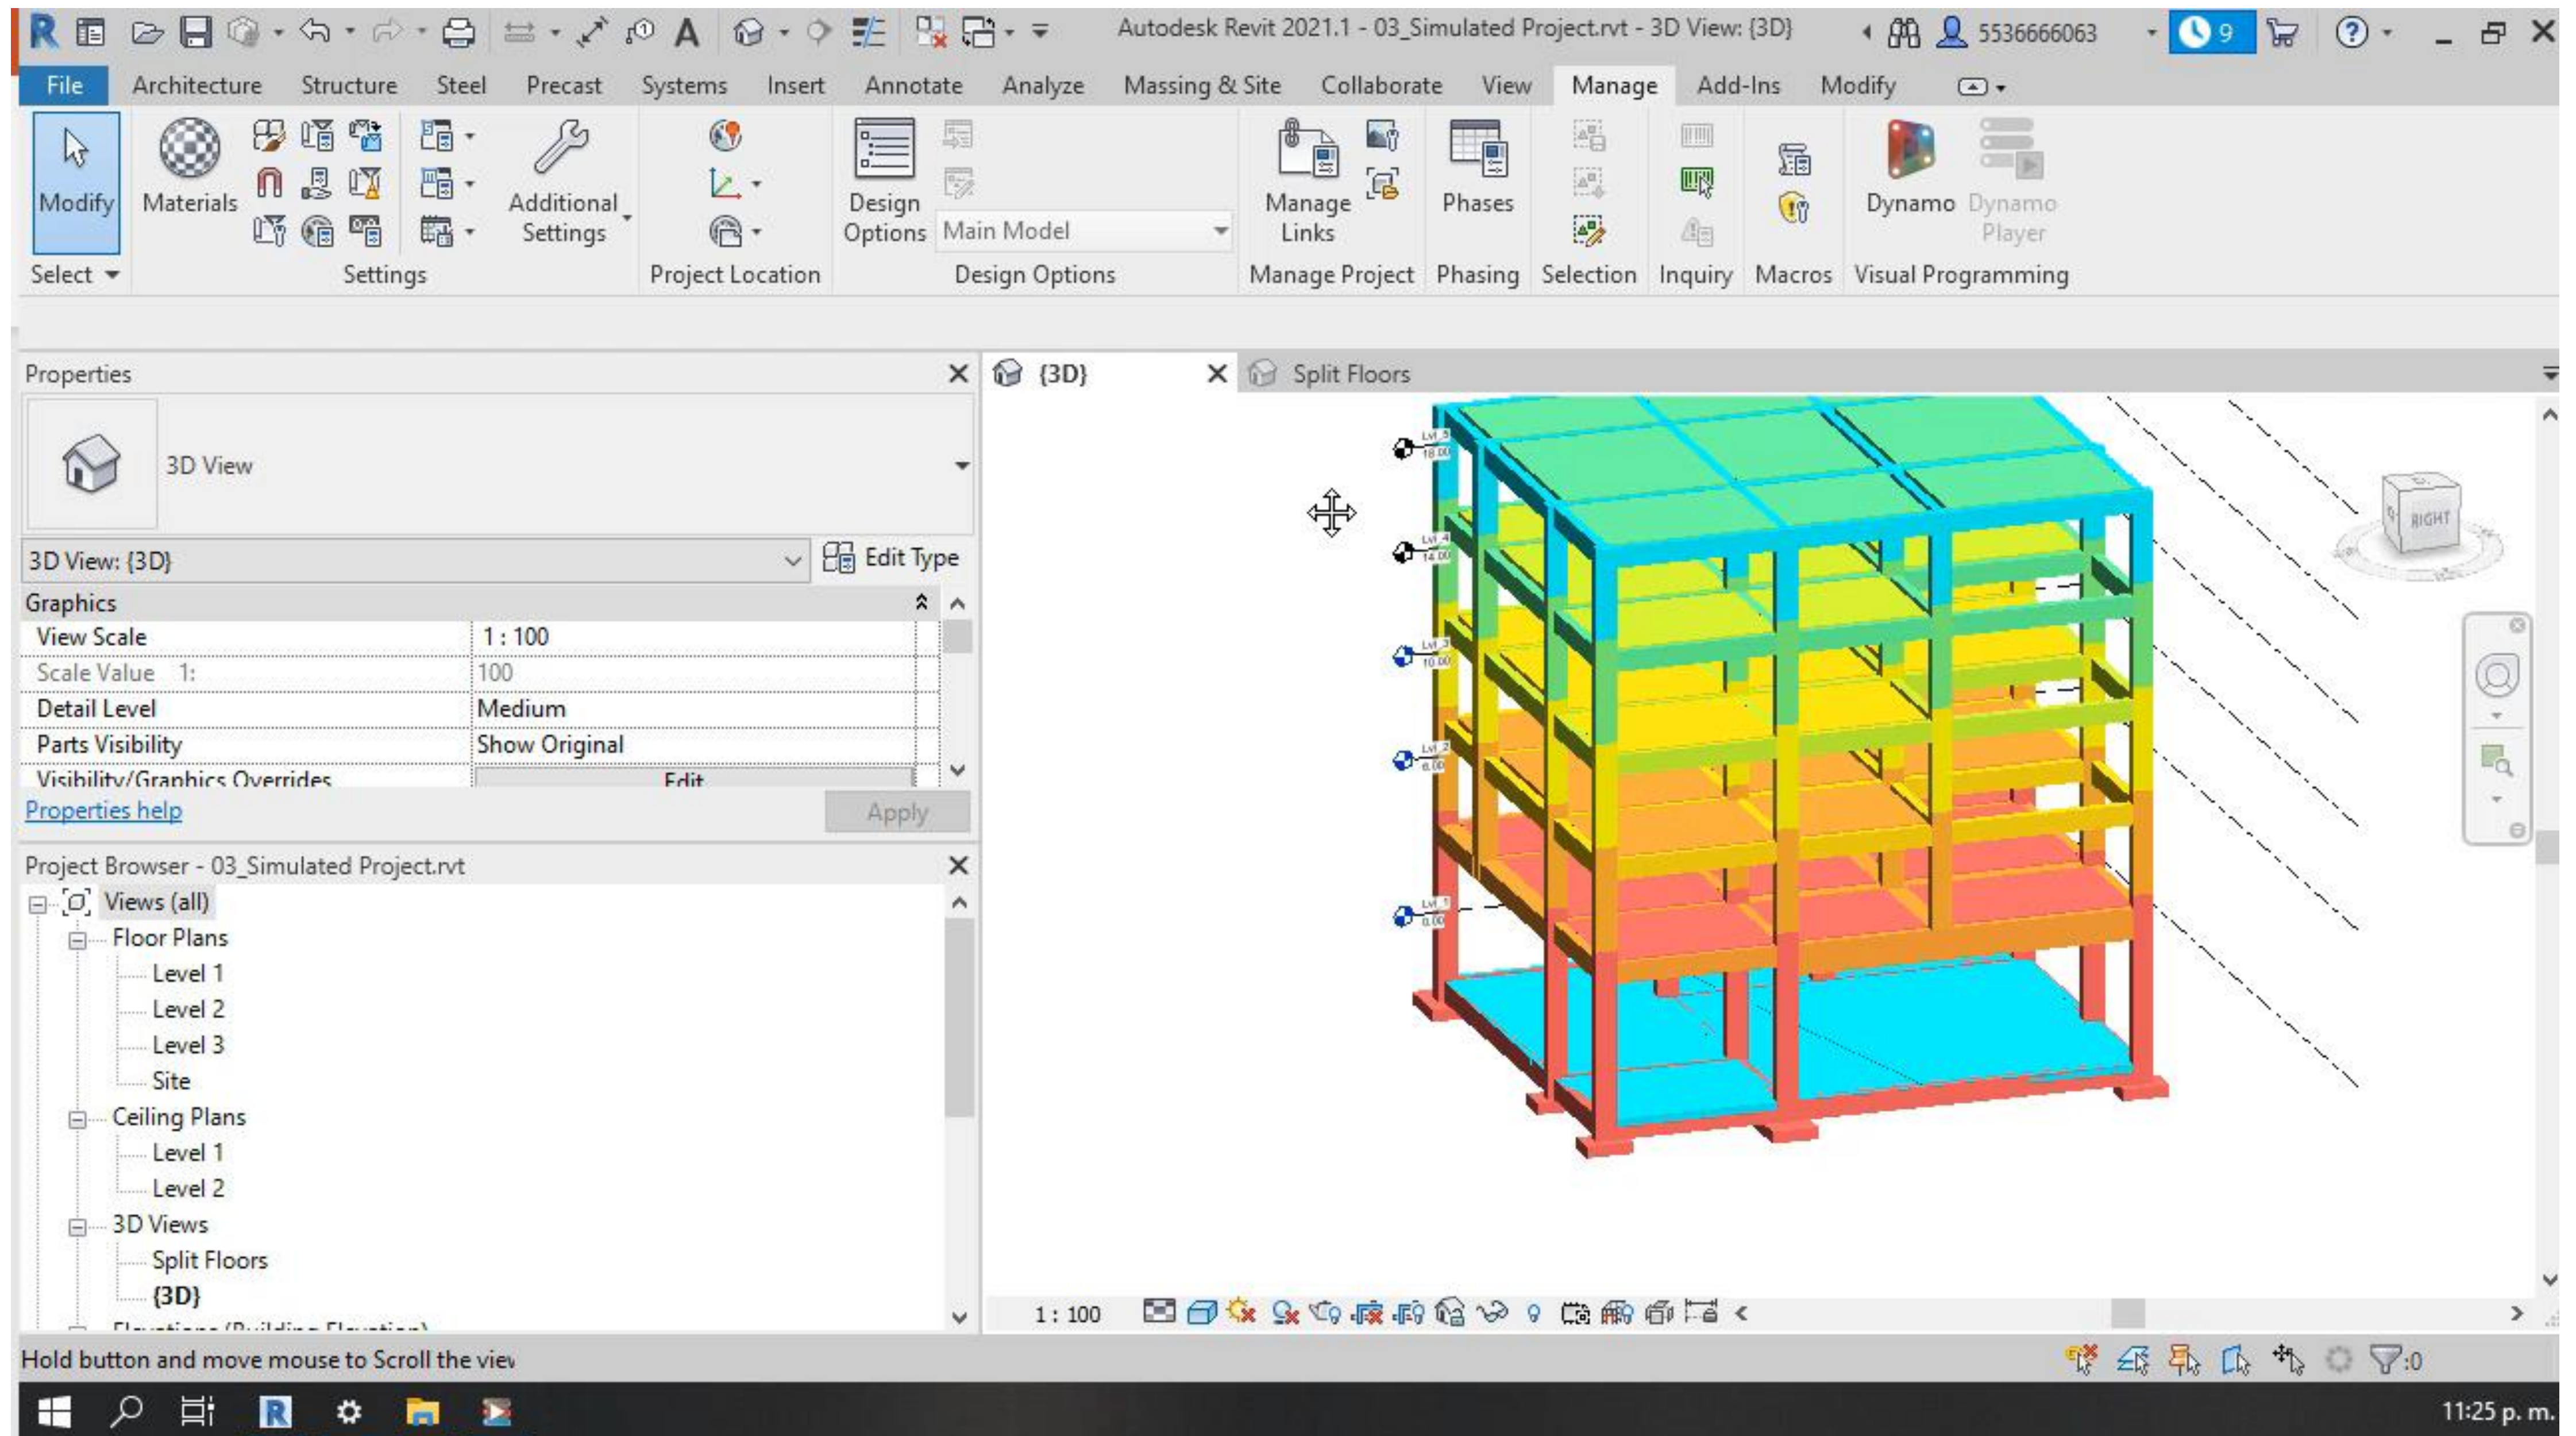

<https://youtu.be/aKsLWRveWik>

Use Time Information on Revit for Comparatives and Analysis.

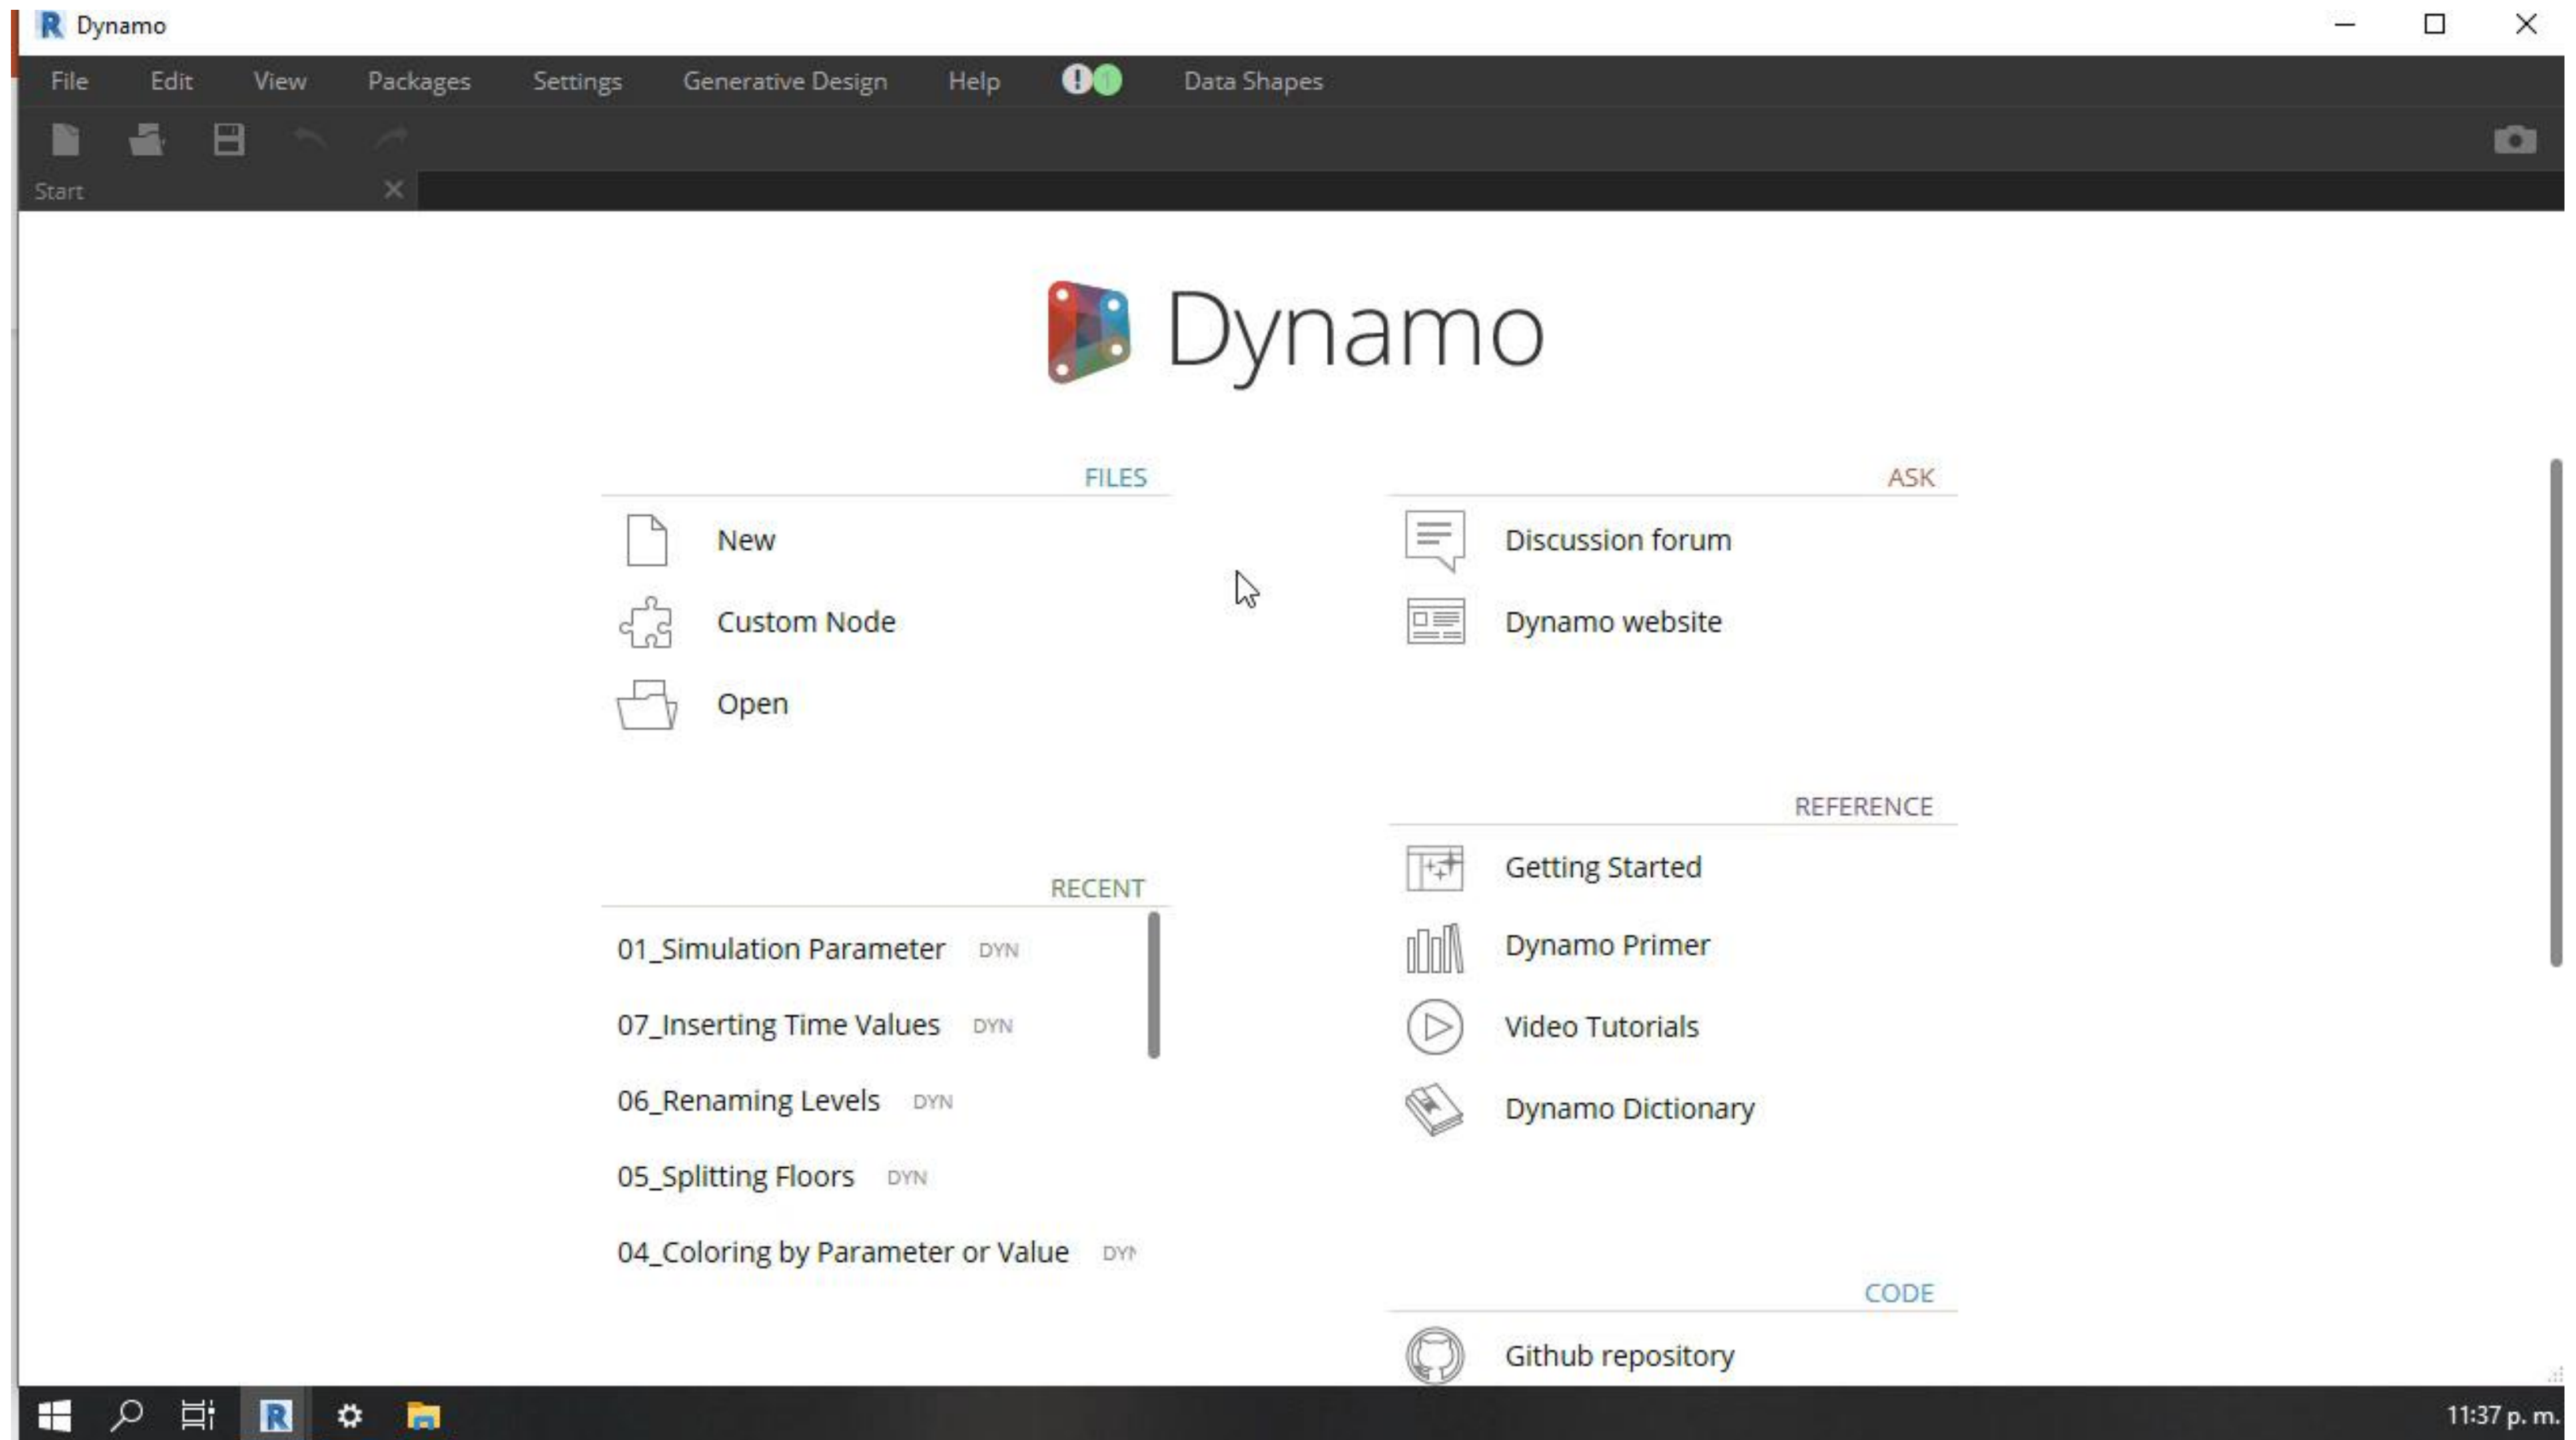

Inserting Time Information into the Model <https://youtu.be/Ttkqy4TdHfo>

Comparing time from elements.

<https://youtu.be/wo0O2zAm0ow>
