

Steel Fabrication Transfer from Revit to Advance Steel, *Under the Hood*

John Bennett

CSM Advance Steel and Graitec Solutions

About the Presenter

MY BACKGROUND

John Bennett has a structural engineering and fabrication background. He worked as a steelwork detailer then progressed to CAD manager and then moved into the role of application engineer/CSM for Advance Steel software training, sales, and implementation. He has recently been working with various companies for the integration of Advance Steel into plant engineering and structural markets.

Steel Elements Transfer Revit to Advance Steel:

Advance Steel Extension

Advance Steel Extension Revit 2020

New Extension version for 2020.

Available via Autodesk Account.

The screenshot shows the Autodesk Account interface. On the left, the 'Product Updates' link in the navigation menu is highlighted with a red box and labeled '2.'. In the top right corner, the user profile icon is highlighted with a red box and labeled '1.'. Below the profile icon, the search bar contains the text 'advance steel extens' and is highlighted with a red box and labeled '3.'. The main content area is titled 'Product Updates' and shows '2 results for advance steel extens'. Under the 'Older updates (2)' section, the first update is highlighted with a red box and labeled '4.'. This update is 'Advance Steel Extension for Revit 2020', released on April 18, 2019, with a severity of 'Medium'. The update details include: Product: Revit, Status: Live, Version: 2020, Type: Other, Size: 49.77MB, and Update ID: {6357EDD5-5634-42AA-9A2C-4785AE3A5D8D}. The description states: 'Advance Steel Extension for Revit allows you to exchange BIM data from your models between Autodesk Revit and Autodesk Advance Steel. You can export, import and synchronize BIM data from your Autodesk Revit models for structural analysis and detailing in Autodesk Advance Steel.' A link to 'View release notes' is also present.

Advance Steel Extension Installing

Steel Elements Transfer Revit to Advance Steel:

How does it work?

Revit Advance Steel Extension. – Mechanism -1

- Sections Mapping – based upon Expression rules from object shape references.
 - Sections Mapping –Use the object shape references for the profile transfer, use a Formulae entry
 - These entries are stored in the Advance steel GTC mapping database, under two tables.
 - GTC_Profile_Conversion table & Profile_Exports_Conversion

Revit Advance Steel Extension. – Mechanism -1.2

- **Sections Mapping** – based upon rules from object shape references.
 - **Sections Mapping** –Use the object shape references for the profile transfer, use a Expression Formulae entry
 - **Rule based mapping**, where a certain rule (using tokens) will allow the mapping of an entire class in one definition line.

GRA0381JB\LOCALD...xports_Conversion

GRA0381JB\LOCALD...rofile_Conversion X

	Key	Standard	Section	GTC Standard	GTC Section	ObjectType	Application	UseReqEx

I-shape Parallel Flange

B. Width: the external width of the section shape.
H. Height: the external height of the section shape.
T. Flange Thickness: the distance between the exterior surfaces of the flange in the section shape.
t. Web Thickness: the distance between the exterior surfaces of the web in the section shape.
r. Web Fillet: the radius of the fillet between the web and flange.
y. Centroid Horizontal: the distance from the centroid of the section shape to the left extremities along the horizontal axis.
z. Centroid Vertical: the distance from the centroid of the section shape to the lower extremities along the vertical axis.

Revit Advance Steel Extension. – Mechanism -1.3

- **Sections Mapping – 1 To 1 References.**
 - **1 to 1 mapping**, where each section size is mapped individually.
 - All manual mappings requested by Advance Steel or Revit during import are saved in the database for further use as one to one mapping.
 - Mapping configuration can be made country-dependent; this allows specific selectable country mapping during import / export.

	3396	CISC Angle Shapes	L76X64X13	CISC Angle unequal	L76X64X12.7	2	10	0	NL

*Tip : In order for the country column to be used in the transfer, the version column must be filled with a value, inside the **GTC_Profile_Conversion** and **Profile_Export_Conversion** tables of the **GTCMapping** database.*

Revit Advance Steel Extension. – Mechanism - 2

- Revit Family based section mapping (up to RVT 2019)
- This process uses the **internal Section name** inside Advance Steel links it to the Approved Revit Family.
- The link is via the Section class and the key is the **“Name”**
- These families contain 2 parameters:
 - **Family Name Key ,Section Name Key**
- Table inside AstorProfiles database, called RevitASProfileConversion

Type	Plastic Modulus strong axis	Plastic Modulus weak axis	Torsional Moment of Inertia	Warping Constant	Principal Axes Angle	Section Name Key
(all)	(all)	(all)	(all)	(all)	(all)	(all)
W44X335	1620.00 in³	236.00 in³	74.70 in⁴	535000.000 in⁶	0.000°	W44x335
W44X290	1410.00 in³	205.00 in³	50.90 in⁴	461000.000 in⁶	0.000°	W44x290

Parameter	Value
Warping Constant	143000.000 cm⁶

Revit to AS – Basic Section Transfer (2019)

Revit Advance Steel Extension. – Mechanism – 3

- **Custom Profiles Mapping as Dynamic (Upto RVT 2019)**
 - This is for profiles that are from approved Structural family shape references, but do not exist in Advance steel, the Profile is mapped as Dynamic type.
 - This method places a profile inside advance steel model, it is not added to the Advance steel database.
 - **2019 Change** , this mechanism is used as the basis for the Steel Fabrication Format introduced for connection and fabrication elements like plates, welds and bolts. Along with new cuts and copes.

Type	Description
C	Channel Cold Formed
CEx	Channel with Fold, Cold Formed
F	Flat
H	Rectangular Hollow Section
I	I Shape
IAsym	I Shape Asymmetrical
LA	Angle Cold Formed
LZ	Zed Cold Formed
R	Circular Hollow Sections (Pipe)
S	Round Bars
T	Tees
U	Channel
W	Angle

Tip : Dynamic profiles are transferred in Advance Steel and saved inside the model. There are no entries created inside the AstorProfiles.mdf

[Revit Dynamic Profile Transfer help](#)

Revit to AS – Dynamic Transfer - 2019

Steel Elements Transfer Revit to Advance Steel: *Materials and Families in RVT/AS.*

Revit Advance Steel Extension. – Materials

MATERIALS MAPPING

- Materials Mapping – uses the AEC materials in Revit as a Basis.
- Link is via a materials table in the GTC Database inside AS.
- New materials can be created and then mapped between platforms.

	Key	Material	GTC Material	Application
	20057	Steel 64-460	64-460	10
	20058	Steel 55-450	55-450	10
	20059	Steel 55-430	55-430	10
	20060	Steel 55-415	55-415	10
	20061	Steel 51-275	51-275	10
	20062	Steel 50-355	50-355	10

Note : AS to Revit will create a material if not found in Revit Material browser

*Tip : Materials Mapping – creating new material in Revit, note that and explain to detailer, they can create corresponding materials in Advance steel, to help the mapping dialog. Use **the Key Name in AS** if known, make **key name same as Revit MATLs**.*

[Revit AS Extension Mapping help link](#)

Revit to AS – Materials Mapping

Revit Approved Families

FAMILIES LOCATIONS - 2018

- These are the ones with the Section keys.
- Linked to standard structural shapes in Revit and Advance Steel
- Approved families found via blog link, to into Revit 2018.1
 - Revit 2018.1 update

Structural Section Shapes in Revit

FAMILIES 2019/20

- Only Structural steel columns and framings are supported in the Steel fabrication workflow.
- Framing Elements need to meet a series of requirements for the steel fabrication workflow
 - Material for Model Behaviour parameter - must be set to Steel.
 - Section Shape parameter must be set to a supported shape.

Supported Structural Steel Shapes and Families for Steel Fabrication 2019 Steel Shapes 2020

Tip : Try To use the approved families for Revit Structural beams and columns , these are the only ones with the Section keys.

Help: Family And Category

Revit Family Creation – Slide 1

Revit structural family creation

Ensure Structural Framing & Columns are created exactly as shown in the following links

[Hot rolled steel shape dimensions](#)

[Cold formed steel shape dimensions](#)

[Steel \(other\) section shape dimensions](#)

Advance Steel user section creation

Create user sections as the link below, we recommend matching the orientation of the Revit families

[Creating user sections](#)

C Profile with Lips

Revit Family Creation- Slide 2

PROFILE DEFINITION

Using CEE with Lips as example:

Please ensure that all sketches are created Exactly as shown in image, for example in the cold rolled section "C Profile with lips" the width (B) is defined horizontally, your sketch must define with width horizontally otherwise when exported to Advance Steel the section will be rotated.

MATERIAL BEHAVIOUR

In The properties definition , ensure that the material for

Model Behaviour is set to **Steel**

[Revit Help: Specify Family Category and Parameters](#)

FAMILY STRUCTURAL GEOMETRY

The dimensions will be populated automatically, to allow steel connections and the dynamic export to Advance Steel to work the Structural Section Geometry needs to be defined. We can link these to the dimensions by imputing the dimension parameter into the Structural Section Geometry formula

Materials and Finishes		
Structural Material (default)		
Dimensions		
B	50.0	= B
H	70.0	= H
h1	10.0	= h1

Steel Elements Transfer Revit to Advance Steel:

Steel Tools in Revit.

Revit – Steel Connections – 2017/8/9/20

- **Steel connections**
- Available as a additional download and install to the Revit 2018 platform, from your Autodesk account
- **Revit 2019/20 – Steel connections are installed with the delivery.**
 - Now found on the **Steel Ribbon tab.**
 - Also on the Structure Tab.
 - 130 no standard connections

- **Transfer as part of the SMLX.** (We see the new “steel Fabrication format” come into play.)

[Revit Structural connections help](#)

Revit – Steel Tools – 2019/20

STEEL TOOLS 2019/20

- New Steel Ribbon. With Tools for **NOTCH** (Cope), Miter, shorten, and many other options
- Revit Elements change when using these Tools to **Steel Fabrication format.**
- With 2019, these New tools, replicate the tools that we already have inside AS, a clear message for connection collaboration.
- Also the Ability for custom connections now added via this new development.

Tip : Blog post, Gumby's Article on LinkedIn.

[Graitec Blog - New tools in Revit 2019](#) , [Stephan's LinkedIn Article](#)

Revit to AS – Steel Fabrication Format 2019

Revit to AS - Steel Fabrication Element Transfer.

- **Steel fabrication Transfer method 2019**

- With 2019, The Copes/Cuts/Shortens are now transfer via the Steel fabrication elements. This is taken into the SMLX via this format.
- This works with the Steel Fabrication Format, transferring the Structural Beams as the Steel fabrication Shape into Advance Steel With the Connections.

Note: Any structural framing or column, exported from Revit or Advance Steel that has an associated cut in the SMLX file, will be imported in Revit as a structural framing or column with a [Steel fabrication shape](#).

[Revit 2019 Supported Structural Steel Shapes and Families for Steel Fabrication](#)

[Revit 2018 Supported Structural Steel Shapes and Families for Steel Fabrication](#)

Note: the 2018 method is Different, the supported list is different, this is a new approach in 2019/20.

Tip : Note that this is New format for 2019, SMLX is different structure in 2019 to accommodate the change in Shape format and connections. Note fabrication shape displays the exact shape of the element and the process of creating it is irreversible

[2019 Steel Fabrication Element Transfer](#)

[2020 Steel Fabrication Element Transfer](#)

Steel Elements Transfer Revit to Advance Steel:

Template Ideas for Modelling

Revit – Template Ideas. Slide 1.1

- **Template : Creation elements**

- **Origin** - In AS, try to model about the 0,0,0. modelling in Revit at this reference makes the transfer easier.

- **Levels**

- Use them, place beam on them, they are transferred providing they have Beams elements on them
- Try not to use large offsets for beams, affects in the transfer.

- **Grids**

- **Transferable**, but watch if coming from AS, as you only need the level 1, multi levels used in AS, can lead to confusion.

- **Steel Sections/Families**

- C:\ProgramData\Autodesk\RVT 2019\Libraries\UK\Structural Framing\Steel\British Standard
 - Personal View –load the correct country libraries, all of them, just makes it easier to model steel in Revit.

Revit – Template Ideas. – Slide 1.2

- **Template : Creation elements**
 - **Steel Connections** - just load them all, is easier, then use search feature.
 - Create new instances and store them in the template (2020 option)
 - **Steel Materials** – there are some in the system, by default Revit is mapped to AS via the AEC materials, but you can add you own, If you have access to steel guide then look, if New materials, Create the same in AS.
 - **Level of Detail** - Set this to Fine to see the connections and Steel shape correctly.
 - **Colours** - Revit is different to AS, New users need to get to grip with materials and also Visual graphics and the overrides.
 - Personal view, try to make the steel and connection elements different base colours, just helps to see them in model.
 - When creating materials, use this as the basis to change the colour for steel, if working with AS, try to match what you would expect to see.

Tip: when you create your template, then add it to you list of preferred templates, so selection and use is easier.

[Revit Help - Setting you default template adding to list](#)

Advance Steel – Model Settings.

- **Management Tool Settings**

- **GTC AS Defaults Settings-** Change this (UK) so you do not need to number the model before the export.
- **AS Levels**– Use levels in the project explorer, if working with Revit, attach beams to levels, the levels are transferred into Revit.
- **Origin** - In AS try to start your model at the WCS , 0,0,0 position, this helps when transferring to Revit. As the levels are based around that reference point.

Steel Elements Transfer Revit to Advance Steel:

New Features in RVT 2020

New Features and Enhancements

Autodesk Revit 2020

Connect

- ✓ PDF Into Revit
- ✓ Publish Cloud Model on Revit Home
- ✓ Cloud Models for Revit Update
- ✓ Support for Sketchup 2018 Import and Link
- ✓ Revit Extension for Fabrication Exports

Create

- ✓ Elliptical Walls
- ✓ Improved Rebar Copy & Move Logic
- ✓ Multi Rebar Annotation to Concrete Faces
- ✓ Multi Rebar Annotation for Free Form Rebar
- ✓ Rebar in Model-in-place Stairs
- ✓ Steel Connections Propagation
- ✓ Steel Connections Grouping
- ✓ Tags & Dimensions of Steel Elements
- ✓ Electrical Homerun Wiring Improvements

Optimize

- ✓ Path of Travel
- ✓ Improved OR in View Filters
- ✓ Material Appearance Improvement
- ✓ Material User Interface Improvements
- ✓ Image and PDF improvements
- ✓ Tag, Schedule and View Filter for Elevation
- ✓ Track and Edit Scope Box Parameter in View List
- ✓ Copy and Paste Legends Across Sheets
- ✓ Create Parts from Imported Geometry
- ✓ InfoCenter Reduction
- ✓ Dynamo 2.1 Ships with 2020
- ✓ Steel Connections for Dynamo
- ✓ Enhanced Performance for Detailed Steel Models
- ✓ Additional Parameters for Steel Components
- ✓ Electrical panel feed through lugs connection
- ✓ Change Service Improvements

Revit 2020 to AS2020 – Basic Transfer

The extension exports models using only the Rule Based Mapping Transfer. The **Revit Family Based Mapping Transfer** and the **Dynamic Profile Transfer** types were removed from the export functionality.

Revit 2020 to AS2020 – 1 to 1 Mapping

The **extension exports models using only the 1 to 1 Mapping Transfer**. This is used most frequently to map sections from Revit to AS, creating various table entries.

Revit 2020 to AS2020 – Sync Options

The **extension** has a **Synchronising feature via the Transfer**. This can be used to transfer and bring back into the Revit or Advance Steel changes between the models.

Revit 2020 – Connection Propagation- Slide 1

Steel Connections Propagation

- New option in the contextual menu
- Available for any steel connections available out-of-the-box
- Same framing conditions required
- Relevant to visible steel members

Quickly place the same steel connections in your project

Revit 2020 - Connection Propagation

Revit 2020 Connections Grouping – Slide 1

Steel Connections Grouping

- New type editor with preview
- Easily configure different types of connections
- Update all instances of the same type from one place
- Reuse them in same or other project -Transfer properties

Manage repeat connection design more easily and efficiently

Revit 2020 –working with new Connection options

Revit 2020 – Tags and Dimensions - 1

New Features for Tags and Dimensions of Steel Elements

- Radial & diameter dimensions of circular openings
- Dimension for holes and shear studs
- Now allow weld tags in any view

Create more accurate documentation for detailed steel elements

Revit 2020 – Tags and Dimensions - 2

Revit 2020 – Detailing options for labeling/tags

Additional Parameters for Steel Components

- More parameters at hand
 - e.g. plate width & length
- Capture more information from the BIM model
- Enhanced collaboration with fabricators
 - More detailed tags
 - Schedules with more information

Create more accurate documentation for components of steel connections

Revit 2020 – Dynamo engine.

Dynamo 2.1 Ships with 2020

- Every time you update Revit
Dynamo will update as well
- Does not impact other
Dynamo installations

Streamline Dynamo installation coordination for your team

Revit 2020- Use of Dynamo Steel Connections

Steel Connections for Dynamo

- New Dynamo nodes to model steel connections
- Out-of-the box scripts ready to be run in Dynamo Player

Enhanced productivity by automating modeling of steel connections

Revit 2020 Steel Connections from Dynamo Scripts

Revit 2020 – Performance upgrades

Enhanced Performance for Detailed Steel Models

- Background process for steel connections
- Faster response time
- Allow to perform other actions at the same time
- Involved elements highlighted in color
- Status visible in background processes window

Get a faster response time for performance intensive steel engineering tasks

Combining it all together
