

# Generative Design in Fusion 360: 2022 and Beyond

IM501943

Mike Smell  
Sr. Product Manager, Fusion 360

# Safe Harbor Statement

We may make forward-looking statements regarding planned or future development efforts for our existing or new products and services and statements regarding our strategic priorities. These statements are not intended to be a promise or guarantee of business results, future availability of products, services or features but merely reflect our current plans and are based on factors currently known to us. These planned and future development efforts may change without notice. Purchasing and investment decisions should not be made based upon reliance on these statements.

A discussion of factors that may affect future results is contained in our most recent Form 10-K and Form 10-Q filings available at [www.sec.gov](http://www.sec.gov), including descriptions of the risk factors that may impact us and the forward-looking statements made in these presentations. Autodesk assumes no obligation to update these forward-looking statements to reflect events that occur or circumstances that exist or change after the date on which they were made. If this presentation is reviewed after the date the statements are made, these statements may no longer contain current or accurate information.

This presentation also contains information, opinions and data supplied by third parties and Autodesk assumes no responsibility for the accuracy or completeness of such information, opinions or data, and shall not be liable for any decisions made based upon reliance on any such information, opinions or data.

Autodesk's partners frequently compete against each other in the marketplace, and it is critically important that all participants in this meeting observe all requirements of antitrust laws and other laws regarding unfair competition. Autodesk's long insistence upon full compliance with all legal requirements in the antitrust field has not been based solely on the desire to stay within the bounds of the law, but also on the conviction that the preservation of a free and vigorous competitive economy is essential to the welfare of our business and that of our partners, the markets they serve, and the countries in which they operate. It is against the policy of Autodesk to sponsor, encourage or tolerate any discussion or communication among any of its partners concerning past, present or future prices, pricing policies, bids, discounts, promotions, terms or conditions of sale, choice of customers, territorial markets, quotas, inventory, allocation of markets, products or services, boycotts and refusals to deal, or any proprietary or confidential information. Communication of this type should not occur, whether written, oral, formal, informal, or "off the record." All discussion at this meeting should be strictly limited to presentation topics.

PLEASE NOTE: AU content is proprietary. Do Not Copy, Post or Distribute without expressed permission.

# Agenda

## Generative Design in Fusion 360

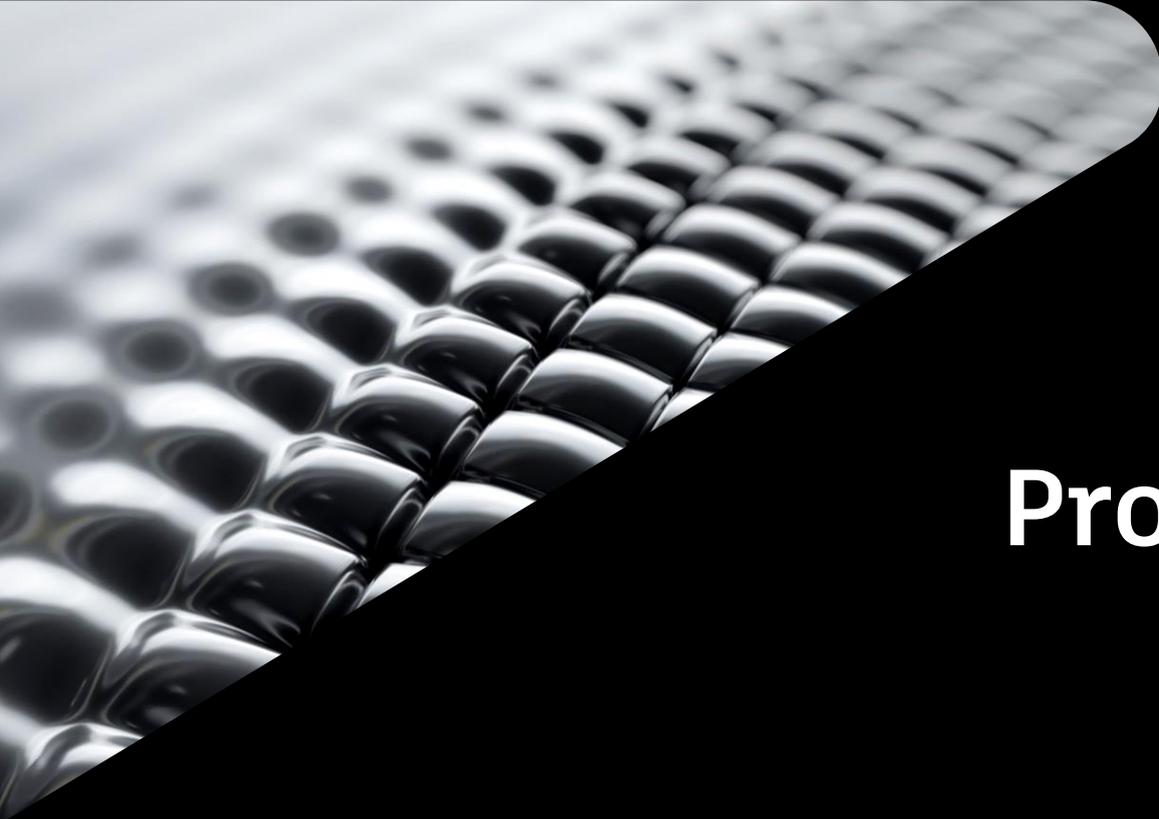

Development Progress in  
2022

Customer Spotlight

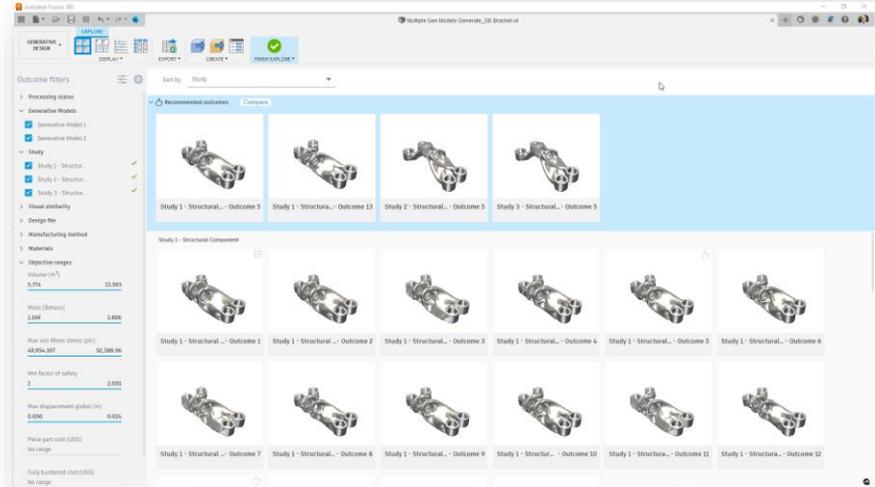

Over the Horizon

# Development Progress in 2022

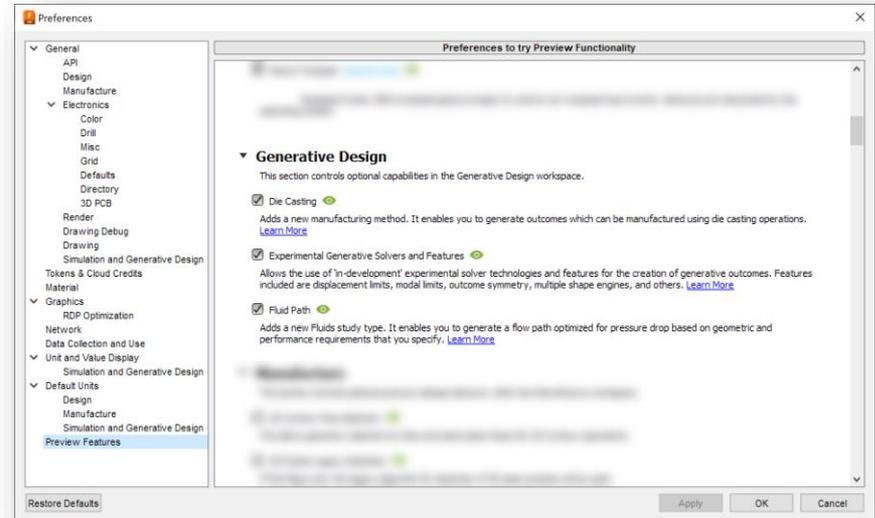

# Multi-Export of Generative Design Outcomes

- March 2022
- Enables users to create up to 4 editable designs in a single job submission
- Speeds up comparing designs in context and the path to downstream workflows like editing, simulation and manufacturing

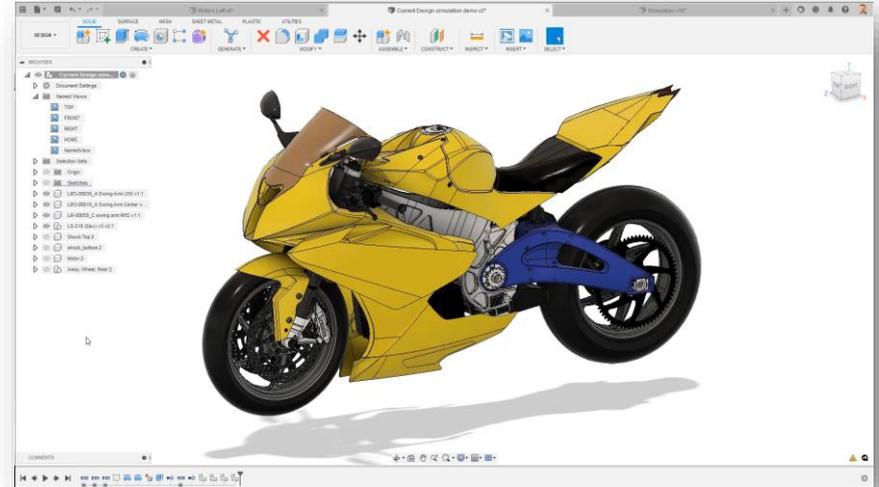

# Experimental Solver Performance

- March 2022 and May 2022
- Brings more modern solver technology and performance to existing functionality – *up to 2x faster*
- Added an additional outcome to basic setups to validate technology with production workloads

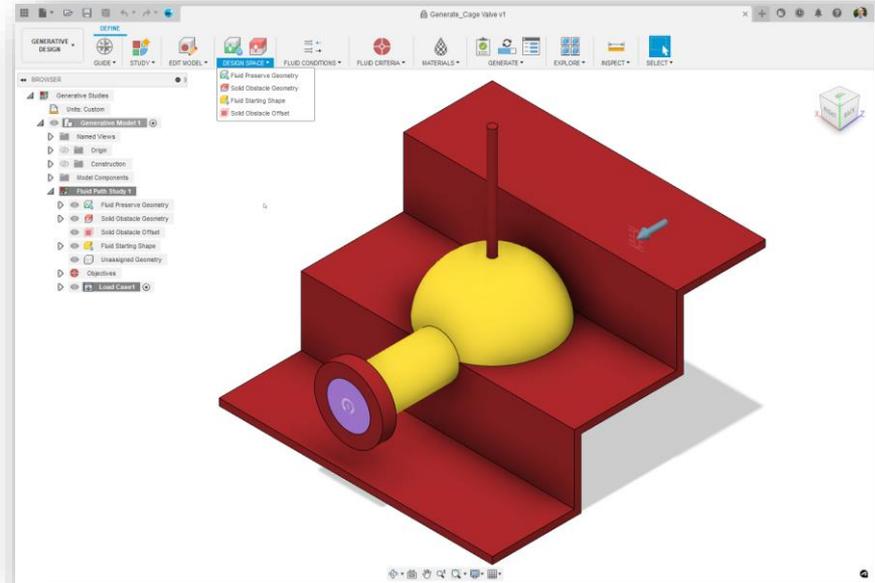

# Simulation Contact Forces

- May 2022
- Reaction force and moment data can now be extracted from contact pairs in Linear Static Stress simulations
- Can be useful in gathering force data from assemblies to support more accurate generative design setups

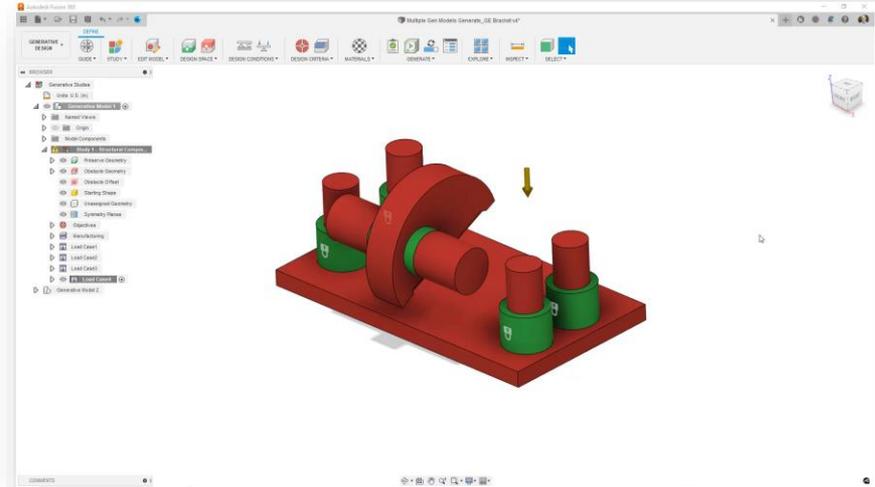

# Fluid Path Study Terminology Update

- July 2022
- Improved clarity on the design space definitions for the interaction between fluids and solids
- Additional coloring on boundary condition faces to differentiate flow sources from flow openings or fluid pressures

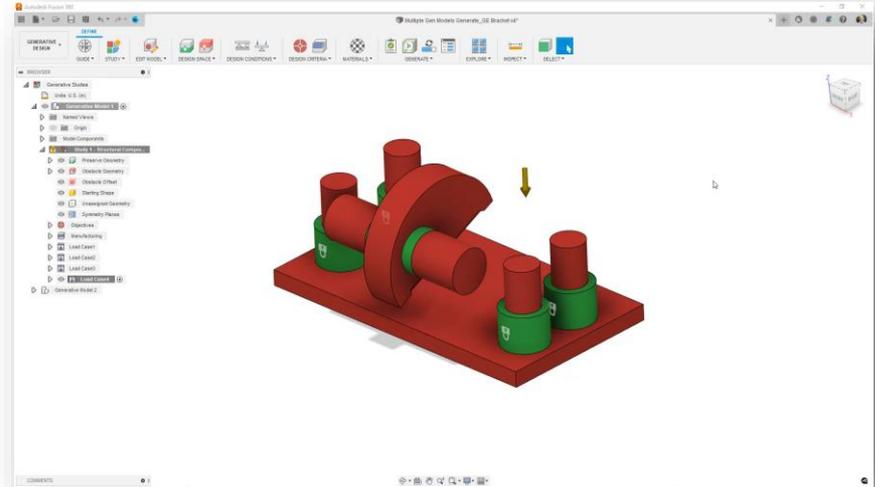

# Generative Model Filter in Explore

- July 2022
- Generative Models make it easy to expand the exploration space
- Filters in Explore make it easier to zero in on the best outcomes and understand result came from what setup

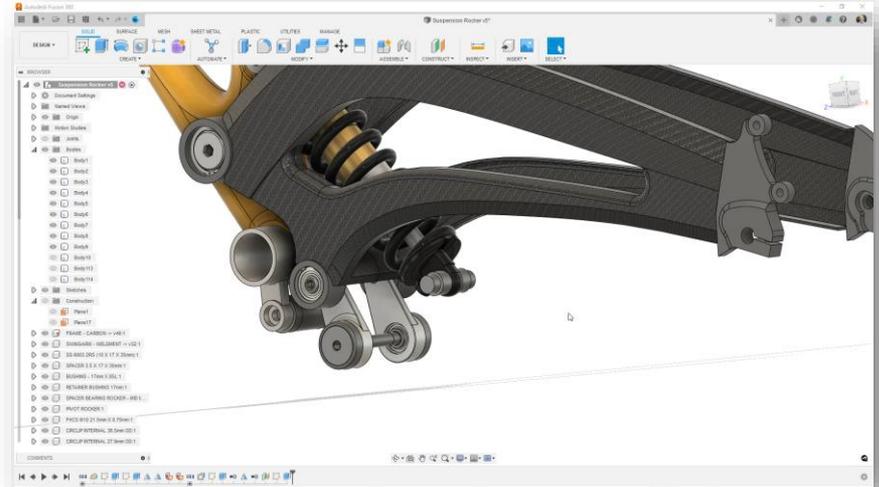

# Real-Time Study Name Syncing in Explore

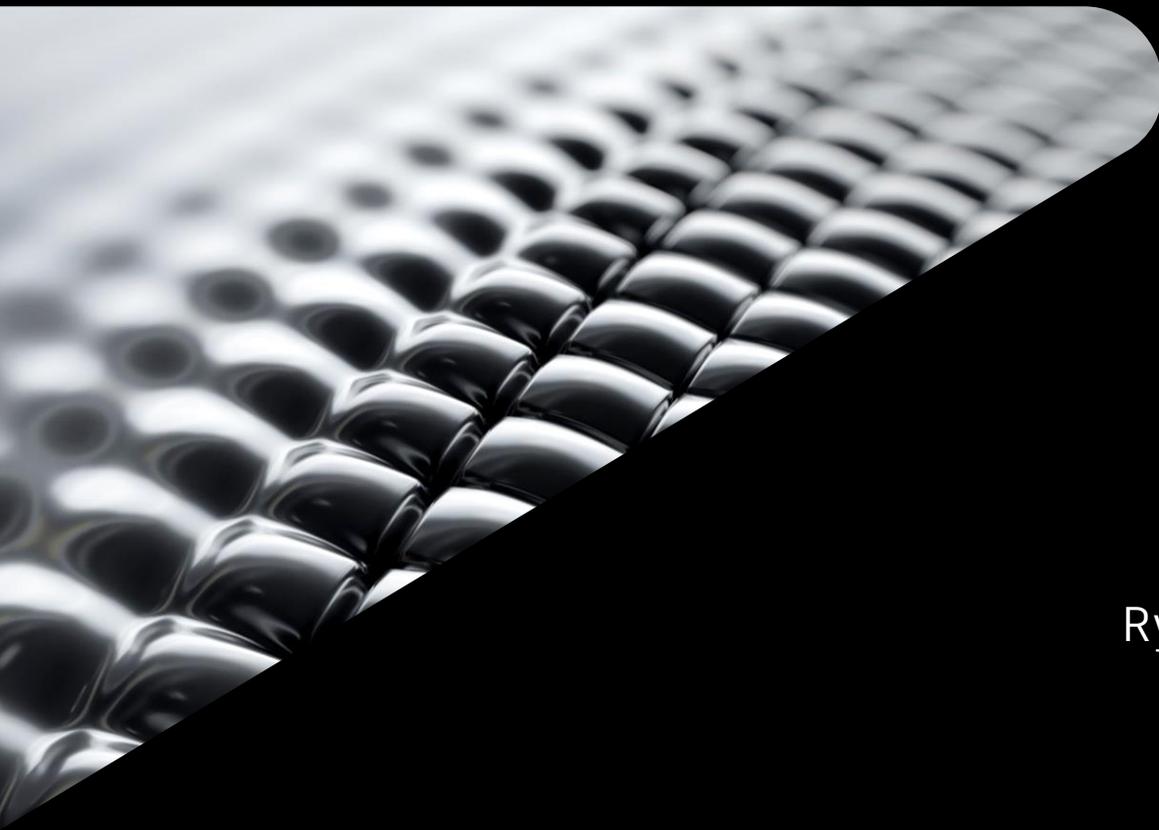

- July 2022
- Multiple studies allow additional exploration through varied study configurations
- Keeping study names in sync between setup and results improves the ability to understand what result came from what setup

# Automated Modeling as Public Preview

- July 2022
- New tool in the Design Workspace
- Automates exploring and creating new design concepts based on simple definitions of what to connect and what to avoid
- Great for the early stages of the design process

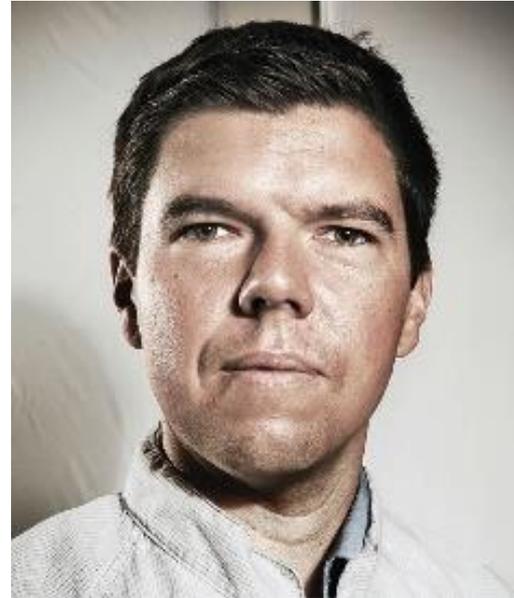

# Customer Spotlight

Ryan McClelland, NASA Goddard

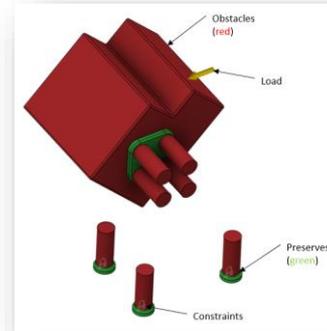

# Generative Design at NASA Goddard

- Ryan McClelland is a Research Engineer in NASA GSFC's Instrument Systems and Technology Division (ISTD) focused on developing and applying Digital Engineering technologies
- Goal: Create and infuse a process to rapidly develop lightweight spaceflight structures using commercial software tools
- Progress: Used Fusion 360 Generative Design to develop 20+ parts

# Why Generative Design

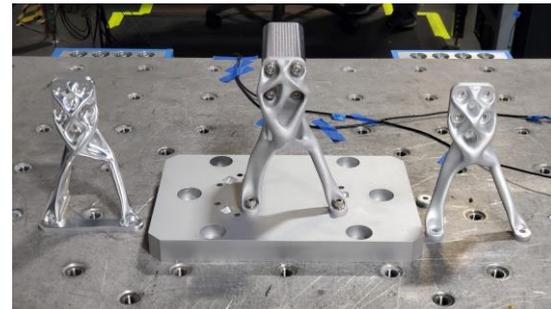

- Current development methods are too costly and time consuming to optimize designs for performance while considering alternative manufacturing processes and materials
- Generative Design automates the design exploration of manufacturing process and materials while optimizing design performance for a given set of requirements

Encode Requirements  
~1 hr

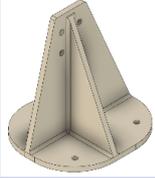

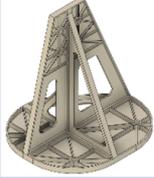

Evolve Designs  
~1 hr

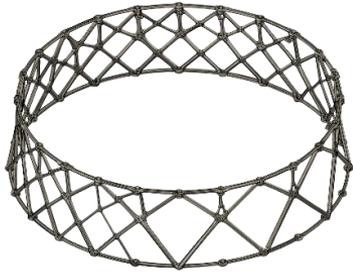

Fabricate Parts  
1 day – 3 weeks

# Case Study

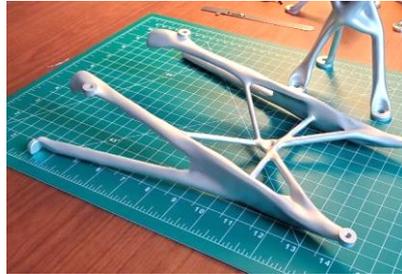

Human Design Exploration ~2 days					Design/analysis/DfM ~2hrs	
Designer / Iteration	Drew/Ryan 1	Drew/Ryan 2	Drew/Ryan 3	Drew/Ryan 4	Generative 31 CNC	Generative 31 AM
Design (Aluminum)						
Mass (kg)	0.59	0.18	0.27	0.18	0.2	0.2
1 <sup>st</sup> Mode (Hz)	137	37	65	108	147	177
Stiffness/mass (Hz/kg)	232	205	240	600	735 ~3x better	885 ~3.5x better
Max Stress (MPa)	26.3	189	103	60.7	14.8 >4x better	11.2 >5x better
Manufacturing	CNC	CNC Difficult to machine hog-outs	CNC Difficult to machine hog-outs	Not machinable/ printable	\$1000 3 days	\$2000 3 weeks
					 	

Results verified by test →

# Additional Example Applications

DraMS: Carousel base

EXCITE: Radiator mount

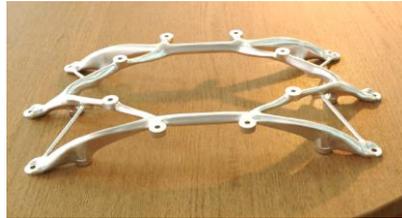

MSR-CCRS: Diode Mount

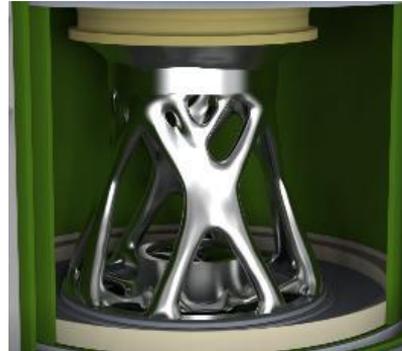

NGXO: Mirror mount

RST: OBA node

STAR-X Detector bench

ALTIRS: Mirror mount

HERMES: MAG Stanchion

# Results

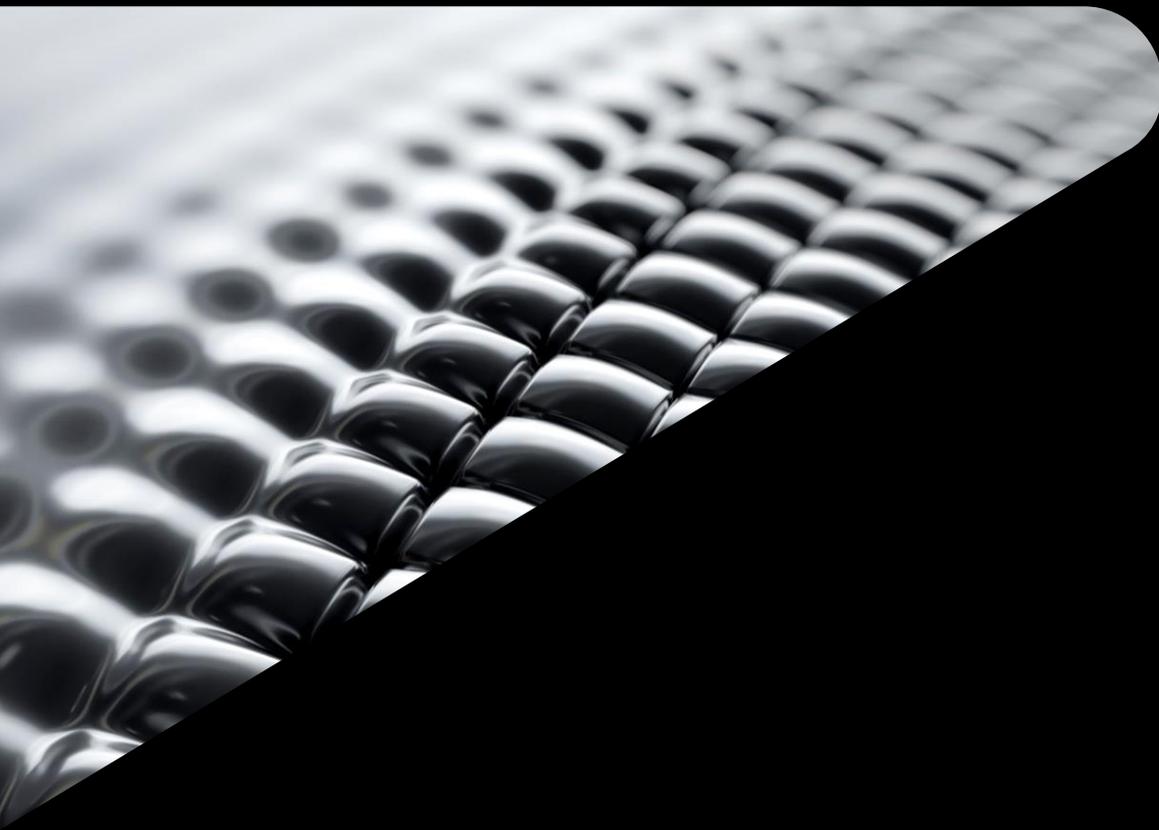

- Generative Design has automated the design process for metallic structural components
  - Can get from requirements to parts ready for fabrication in ~1-2 days
  - Parts can be developed for CNC machining or additive manufacturing
  - Parts are typically ~3x stiffer/lighter/stronger than human designs, as validated through physical testing

5 axis machined

Additive metal

# Over the Horizon

Generative Design Technology

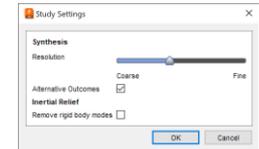

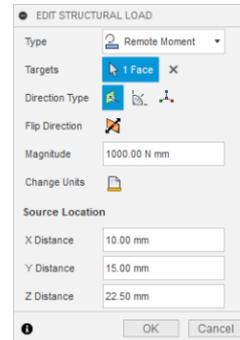

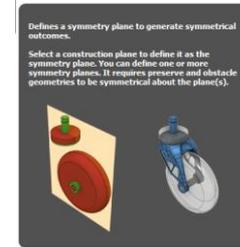

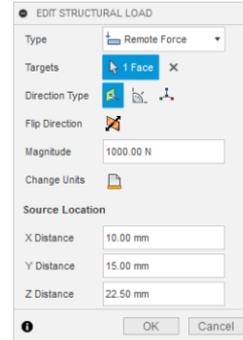

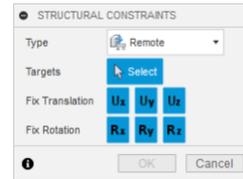

# Generative Design

Structural Component Study

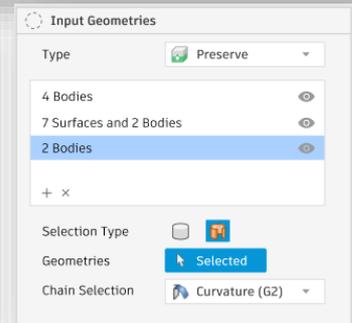

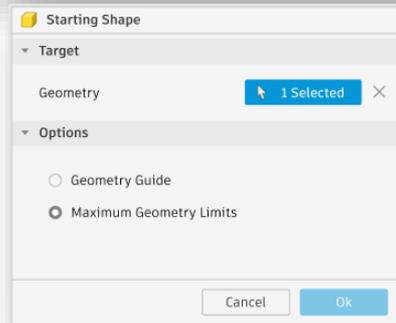

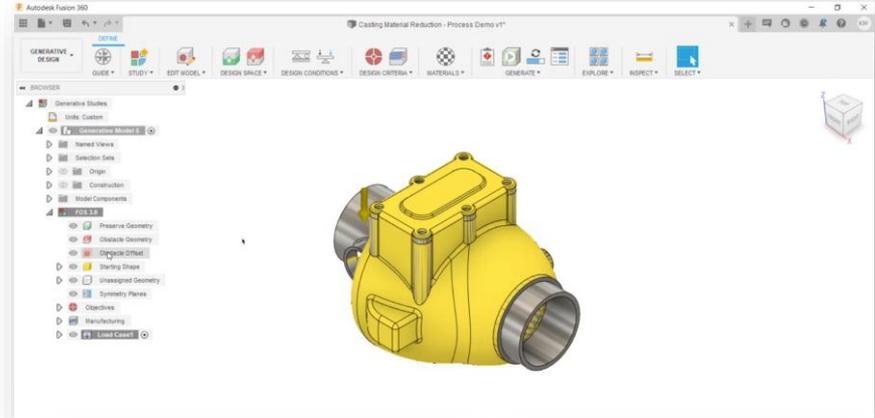

# Commercializing Experimental Solvers

- Phase 1 – Bring modern solver technology and performance to existing functionality
- Phase 2 – Remote forces, moments and constraints, symmetry, displacement constraints
- Phase 3 – Modal frequency constraints, rigid body mode support (inertial relief) and buckling constraints

# Light-weighting of Existing Designs

- Streamline the setup workflow when working with existing designs
- Reduce requirements around modeling preserves and obstacles to capture existing design intent
- Quicker time to results

# Casting Manufacturing Constraint

- Improve the quality and flexibility of the current Die Casting preview
- Expand to support sand casting design requirements
- Path to using Generative Design in high production volume applications

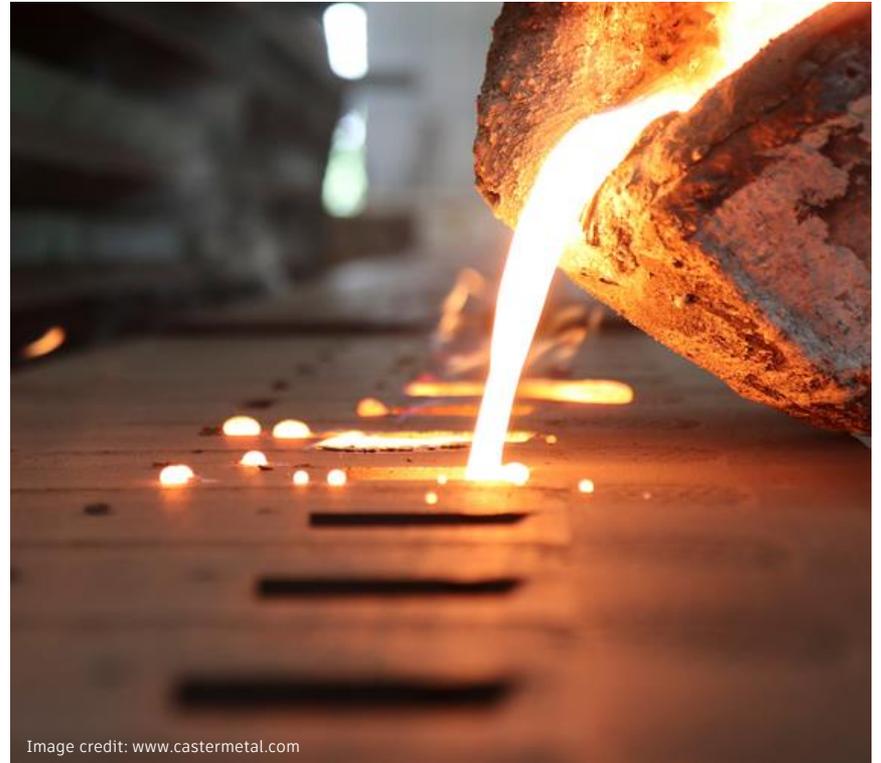

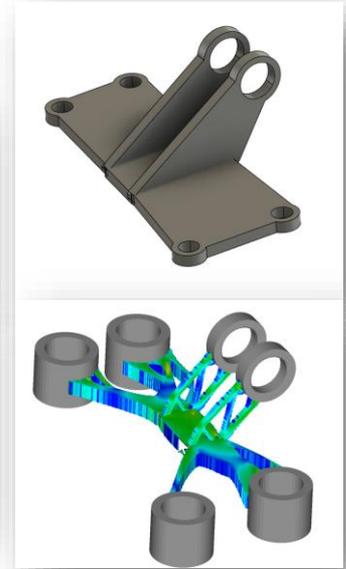

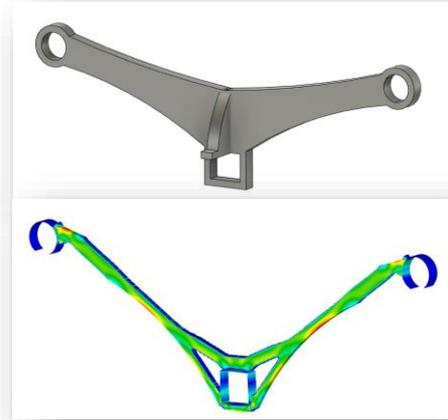

Image credit: [www.castermetal.com](http://www.castermetal.com)

# Weldment MFG Method and Light-weighting

- Path to using Generative Design for more common manufacturing processes and higher production volume applications
- Optimize for material thickness and profiles

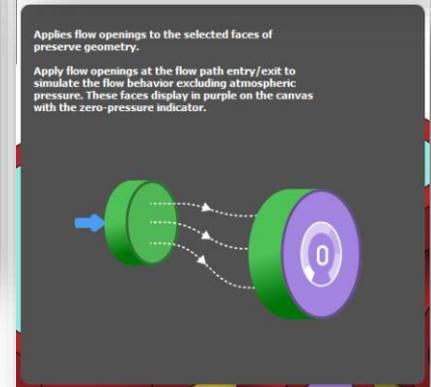

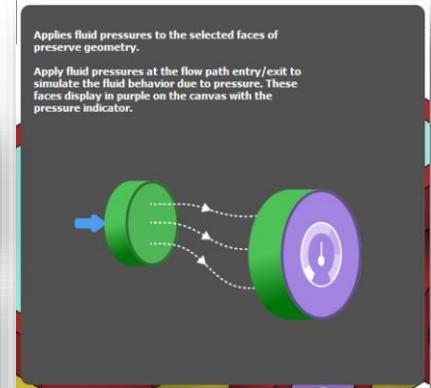

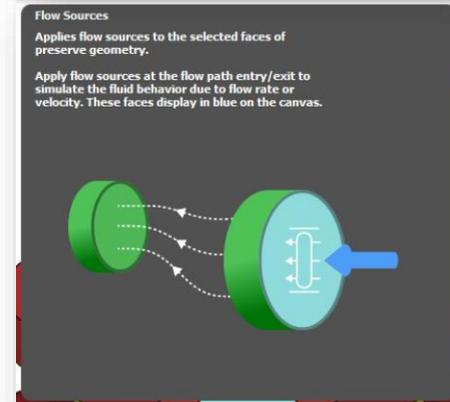

# Generative Design

Fluid Path Study

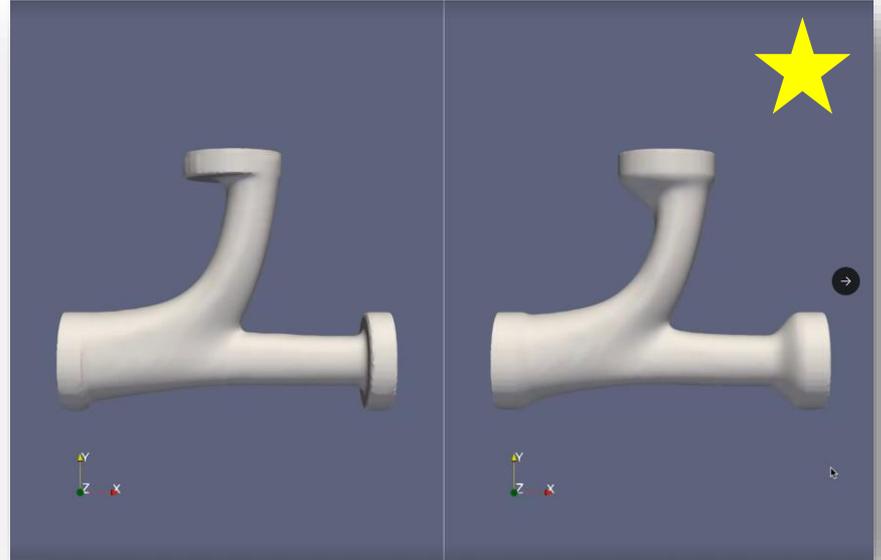

# Fluid Path Boundary Condition Refinement

- Improved naming and command isolation to align with user intent
- Simple combination of input requirements to ensure proper setup
  - Flow Source(s) + Flow Opening(s)
  - Flow Source(s) + Fluid Pressure(s)
  - Flow Source(s) + Flow Opening(s) + Fluid Pressure(s)

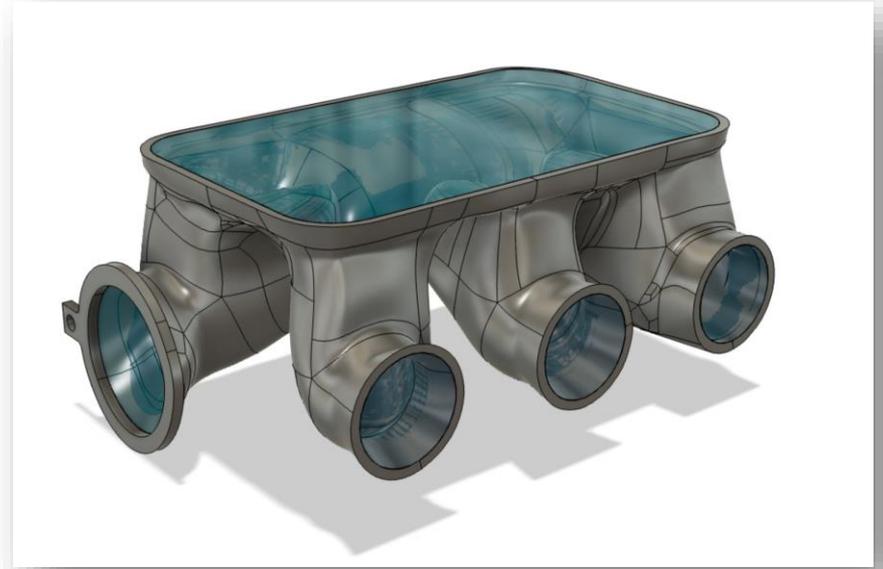

# Improved Fluid Path to Preserve Transitions

- Improved geometry transitions at the interfaces between preserve fluid preserve geometry and generated shape
- Reduces required design editing and anomalies in downstream validation

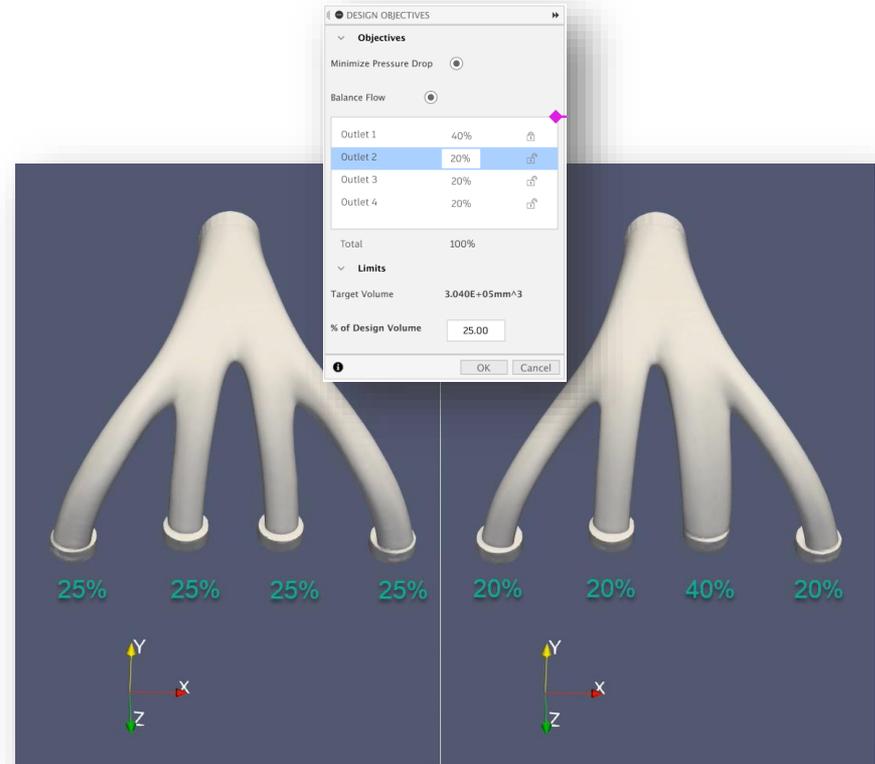

# Solid Wrapper Geometry for Fluid Path Outcome

- Automatically generates an editable solid body with an approximate user defined thickness that contacts the wetted surface of the generated fluid outcome
- Sets up a downstream workflow to Generative Design for Structural Components to optimize the solid design for expected fluid loads

# Flow Opening Biasing in Fluid Path Study

- Allows for user defined distribution of flow across defined Flow Openings while minimizing pressure drop in the system

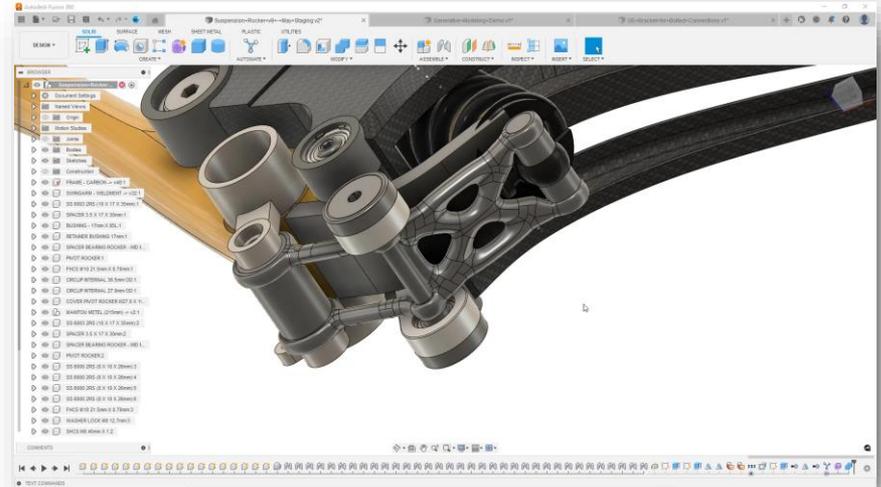

# Automated Modeling

Design Workspace

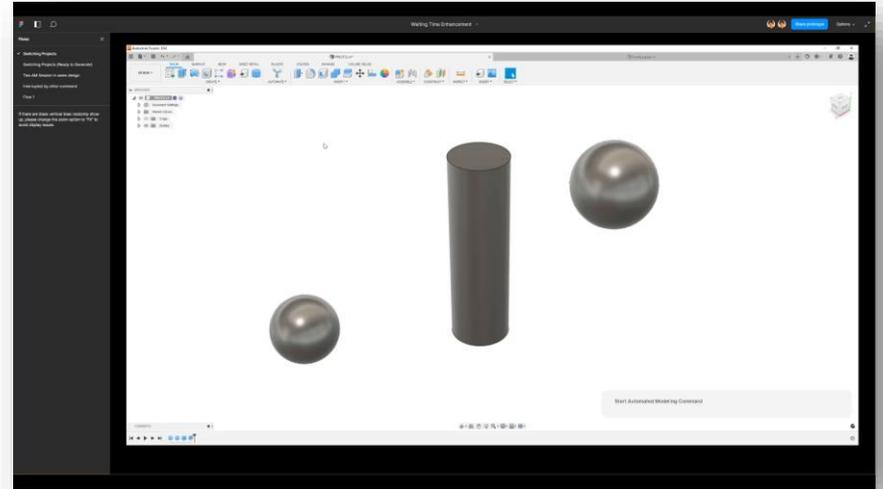

# Thickness/Volume Control Slider

- Provides variation in the resulting alternatives
- Increases the number of potential design solutions
- Easily create thicker or thinner designs
- Reduces the potential amount of downstream editing required to get a desired shape

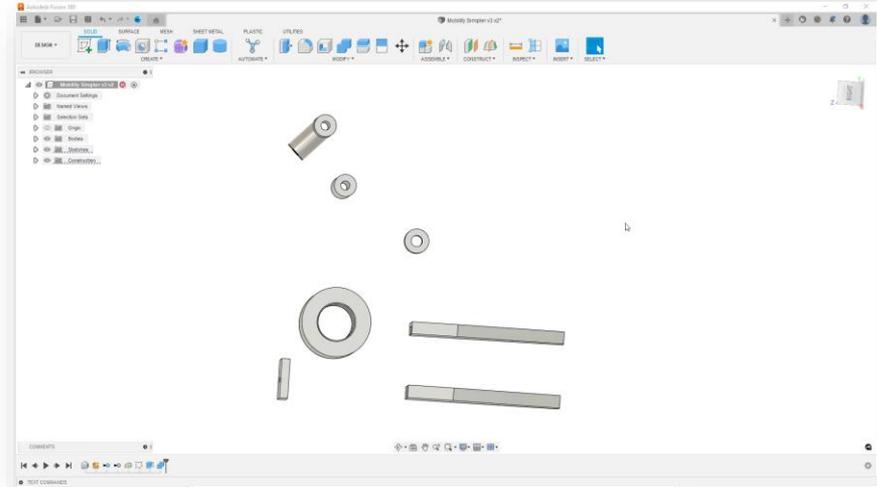

# Context Switching Support

- Prevents unintended cancelling of alternative generation
- Allows multi-tasking while Automated Modeling is running
- Clear indicator that Automated Modeling features need to be completed before additional downstream modeling

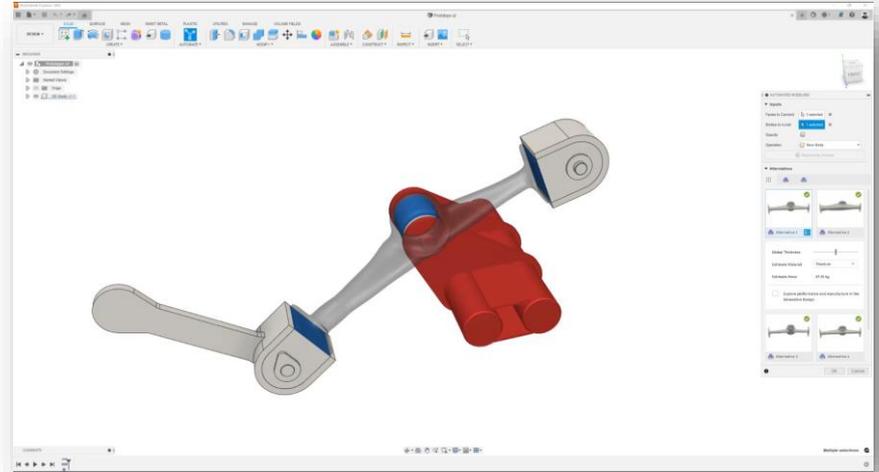

# Plate-style Alternatives

- Provides a totally different, simpler style of design alternative
- Simplified editability with sketch and extrude based construction
- Path to simpler manufacturing processes

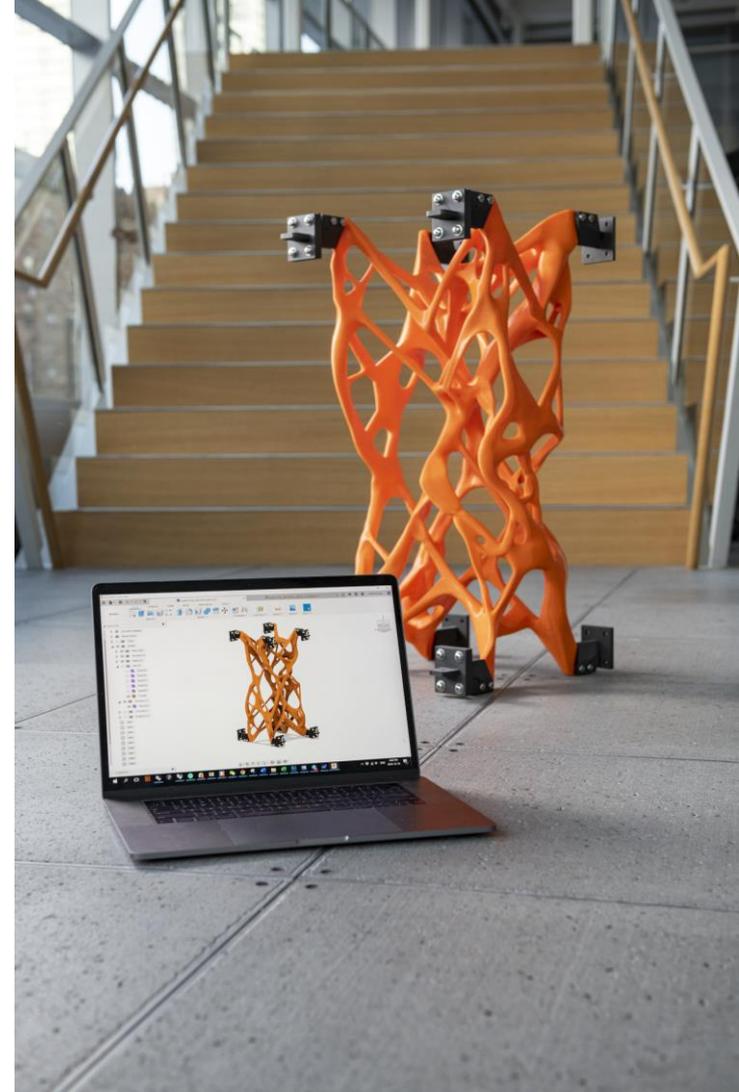

# Push to Generative Design

- On-ramp to objective-based design exploration
- Translation of Automated Modeling setup into Generative Design setup
- Create refined alternatives informed by performance, materials, manufacturing and production volume requirements
