

Solving Your Manufacturing Business Challenges with Autodesk Fusion 360

MFG502655

Rob Walker
Manager, Technical Marketing

Safe Harbor Statement

We may make forward-looking statements regarding planned or future development efforts for our existing or new products and services and statements regarding our strategic priorities. These statements are not intended to be a promise or guarantee of business results, future availability of products, services or features but merely reflect our current plans and are based on factors currently known to us. These planned and future development efforts may change without notice. Purchasing and investment decisions should not be made based upon reliance on these statements.

A discussion of factors that may affect future results is contained in our most recent Form 10-K and Form 10-Q filings available at www.sec.gov, including descriptions of the risk factors that may impact us and the forward-looking statements made in these presentations. Autodesk assumes no obligation to update these forward-looking statements to reflect events that occur or circumstances that exist or change after the date on which they were made. If this presentation is reviewed after the date the statements are made, these statements may no longer contain current or accurate information.

This presentation also contains information, opinions and data supplied by third parties and Autodesk assumes no responsibility for the accuracy or completeness of such information, opinions or data, and shall not be liable for any decisions made based upon reliance on any such information, opinions or data.

Autodesk's partners frequently compete against each other in the marketplace, and it is critically important that all participants in this meeting observe all requirements of antitrust laws and other laws regarding unfair competition. Autodesk's long insistence upon full compliance with all legal requirements in the antitrust field has not been based solely on the desire to stay within the bounds of the law, but also on the conviction that the preservation of a free and vigorous competitive economy is essential to the welfare of our business and that of our partners, the markets they serve, and the countries in which they operate. It is against the policy of Autodesk to sponsor, encourage or tolerate any discussion or communication among any of its partners concerning past, present or future prices, pricing policies, bids, discounts, promotions, terms or conditions of sale, choice of customers, territorial markets, quotas, inventory, allocation of markets, products or services, boycotts and refusals to deal, or any proprietary or confidential information. Communication of this type should not occur, whether written, oral, formal, informal, or "off the record." All discussion at this meeting should be strictly limited to presentation topics.

PLEASE NOTE: AU content is proprietary. Do Not Copy, Post or Distribute without expressed permission.

About the speaker

Rob Walker

Rob is the Manager of the Manufacturing Technical Marketing team at Autodesk, whose role is to help customers understand how they can achieve their manufacturing goals, using the advanced manufacturing solutions that Autodesk offers.

Rob graduated from the University of Liverpool with a Bachelor's degree in Aerospace Engineering and a Masters in Product Design and Management, before embarking on a career with Delcam as an Applications Engineer. Initially starting in the UK department, he trained and supported UK customers, before moving into an international role, where he assisted the global network of subsidiaries and resellers in both pre- and post-sales activities. Following the acquisition of Delcam by Autodesk in 2014, he moved to Technical Marketing, and is now in his 18th year of service.

Agenda

- 1 Introduction
- 2 Manufacturing department scenario
- 3 Business outcomes and challenges
- 4 Why Fusion 360?
- 5 Using Fusion 360 in manufacturing departments
- 6 Summary

Introduction

Introduction

- Using Fusion 360 in Manufacturing Departments
- Learn how...
 - Using automation can reduce programming times to start machining sooner
 - The programming of expensive 5-axis CNC machines can be simplified
 - Using in-cycle inspection can improve part setup and avoid the need for costly re-work
 - Improving your use of data to help design and manufacturing teams to collaborate more effectively

A close-up, black and white photograph of a woven mesh or fabric texture, showing a grid of small, rounded, interlocking shapes. The texture is diagonal and fills the left side of the image, partially obscured by a black diagonal shape.

Manufacturing department scenario

Key

- Offices
- Packaging
- Goods In/Out
- Assembly & QA
- Manufacturing

Manufacturing department definition

- Growing manufacturing organizations naturally establish separate departments
- Each department has a focus, e.g.:
 - Design
 - Production
 - Quality Control
 - Finance etc.
- Choosing the right manufacturing software can empower your team
- Unlock the full potential of your manufacturing department

A close-up photograph of a black, glossy, textured surface with a grid-like pattern of raised squares, possibly a metal mesh or a specialized material. The surface is angled diagonally across the frame, with a soft light source creating highlights and shadows that emphasize the three-dimensional texture.

Business outcomes and challenges

INDUSTRY TRENDS

A close-up shot of a black robotic gripper holding a small green LEGO brick with three white circles on it. The background is a warm, orange-brown color.

CREATE
BETTER
PRODUCTS

A blurred, high-angle shot of a large crowd of people in business attire, suggesting a busy trade show or conference.

WIN
MORE
BUSINESS

A wide-angle shot of a large industrial facility, possibly a food processing plant, featuring a prominent curved conveyor belt system.

IMPROVE
OPERATIONAL
EFFICIENCY

A top-down view of several technicians wearing red gloves working on the chassis of a car, likely in a manufacturing or assembly setting.

ENABLE
INCREASED
INNOVATION

Business outcomes

- Improve collaboration
- Improve time to market
- Improve manufacturing throughput
- Reduce defects and non-conformities
- Reduce non-value added processes

Challenges

Design Changes

Need to Automate

Maximizing CNC Usage

Improve Quality

Fill Skills Gap

Design changes

- Design changes can be costly
 - Cost of not communicating changes?
- Software can help
 - Providing a direct link between design and manufacturing
 - Enabling effective communication between departments
- Improve collaboration

Need to automate

- What do we mean by “Automated”?
 - Many types of automation in manufacturing
- Focus on automation within design and manufacturing software
- Delivers repeatability and consistency
 - Improves quality and reliability
- Improve time to market

Maximizing CNC usage

- Important to maximize CNC usage to maximize return on investment
- Many ways to achieve this
 - Automated setup process
 - Full use of multi-axis machines
 - In-cycle probing for verification
- Software to produce safe, predictable NC code for your CNC machines
- Improve manufacturing throughput

Improve quality

- Linked to automation and CNC machine utilization
- Quality can affect profitability
 - Need for costly rework
 - Affect reputation
- Software can help improve quality
 - Better toolpath strategies
 - Multi-axis machining
 - Automated setup and verification
- Reduce defects and non-conformities

Fill skills gap

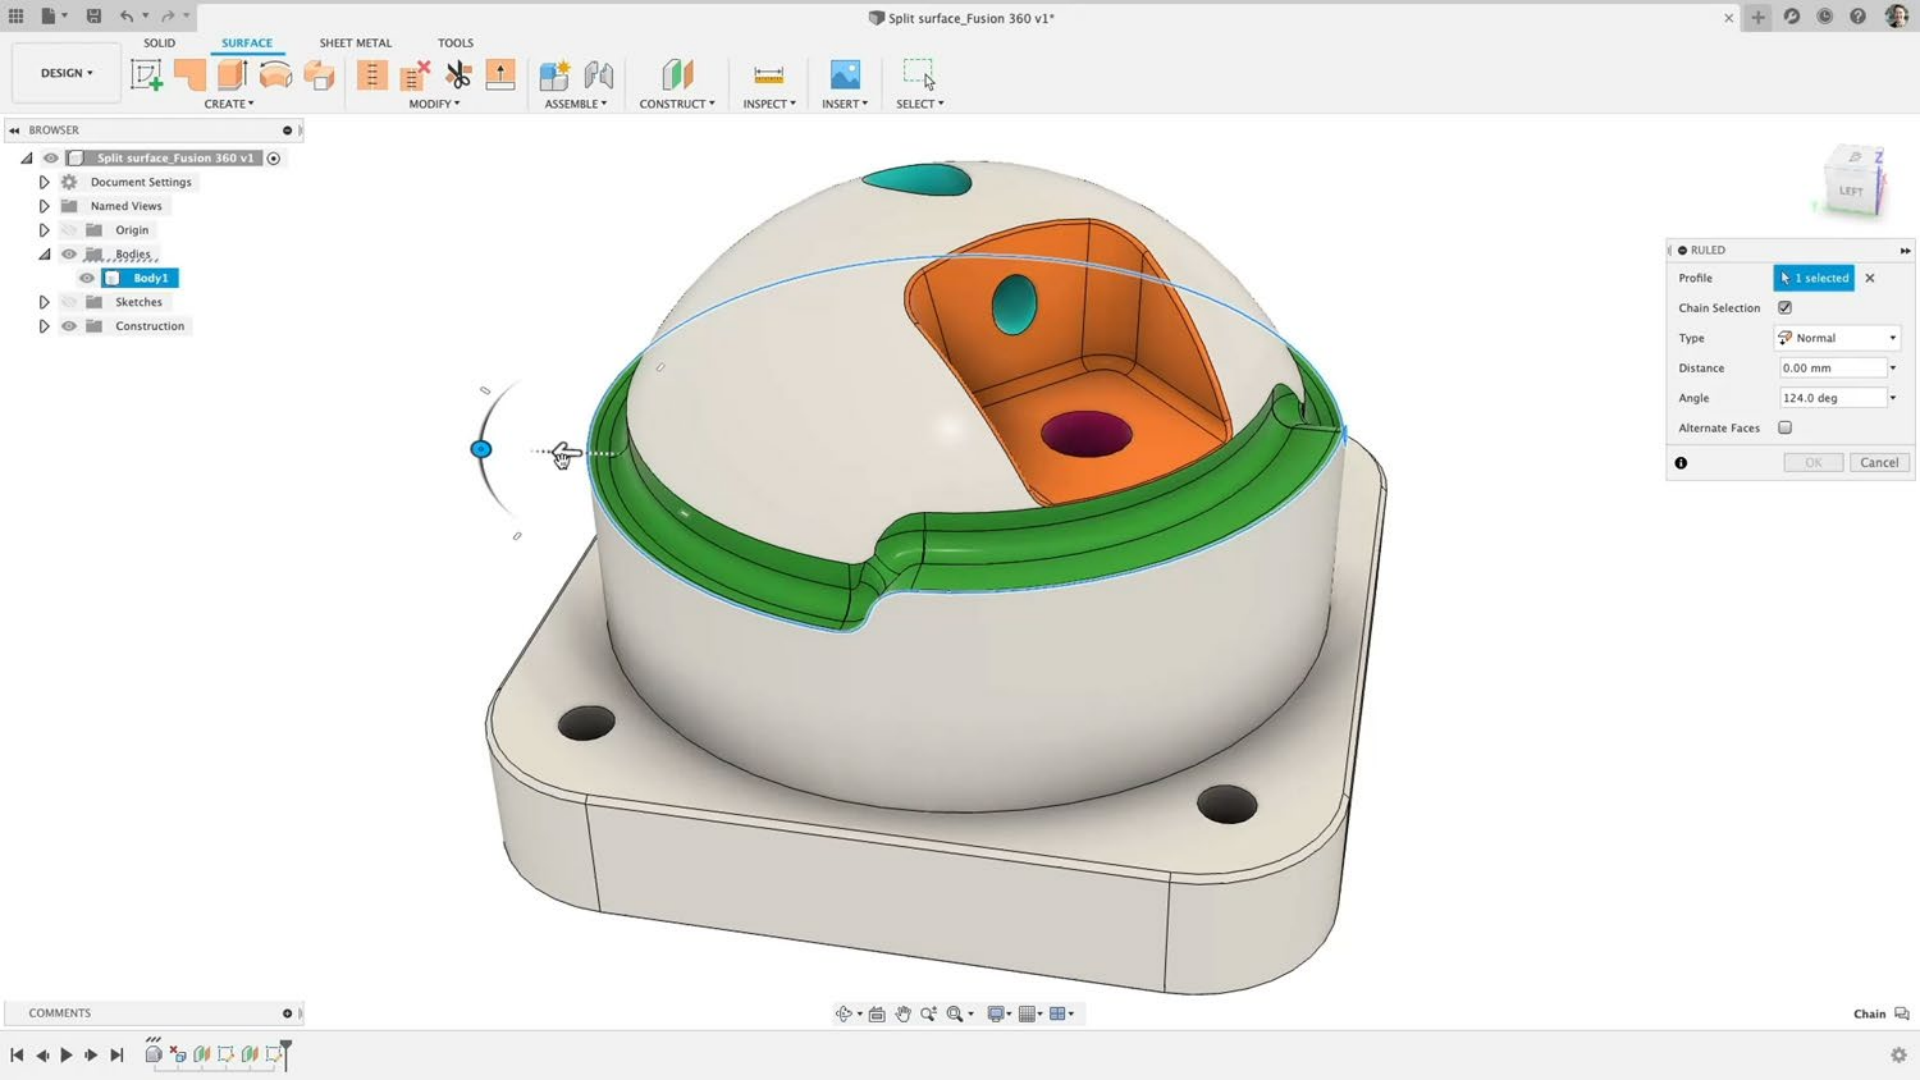

- Gap between skilled jobs and the skilled workforce available
- Skilled but aging workforce
 - Capturing knowledge is vital
- Use software which can capture this knowledge
 - Train others to follow the best practices
 - Refine over time
- Improve collaboration

Why Fusion 360?

Integrated

Collaborative

Accessible

A close-up, black and white photograph of a textured surface, possibly a metal mesh or a 3D-printed lattice. The texture consists of a grid of raised, rounded squares or cubes, creating a series of shadows and highlights that emphasize the three-dimensional nature of the pattern. The image is partially obscured by a black diagonal shape that serves as a background for the text.

A close-up, black and white photograph of a CNC-machined metal surface. The surface features a repeating pattern of rounded rectangular protrusions, creating a textured, grid-like appearance. The lighting highlights the metallic sheen and the precision of the machining.

Multi-axis CNC machining

Multi-axis CNC machining

- Complex, high-value parts often contain features and details which cannot be produced using 3-Axis
- Need to create multi-axis operations to fully utilize machine tools

Automated setup and in- cycle process control

Automated setup and in-cycle process control

- Manual location is time-consuming and difficult to perform accurately
 - Machine is under-utilized with accuracy issues when repositioning
- Utilize spindle-mounted probe to perform automated setup and part verification

Hi Rob,

Yes we have that fixture, how many do you need?

Klaus.
