

Let's Get It Started!

An in-depth kick-off to the FEA with Nastran Power Track

Sualp Ozel, PE
Product Manager

Safe Harbor

- We may make statements regarding planned or future development efforts for our existing or new products and services. These statements are not intended to be a promise or guarantee of future availability of products, services or features but merely reflect our current plans and based on factors currently known to us. These planned and future development efforts may change without notice. Purchasing decisions should not be made based upon reliance on these statements.
- These statements are being made as of Tuesday December 1, 2015 and we assume no obligation to update these forward-looking statements to reflect events that occur or circumstances that exist or change after the date on which they were made. If this presentation is reviewed after Tuesday December 1, 2015, these statements may no longer contain current or accurate information.

FEA with Autodesk Nastran Track Schedule

	1 Tuesday	2 Wednesday	3 Thursday
8:00	Class 1: Let's Get It Started! An in-depth kick-off to the FEA with Autodesk Nastran Power Track - Sualp Ozel	Class 5: The World is Nonlinear! Seeing and capturing nonlinear in real-world problems - Vince Adams & Dave Weinberg	Class 8: If your products make an impact, let me introduce you to Explicit Dynamics - Lee Taylor
9:00			
10:00	Opening Session Keynote	Beyond Linear and Static: What all the other buttons in In-CAD are used for - Bart McPheeters	Class 9: Shaking All Over - Using simulation to understand vibrating products - Allen Fowkes
11:00			
12:00			
1:00	Class 2: All meshes aren't alike! Tips and tricks for getting the best mesh - Mitch Muncy	A Job Weld Done: Getting to the bottom of modeling welds in FEA... - Vince Adams	Innovation Forum
2:00			
3:00	Class 3: Prep School: Prepare Those Crazy Juvenile CAD Models for the Real World of Simulation - Tyler Henderson	Innovation Forum	Class 10: What do my answers mean? All about results in FEA- Jim Byrne
4:00			
5:00	Class 4: Simulate what you test: Modeling assemblies for more realistic digital prototypes - Andrew Sartorelli	Class 6: Goal Driven Design - Using Simulation and Optimization in the Design Process - Mike Smell	Closing Keynote
		Class 7: How do the experts see Simulation in the Future of Making Things? - Expert Panel - Angie Schrader, facilitator	

Faculty Includes:

Sualp Ozel	Simulation Product Manager
Mitch Muncy	Nastran Product Manager
Tyler Henderson	User Experience Designer
Andrew Sartorelli	Technical Specialist
Vince Adams	Product Specialist
Dave Weinberg	Software Architect
Bart McPheeters	Technical Specialist
Mike Smell	Simulation Product Manager
Lee Taylor	Distinguished Research Engineer
Allen Fowkes	Technical Specialist
Jim Byrne	Technical Marketing Specialist
Andrew Sears	Sr. Software Quality Engineer

- AU General Session
- Track Course
- Extra-track Opportunity

Class summary

This class will cover the basics of finite element analysis (FEA) and explore examples in order to gain additional insight and improve product design for oil and gas, and industrial machinery.

Key learning objectives

At the end of this class, you will be able to:

- Understand the basics of finite element analysis
- Learn how to generate a finite element mesh
- Learn how to set up a problem
- Learn how to post process results

Agenda

- Session Approach
- Finite Element Analysis (FEA) Overview
- FEA Parameters
- FEA Best Practices
- FEA Software Introduction
- Analysis Walkthrough

Session Approach

This session will not cover theoretical information... there's just not enough time to teach everyone matrix algebra

$$F = -kx$$

$$\Delta L = \frac{F}{EA} L = \frac{\sigma}{E} L.$$

$$G \stackrel{\text{def}}{=} \frac{\tau_{xy}}{\gamma_{xy}} = \frac{F/A}{\Delta x/l} = \frac{Fl}{A\Delta x}$$

$$-\sum_{k=1}^n u_k \phi(v_k, v_j) = \sum_{k=1}^n f_k \int v_k v_j dx \text{ for } j = 1, \dots, n. \quad (4)$$

$$\nu = -\frac{d\varepsilon_{\text{trans}}}{d\varepsilon_{\text{axial}}} = -\frac{d\varepsilon_y}{d\varepsilon_x} = -\frac{d\varepsilon_z}{d\varepsilon_x}$$

$$\begin{bmatrix} \varepsilon_{11} \\ \varepsilon_{22} \\ \varepsilon_{33} \\ 2\varepsilon_{23} \\ 2\varepsilon_{31} \\ 2\varepsilon_{12} \end{bmatrix} = \begin{bmatrix} \varepsilon_{11} \\ \varepsilon_{22} \\ \varepsilon_{33} \\ \gamma_{23} \\ \gamma_{31} \\ \gamma_{12} \end{bmatrix} = \frac{1}{E} \begin{bmatrix} 1 & -\nu & -\nu & 0 & 0 & 0 \\ -\nu & 1 & -\nu & 0 & 0 & 0 \\ -\nu & -\nu & 1 & 0 & 0 & 0 \\ 0 & 0 & 0 & 2(1+\nu) & 0 & 0 \\ 0 & 0 & 0 & 0 & 2(1+\nu) & 0 \\ 0 & 0 & 0 & 0 & 0 & 2(1+\nu) \end{bmatrix} \begin{bmatrix} \sigma_{11} \\ \sigma_{22} \\ \sigma_{33} \\ \sigma_{23} \\ \sigma_{31} \\ \sigma_{12} \end{bmatrix}$$

Session Approach

- We are going to apply and leverage modern technology to gain insights into the use cases and capabilities

FEA Description

Finite Element Analysis (FEA) is a computerized method for predicting how a real-world object will react to forces, vibration, heat, etc. to determine whether or not it will function as planned

FEA Benefits

- Predict Product Performance
- Reduce Raw Materials
- Ensure Optimal Design
- Reduce Manual Testing and Prototypes
- Test What If Scenarios
- Shorten Design Cycle

Who Uses Simulation?

The Engineer

The Analyst

FEA Process Overview

- CAD Model Creation / Simplification
- Simulation Setup
- Solve
- Review Results
- Optimize Design

Analysis Types

- Linear  Focus for this presentation
- Nonlinear
- Thermal / Electrostatic
- Natural Frequency / Modal Analysis
- Vibrations
- Acoustics
- Fatigue Analysis

Linear vs. Nonlinear

Linear

Focus for this presentation

- Structure returns to original form
- Small changes in shape stiffness
- No changes in loading direction or magnitude
- Material properties do not change
- Small deformation and strain

Nonlinear

Wednesday 8:00 AM

- Geometry changes resulting in stiffness change
- Material deformation that may not return to original form
- Supports changes in load direction and constraint locations
- Support of nonlinear load curves

Meshed 3D Model Example

Node Overview

- A node is a coordinate location in space where the Degrees of Freedom (DOFs) are defined.

Element Overview

- An element is a mathematical relation that defines how the DOFs of one node relate to the next.

Types of Elements

- 1D elements
 - A line connecting 2 nodes only for items like beams and springs
- 2D elements
 - Planar or axisymmetric elements with either three or four edges enclosing an area
 - Plates or Shell Elements: Planar elements that are triangular or quadrilateral with a specified thickness
- 3D (solid) elements
 - Enclosed 3D volumes with 4, 5, 6 or 8 corner nodes

Element connectivity

- Elements within a single part body can only communicate to one another via common nodes for transferring data information

No Connection

Connected Nodes

Material Assignment

- Material properties define the structure characteristics of the part
- Material property information can be located at matweb.com

Mild Steel:

Physical

- Density = 0.284 lbmass/in³

Linear Structural

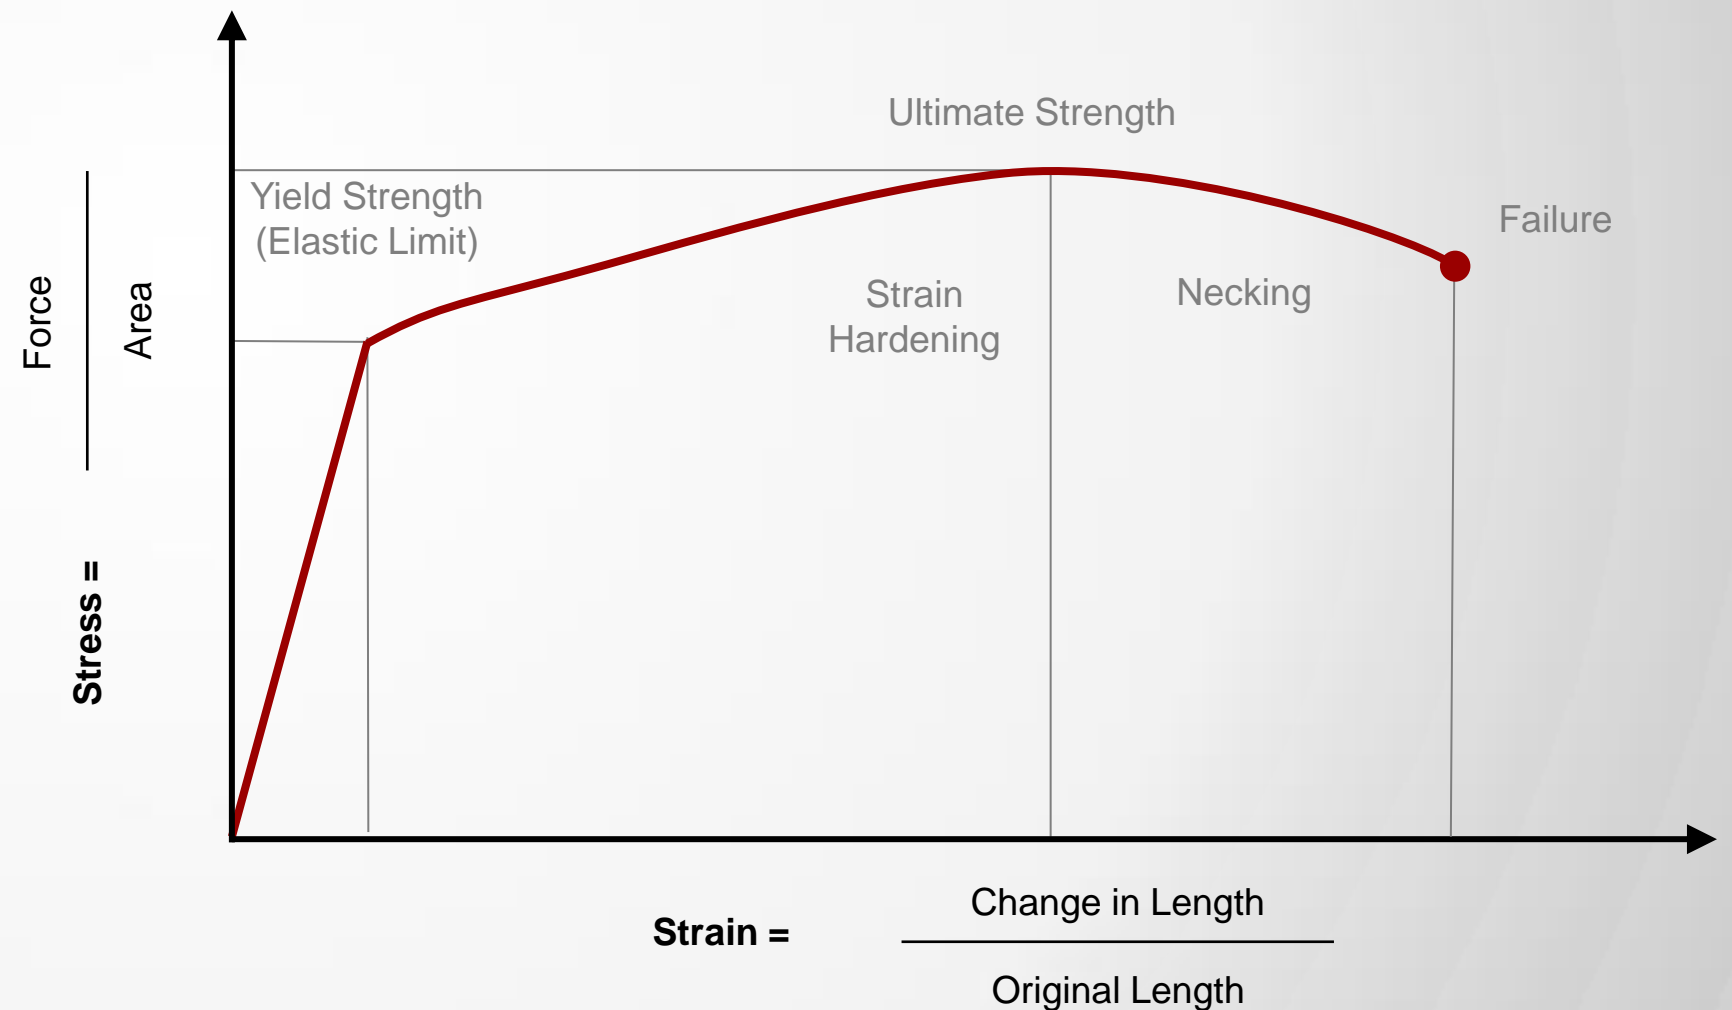

- Young's Modulus = 3,193 ksi
- Poisson's Ratio = 0.275

FOS

- Yield Strength = 30 ksi
- Ultimate Tensile Strength = 50 ksi

Thermal

- Thermal Conductivity = 1,259 Btu in/(ft² hr*F)
- Linear Expansion = 21.6E-6 in/(in*F)
- Specific Heat = 0.356 btu/(lbmass*F)

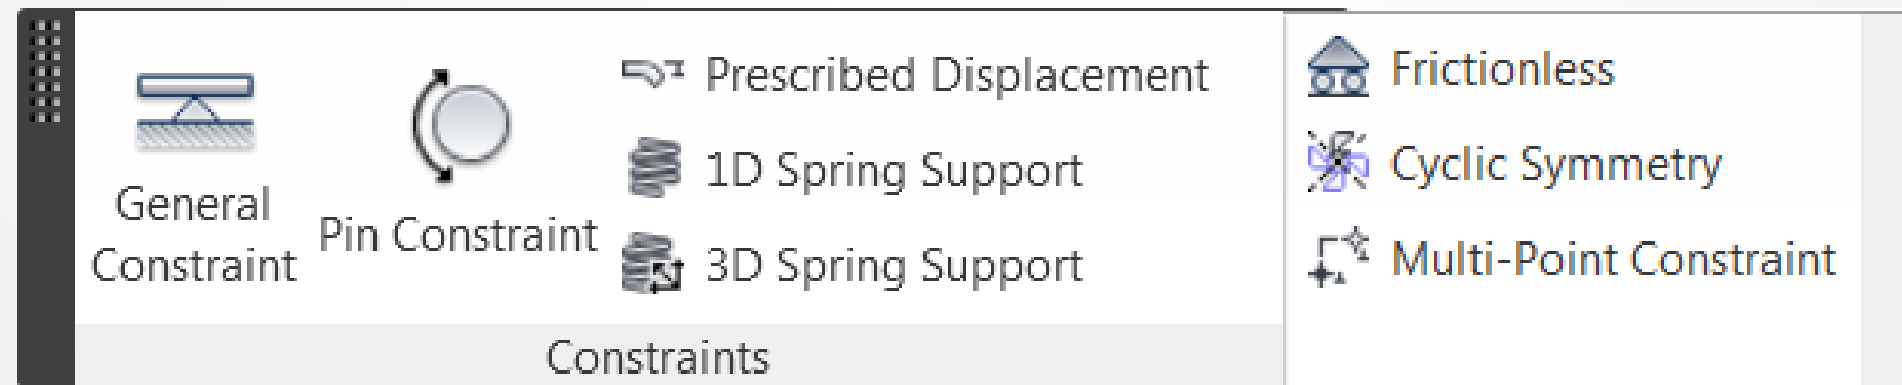

Loads

Structural loads are forces applied to a part or assembly during operation and cause the model to displace, deflect, and induce stresses and strains

Constraints

Structural constraints restrict or limit the displacement of the model mesh nodes

Contact Conditions

Contact conditions are used to establish relationships between the nodes of contacting parts within an assembly

Bonded

Welded

Free/No Contact

Surface Contact

Sliding/No Separation

Separation/No Sliding

Shrink Fit/Sliding

Shrink Fit/No Sliding

Edge Contact

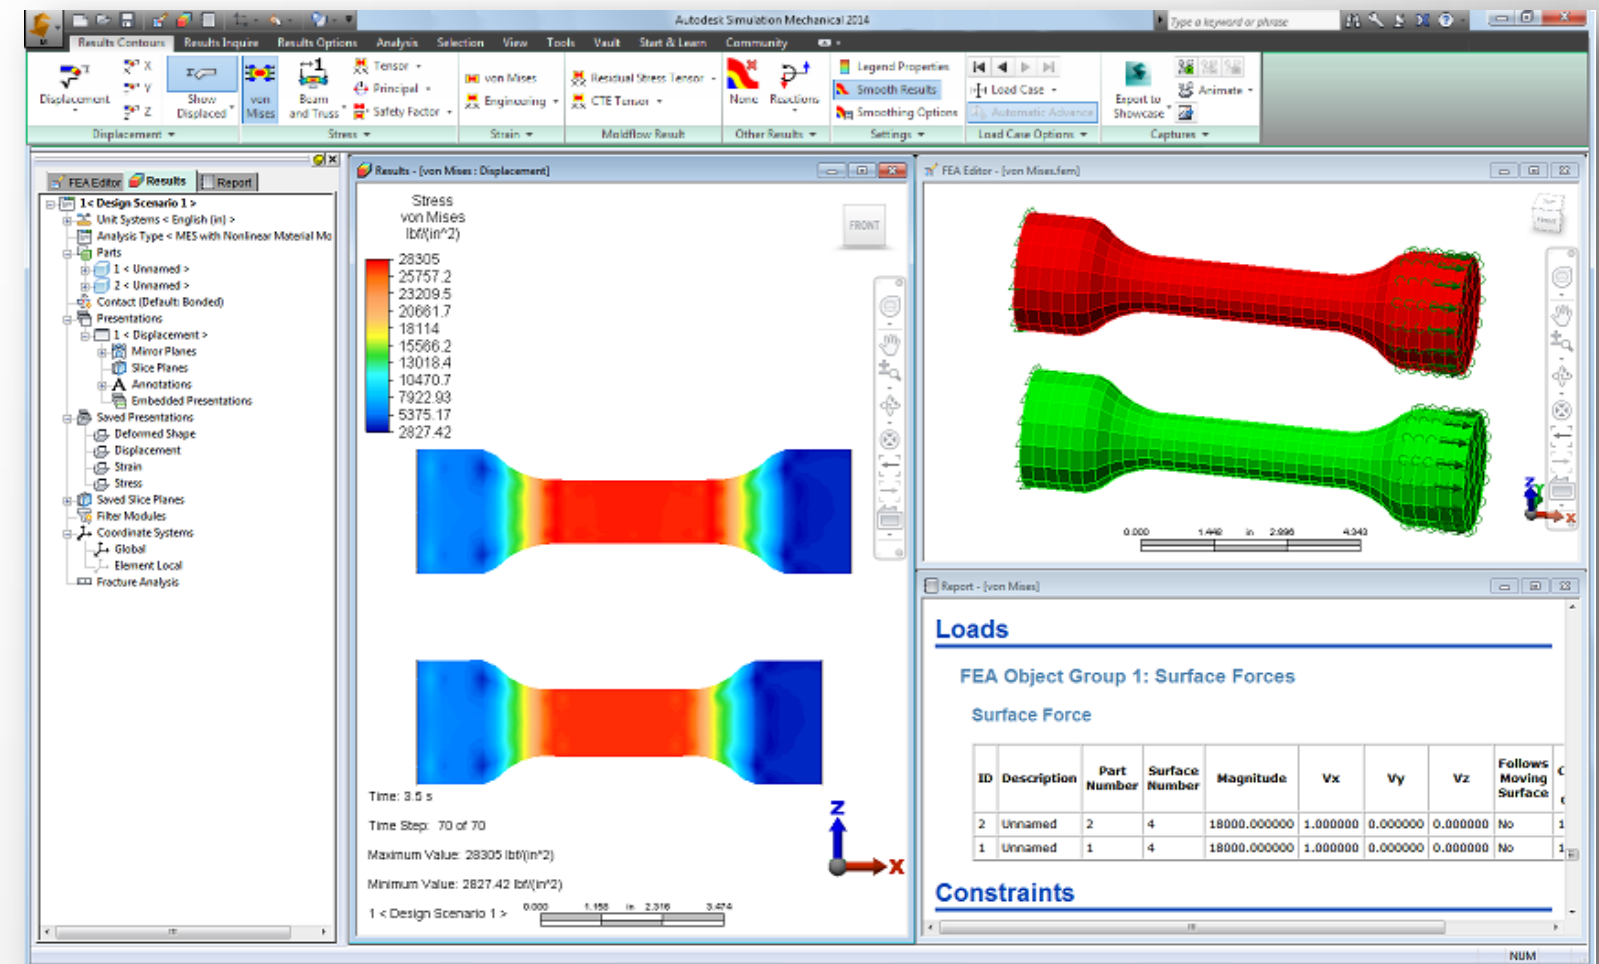

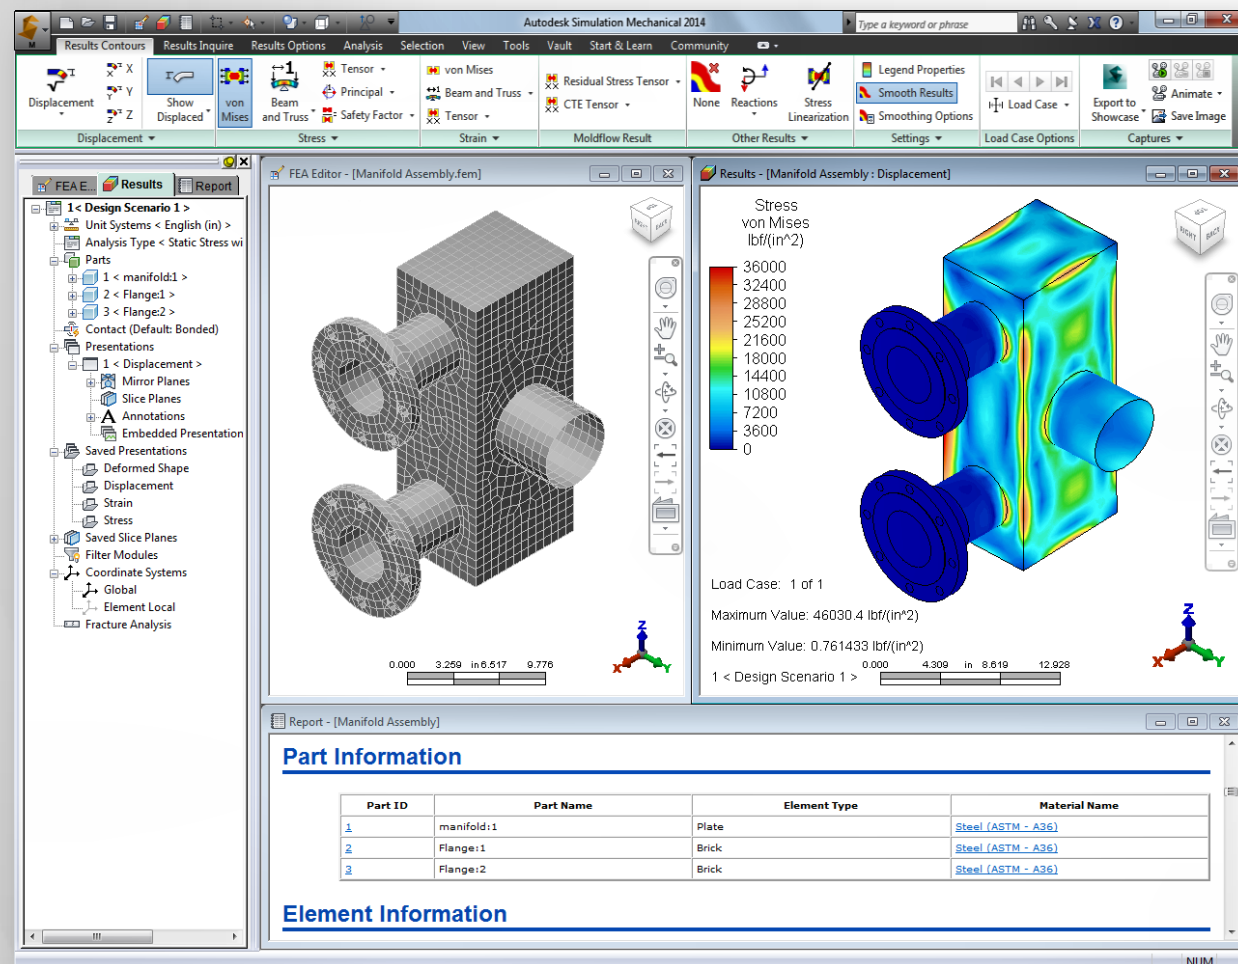

Simulation Solving

Running or solving the simulation processes and calculates the results based on the parameters established

Results

The simulation results can be viewed and exported as a report to make intelligent decisions

Reviewing Results

- Simulation does not always replace the need for physical testing
- The engineer / analyst still needs to interpret the results to make final decisions

Displacement

The displacement results show the magnitude of the model deformation from the original shape

Von Mises Stress

Formula for combining three principal stresses into an equivalent stress to compare to the material stress properties

The equation used is:

$$\sqrt{0.5[(S_x - S_y)^2 + (S_y - S_z)^2 + (S_z - S_x)^2] + 3(S_{xy}^2 + S_{yz}^2 + S_{zx}^2)}$$

where S_x , S_y , and S_z are the axial stresses in the global directions, and S_{xy} , S_{yz} , and S_{zx} are the shear stresses.

In terms of the principal stresses S_1 , S_2 and S_3 :

$$\sqrt{0.5[(S_1 - S_2)^2 + (S_2 - S_3)^2 + (S_3 - S_1)^2]}$$

Note: von Mises value is always positive.

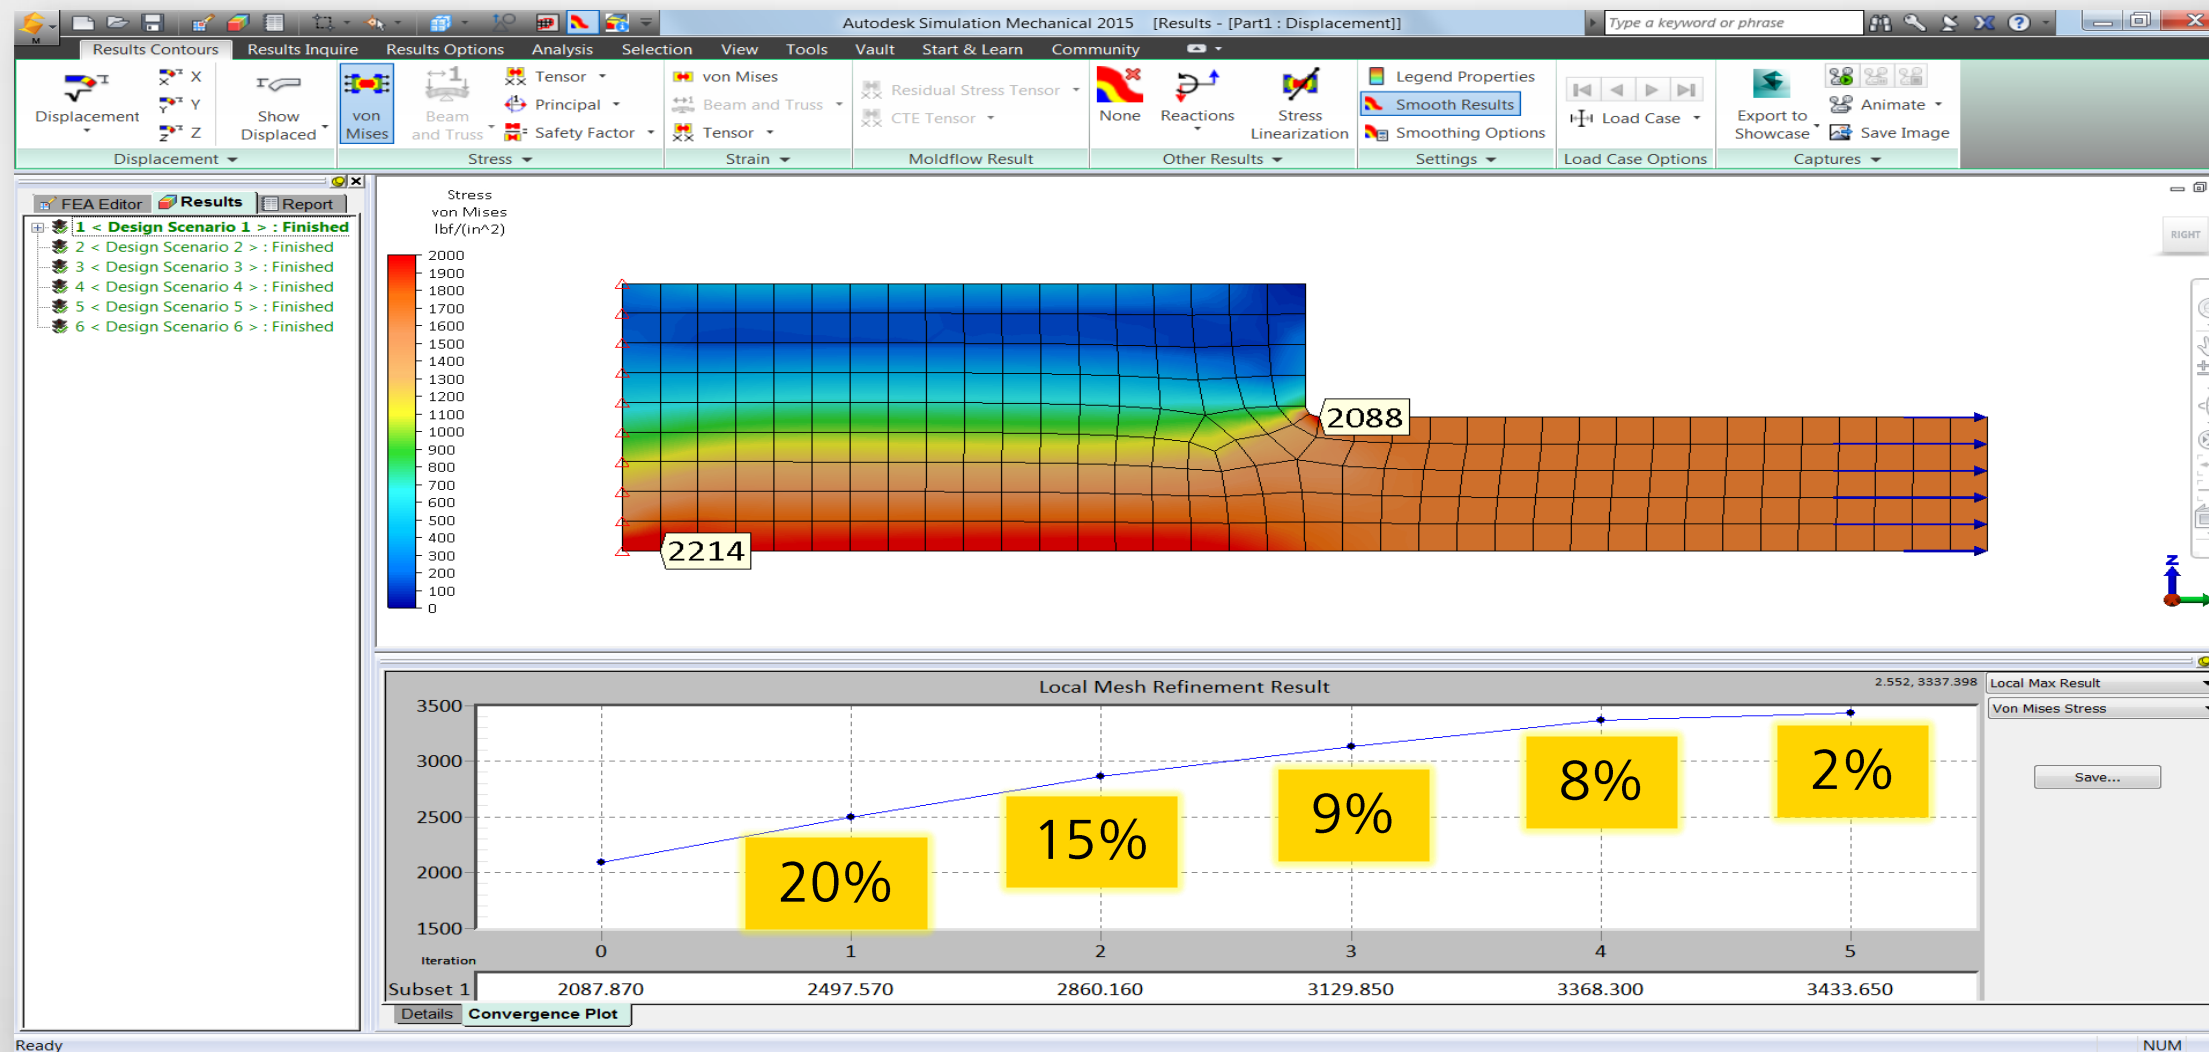

Safety Factor

Provides a ratio of how much stronger the object is than it usually needs to be for an intended load

$$\begin{aligned} \text{Safety Factor} &= \frac{\text{Material Yield Strength}}{\text{Maximum Von Mises Stress}} \\ 2 &= \frac{40,000 \text{ psi}}{20,000 \text{ psi}} \end{aligned}$$

Convergence

Convergence is the process of altering element sizes in high stress areas to ensure the specified result criteria has converged

Stress Singularities

A localized high stress area where the stress becomes infinite resulting in distorted results

Best Practices

- Ensure solution type (Linear / Nonlinear)
- Setup simulation to match real world
- Verify material properties
- Avoid putting loads on nodes or small edges to avoid stress singularities
- Ensure your results converge

FEA Software

- Conceptual Simulation (Apps)
- FEA Features Built into Design Tools
- Purpose Built Simulation Software

Autodesk Mechanical simulation portfolio

Mechanical simulation

Use comprehensive Finite Element Analysis (FEA) to predict product performance through linear, nonlinear, thermal, and dynamic analysis. Optimize designs and validate product behavior before manufacturing.

Simulation Mechanical

Study finite element analysis (FEA) and mechanical event simulation.

Autodesk Nastran In-CAD

CAD-embedded FEA simulation, powered by our Autodesk Nastran solver.

Autodesk Nastran

FEA solver delivers accurate results for complex simulations.

AUTODESK®
PROJECT ARRO

Walkthrough

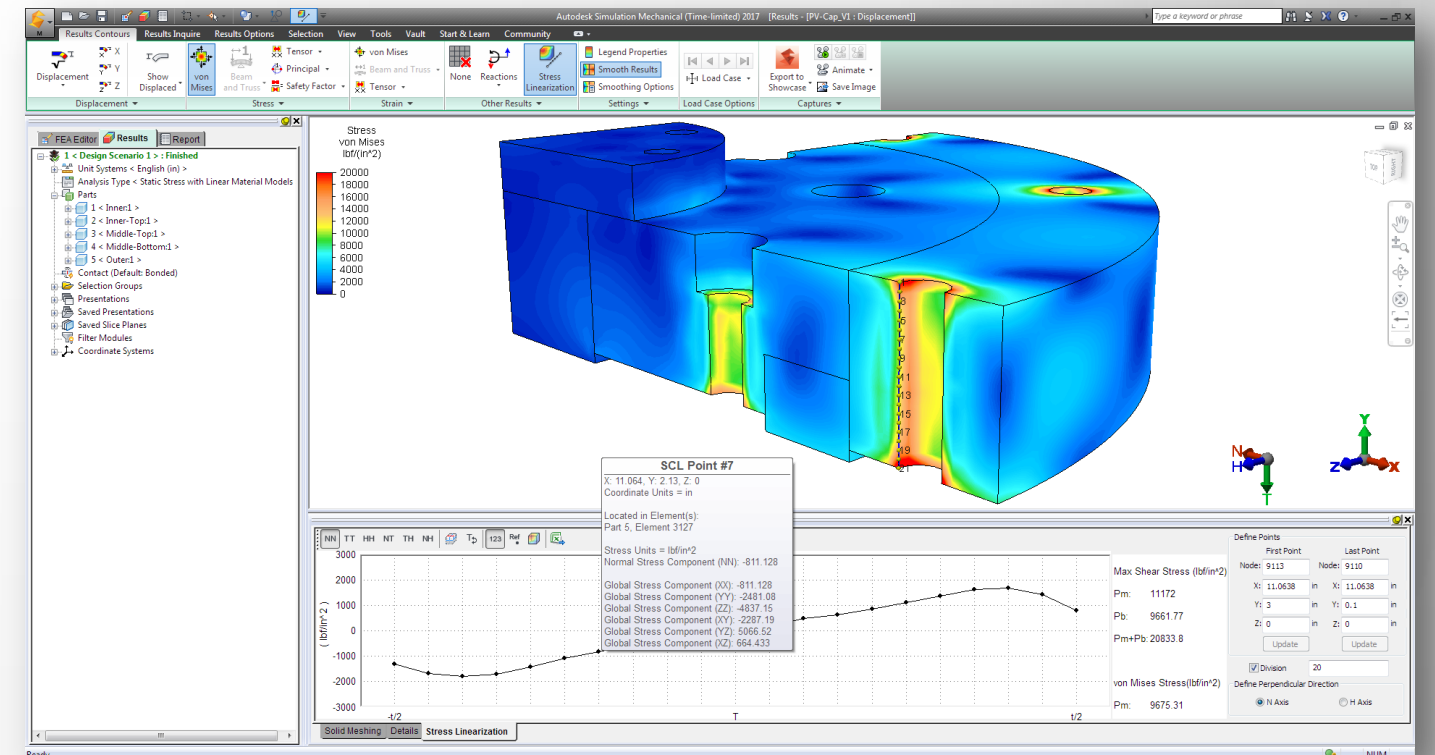

1st pass

- Start with geometry
- Simplify
- Assign loads and constraints
- Perform a first pass analysis

Deep dive

- Review the setup
- Refine the mesh
- Add connectors if needed
- Verify against ASME code

Recap

- Finite Element Analysis (FEA) Overview
- FEA Parameters
- FEA Best Practices
- FEA Software Introduction
- Analysis Walkthrough

How do the experts see Simulation in the Future of Making Things?

Wednesday, Dec. 2nd
4:30 – 5:30 PM
Murano 3301 Level 3

Scott Borduin
CTO
Manufacturing Product Group,
Autodesk

Greg Fallon
Vice President
Simulation Product Group,
Autodesk

Roger Corn
Mechanical Engineer
Sony Visual Products

Rick Arthur
Director
Advanced Computing
Research, General Electric

What is an Autodesk® Help Webinar?

[Like \(8\)](#)
[Share](#)

Apr 09 2015

AUTODESK® HELP WEBINARS

The Autodesk Help Webinar series is designed to showcase time-saving tips and tricks that can be used to immediately increase your productivity. This live set of interactive training sessions hosted by our very own Autodesk Technical Support Specialists offers a unique look into some of the most impactful in-product features and functionality that you may not already be familiar with.

The webinar format is a 20 - 40 min period of in-depth topic discussion. The remainder of the hour is an open question & answer session covering any topic of interest by the audience. The webinar is considered a series and after signing up you will be notified of future events.

BUILD YOUR NASTRAN IN-CAD IQ

Nastran In-CAD leverages the advanced Autodesk Nastran solvers within both Autodesk Inventor and Dassault Solidworks to allow designers and engineers to embrace analysis-driven design. Sessions will be hosted by Autodesk finite-element analysis experts and cover everything from the theory behind FEA to advice on troubleshooting common issues and errors.

[SIGN UP HERE](#)

BUILD YOUR ROBOT SIMULATION IQ

Join the Autodesk Support Team as we help you explore how to leverage Robot to its fullest potential, covering: best modeling techniques as well as tips and tricks. We will help you to improve your workflow and reduce the time you need to complete your projects.

[SIGN UP HERE](#)

BUILD YOUR SIMULATION MOLDFLOW IQ

Are you interested in enhancing your Autodesk Moldflow skills? Join the Autodesk Support team for monthly webinars to learn different techniques for various road blocks you may encounter with your simulations. We will cover best practices, tips and tricks as well have Q&A throughout the session!

[SIGN UP HERE](#)

BUILD YOUR SIMULATION CFD IQ

The CFD industry is a complex and growing field for engineers around the world. Join the Autodesk Technical Support team as we help you explore how to leverage Simulation CFD to its fullest potential, covering: best practices, validation models, new product enhancements, and much more. Come and add your own personal insight and experiences during our open Q&A!

[SIGN UP HERE](#)

BUILD YOUR SIMULATION MECHANICAL IQ

Simulation Mechanical is Autodesk's finite-element analysis package for engineers and analysts, now with added advanced solvers from Autodesk Nastran. Learn about new features and tips and tricks to help boost your Mechanical IQ in this reoccurring webinar series hosted by Autodesk Technical Support Specialists and guest speakers who work with the software every day.
