

UT 20960: Capturing Reality - Incorporating Reality Capture into Utility Design and Use in SUE

Forrest Roy & Aaron Mason

Anchorage Municipal Light and Power
@MLandP

Incorporating Reality Capture for Utility Design and SUE

About us

- Forrest Roy
- Lead Locator
- Reality Capture Technician
- Aaron Mason
- Lead Drafter/CPR engineer
- GIS

Together, we push, prod, pull, convince, and argue our way into creating new and innovative ways for our company to advance

Anchorage Municipal Light and Power

- 30,000 customers
- Supply JBER military bases, University of Alaska Anchorage, all of Anchorage's hospitals
- New generation coming on line 2017
- Vertically integrated

Big thanks to Autodesk and Autodesk University

Class summary

Key learning objectives

At the end of this class, you will be able to:

- Discover different use objectives for point clouds and photogrammetry
- Learn how to gather data for a SUE model
- Learn how to use cameras to gather data for photogrammetry
- Learn how to use laser scanners and structured light scanners

The background of the slide is a photograph of several high-voltage power line towers and their associated cables. The scene is set during sunset or sunrise, with the sun low on the horizon, creating a warm orange and yellow glow. The sky is a mix of blue and orange, with some clouds. The power lines stretch across the frame, creating a sense of depth and scale.

Infrastructure is aging

The American Society of
Civil Engineers grades
America's infrastructure

D-

Recommends \$3.6 trillion
investment by 2020

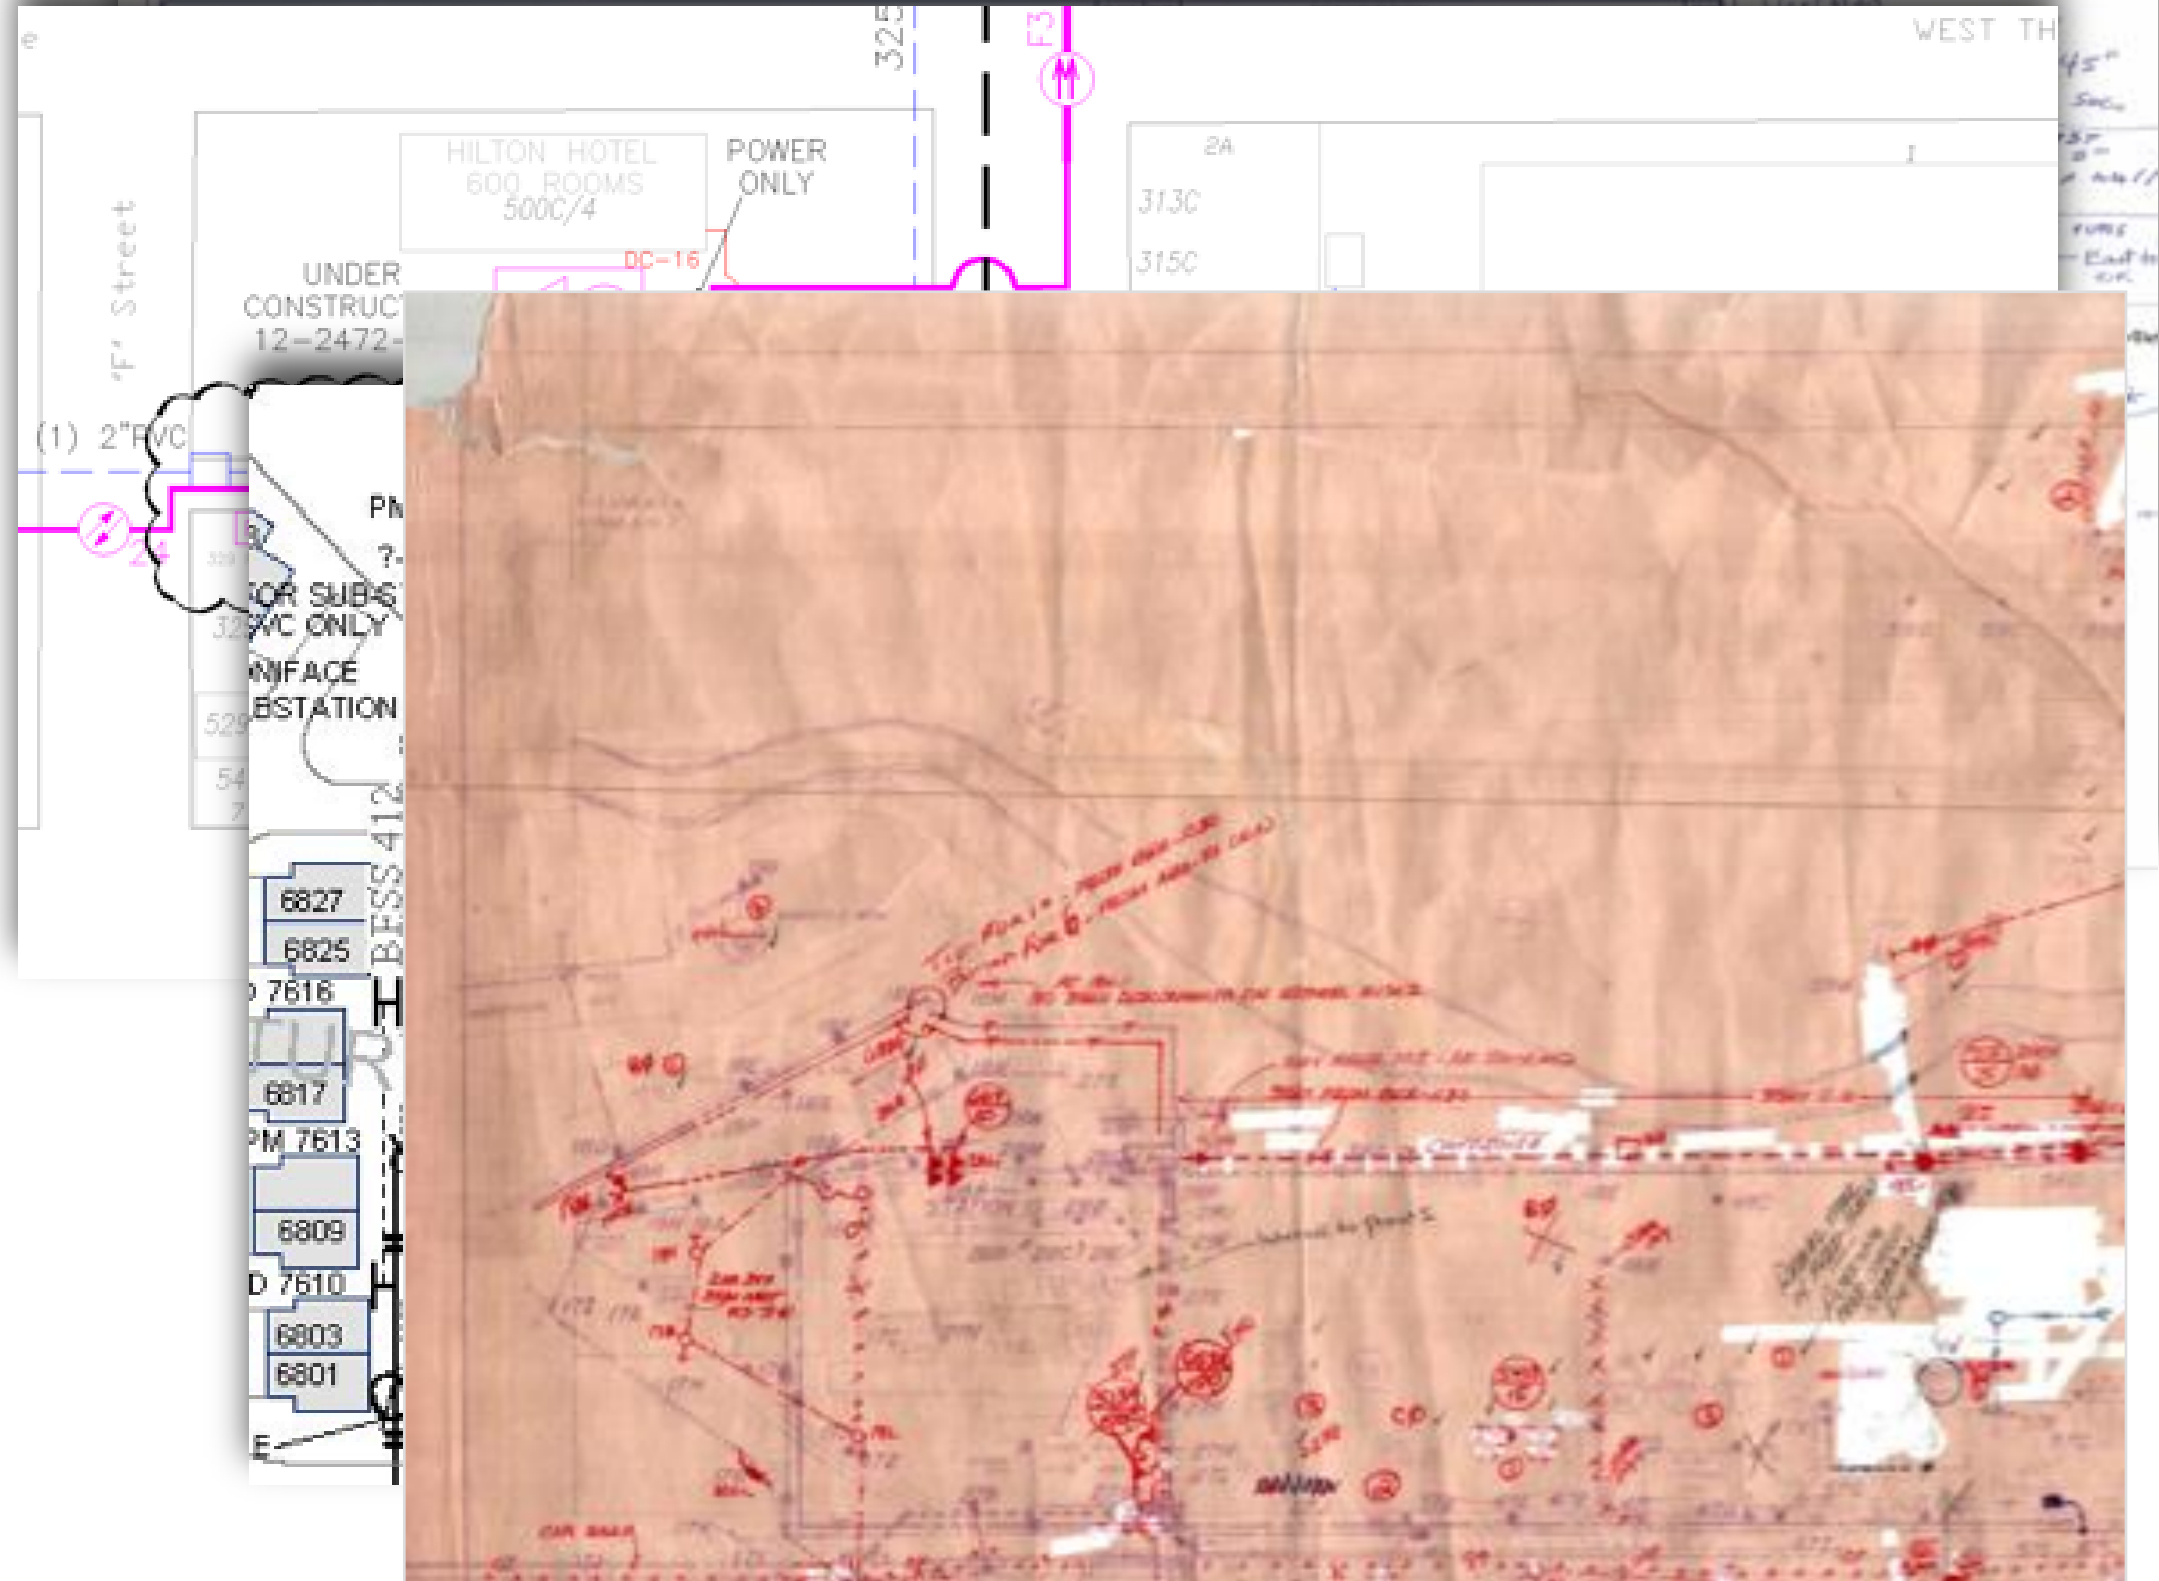

Aging infrastructure is only part of the problem

- Too often our records are ancient as well
- Or worse, our records are locked up inside someone's mind

Data Quality

- New builds will interface at some level with existing infrastructure
- Old data can be unreliable: incomplete, ambiguous, wrong or missing

Getting this back from the field

How can reality capture help us build the cities of tomorrow?

- Matching design with build-improved asbuilt process
- Cross checking existing facilities
- Broader understanding between different disciplines and the public

Memory is malleable

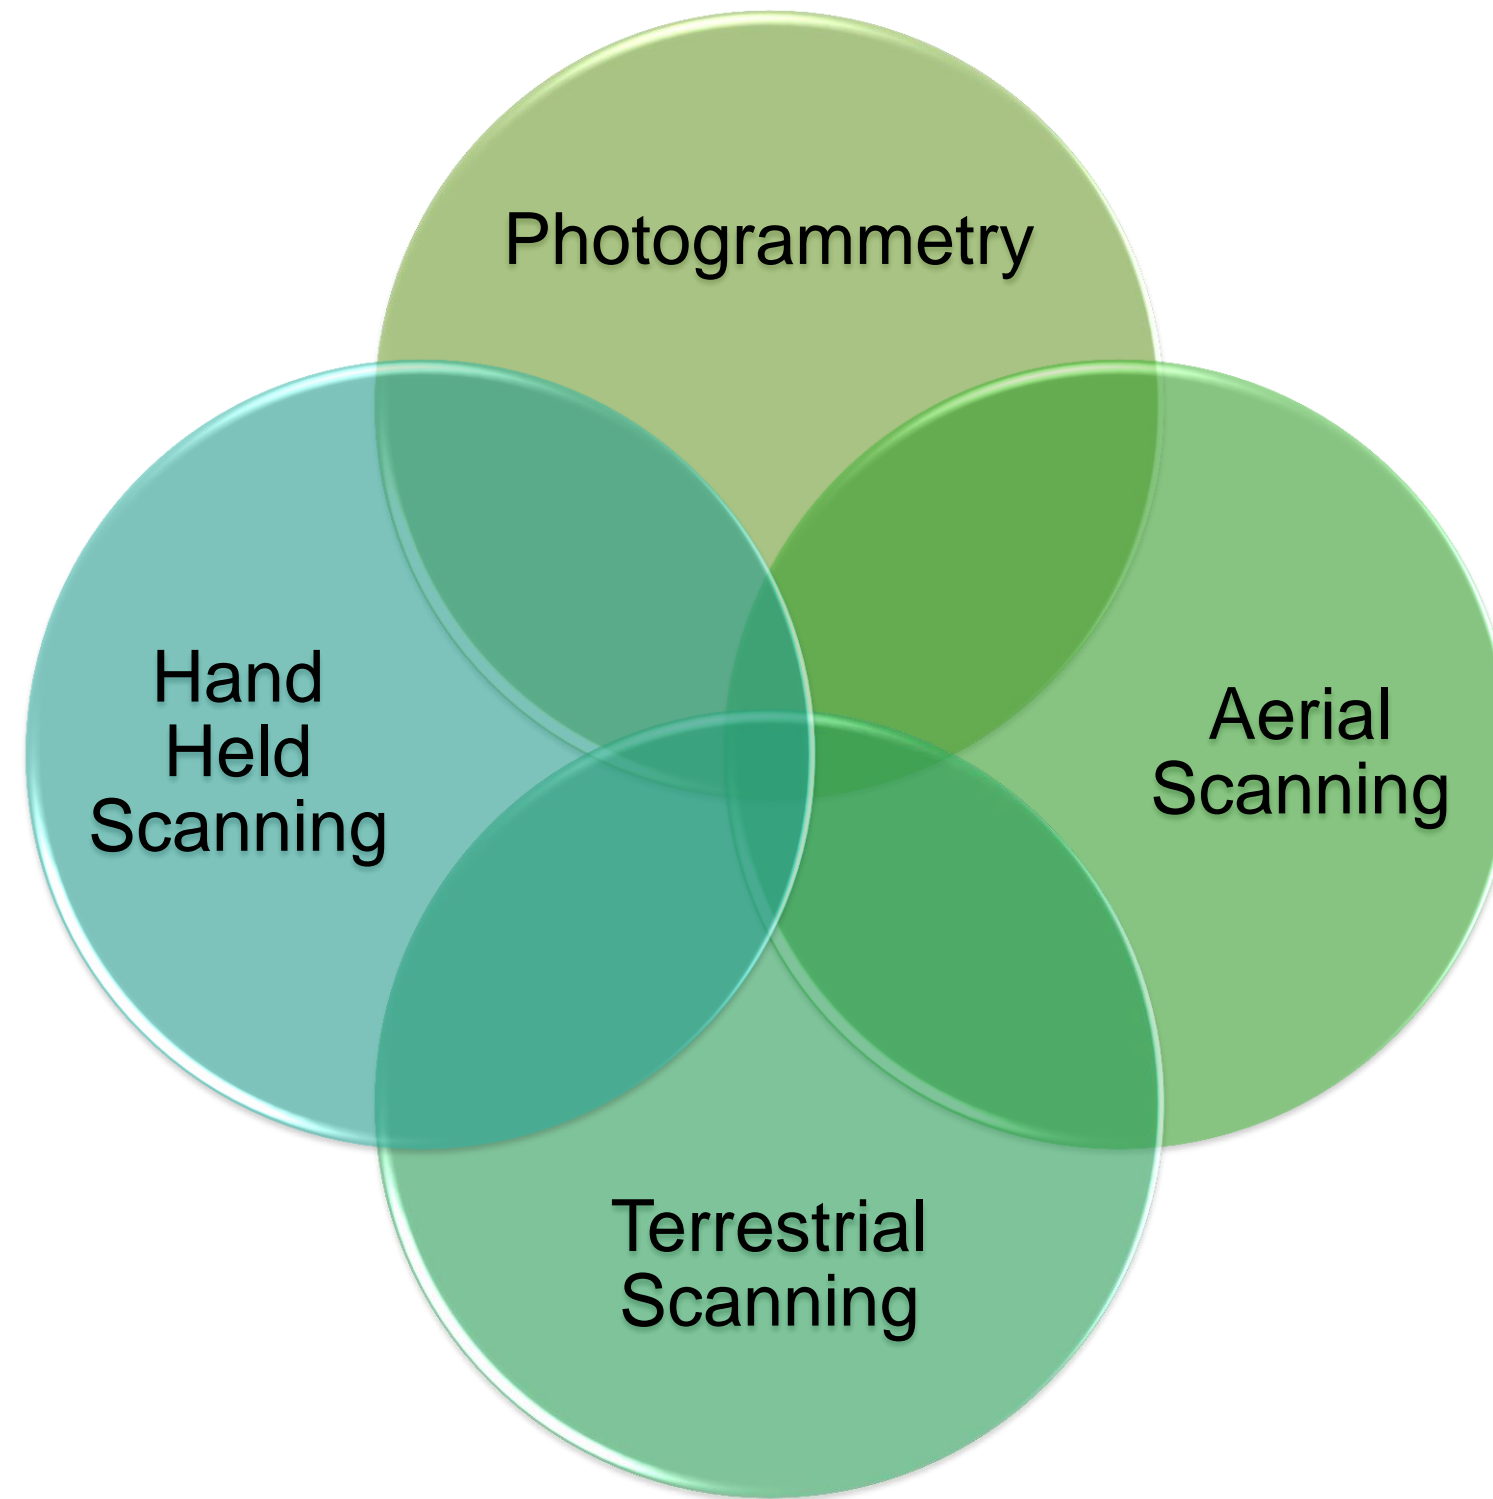

- “Luck
- Design

- Laser
 - T
 - A
 - H

ensing

SUE model

- Level D-records or 'oral recollections'
- Level C-records obtained from surface data
- Level B-geophysical methods
- Level A-precise measurement at a specific point

Level D records

Grade A data collection

Deliverables

All Utilities depicted at QL B unless otherwise noted.

QL A Data Summary (see QL A Supplemental Data Sheets for additional information):

TH 21: 6 non-encased telephone cables

elevation top of cable configuration: 186.15'
elevation bottom of configuration: 183.43'
Coords: N 441987.8011
E 3640280.1310

TH 23: 6 3/4" unknown function steel pipe
elevation top of pipe: 181.12'
Coords: N 441997.3469
E 3640280.8993

TH 25: concrete encased electric duct
elevation top of duct: 186.87'
elevation bottom duct: 183.55
width of duct: 4.66'
Coords: N 442032.1007
E 3640281.2239

TH 22: 8 3/4" C.I. water

elevation top of water line: 184.67'
 Coords: N 441992.7925
 E 3640280.0092

TH 24: Fiber Optic concrete telephone duct
elevation top of duct: 184.41'
elevation bottom of duct: 182.22
width of duct: 2.62'
Coords: N 442022.7934
E 3640281.0571

Photogrammetry

Different 'methods' of capture

- Surround method (which you saw above, most common)
- Interior method
- Grid method
- Spiral method
- Corridor method

Photogrammetry Surround

- Lighting
- Camera stability
- Overlap

Our first vault

 | AUTODESK® ReMake

Photogrammetry interior

- Autodesk recommends this method for interiors

Using Underground Locates

6

10/8MTLNG-204
36th ave Denali

11/10/2016 18:12:2

Locate Data

Mode : ACTIVE
Frequency : 900000Hz
Log : 18
Antenna Mode : PEAK
Compass Angle : 1deg
Depth : 165(cm)
Fault Find Signal : 0.00dBuV
Current : 1.49mA
CD Phase : 0.00deg
Sig Strength : 41.3%
Gain : 86dB
GPS Mode : INTERNAL

MRX Data

Type : OFF
Signal : 0.00dBuV
Depth : 0(cm)
Gain : 0dB

Imported Locates

Underground locates aggregated

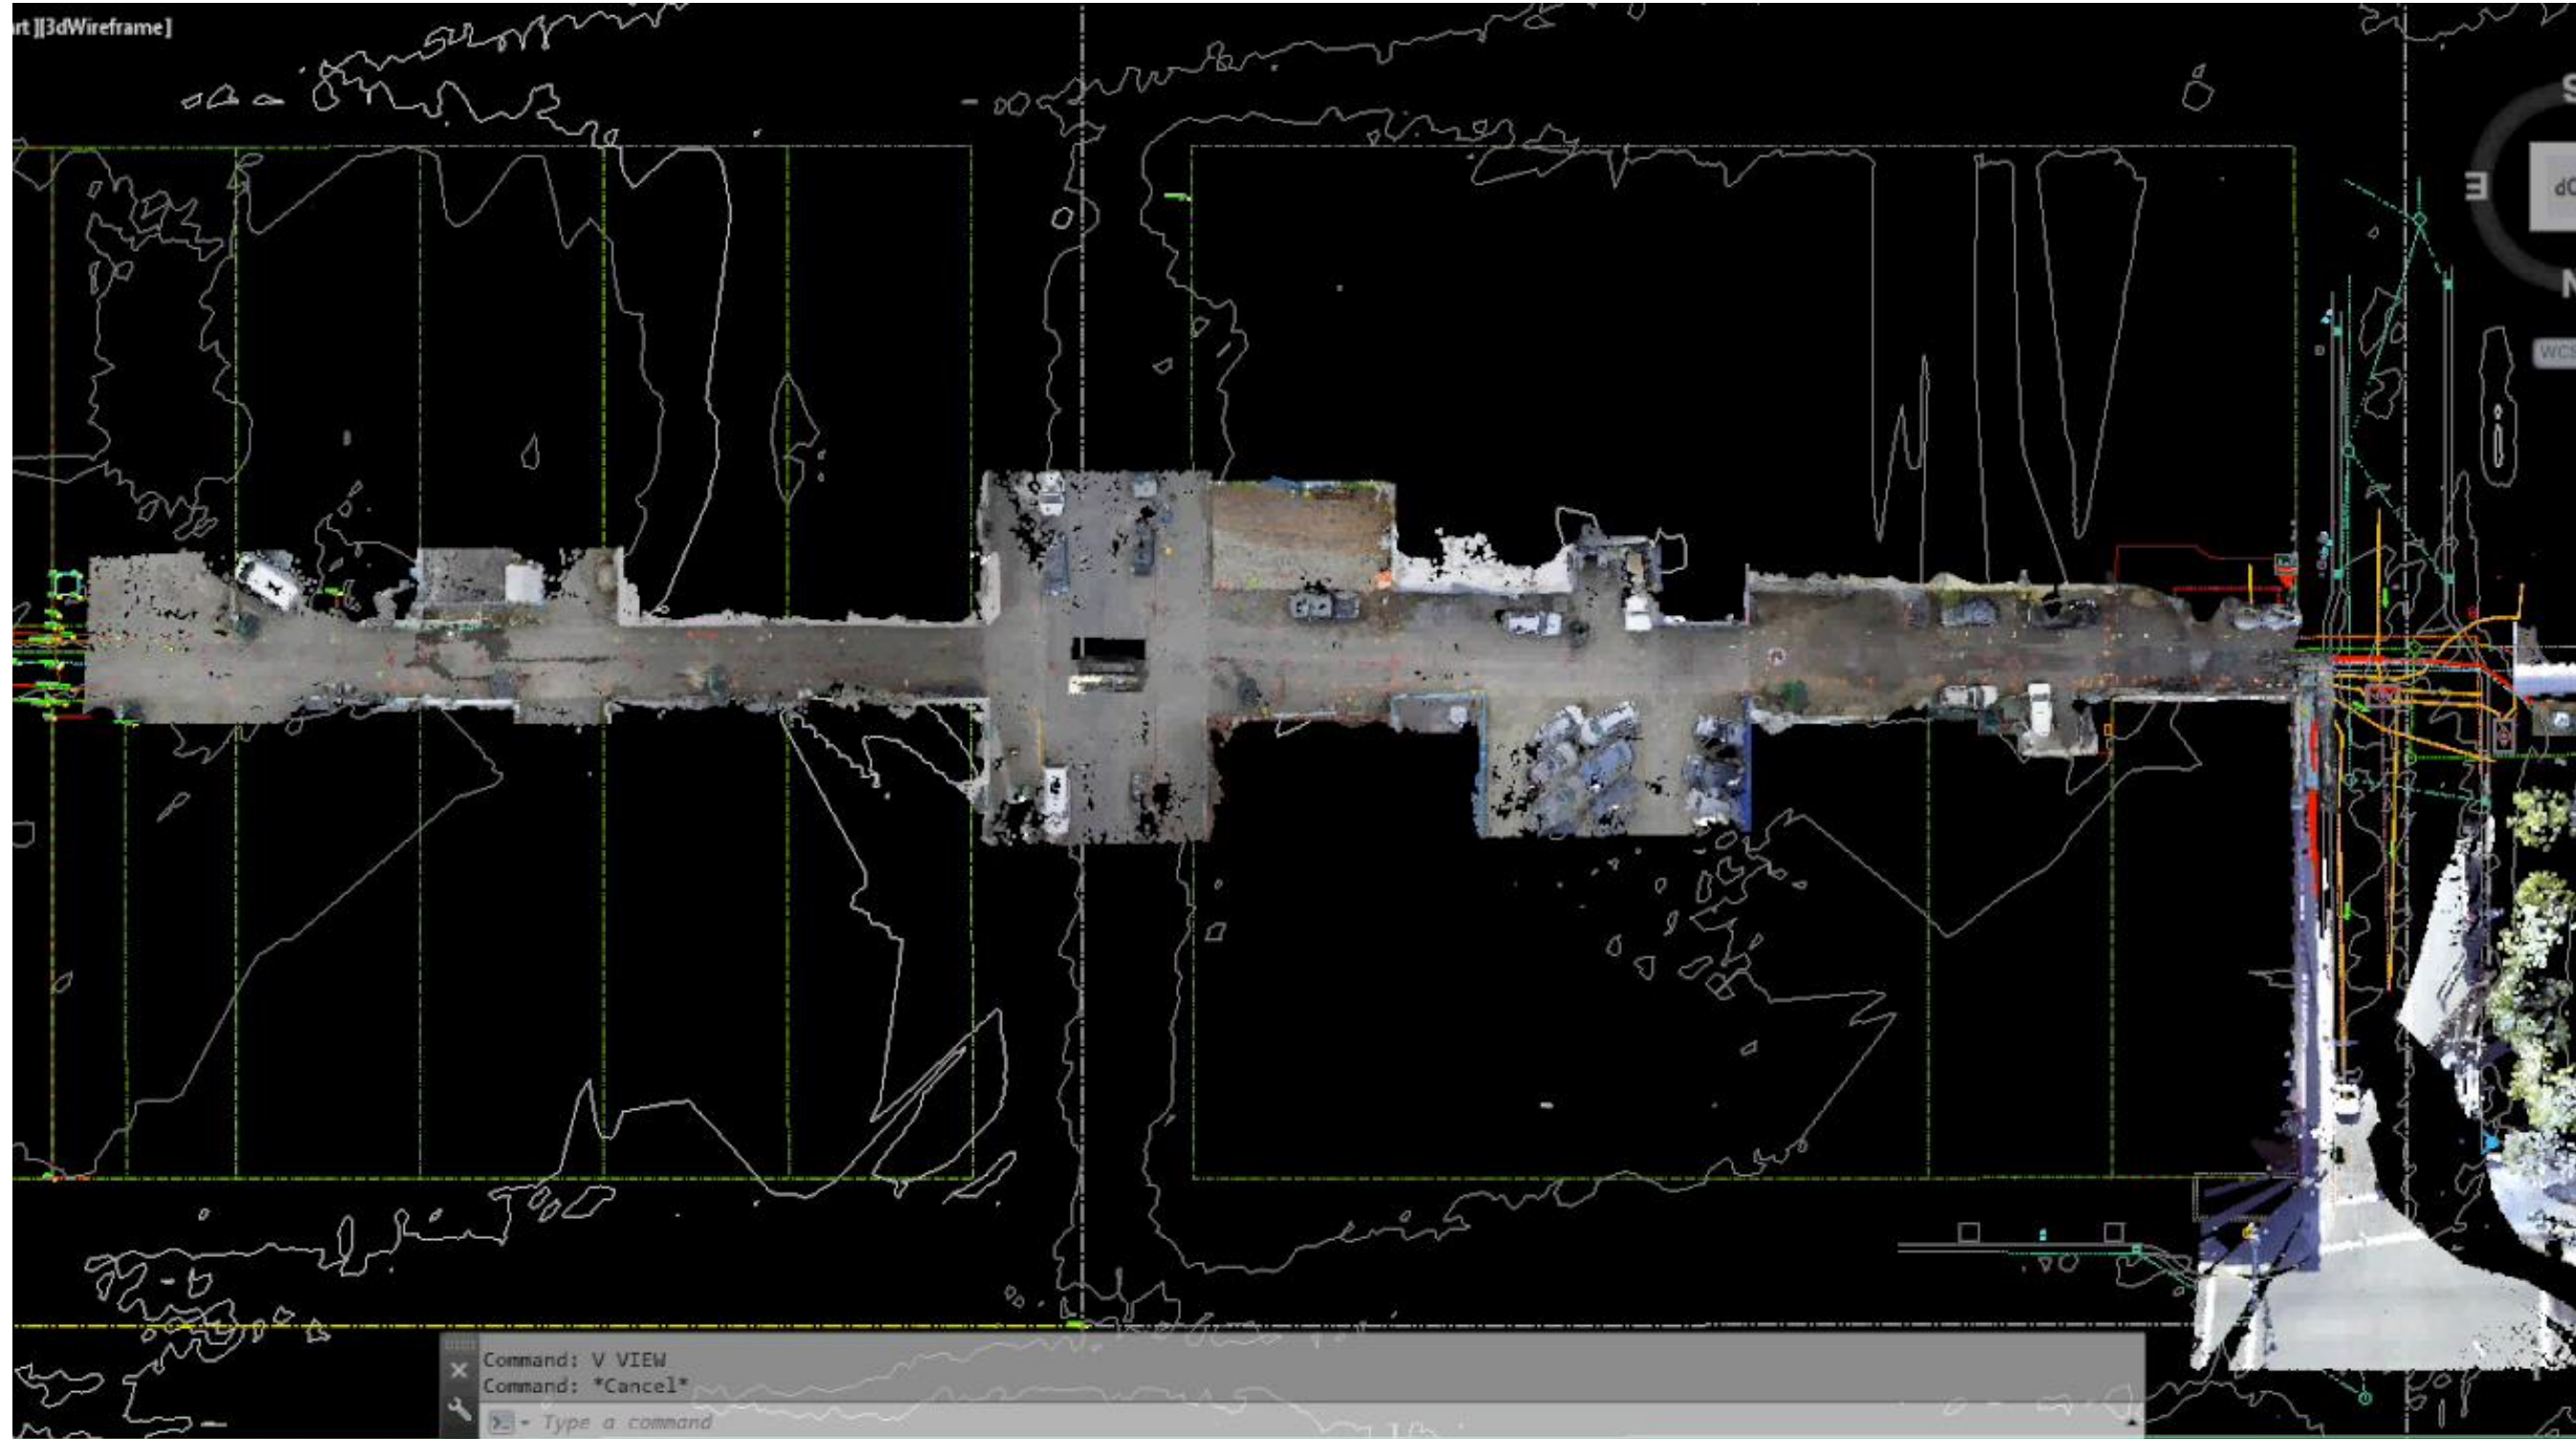

How do we capture it? And how do we use it?

Visualizing design

Aggregating point clouds

Use IFW for demonstration

The big picture

How did I do?

- Your class feedback is critical. Fill out a **class survey** now.
- Use the AU mobile app or fill out a class survey online.
- Give feedback after each session.
- AU speakers will get feedback in real-time.
- **Your feedback results in better classes and a better AU experience.**
