

# VFX Workflows For The Visualization Artist

Kim Lee

Senior CG Generalist - FuseFX

# Be heard! Provide AU session feedback.

- Via the Survey Stations, email or mobile device.
- AU 2016 passes awarded daily!
- Give your feedback after each session.
- Give instructors feedback in real-time.

# Class summary

In this class we will examine some production-tested approaches using both old and new tools in 3ds Max software to create things like large crowds of people and animated foliage, as well as workflows used for working with large scene files.

# CACHE IS KING

# Key learning objectives

At the end of this class, you will be able to:

- How to use Flex modifier to mimic a dynamic water surface
- Understand Pros and Cons of various Caching options
- How to use Houdini Ocean plugin (free)
- Use Pflow for simple water applications
- Harness the power of Vray Proxies and Vray Instancer
- Circumvent some limitations of Populate
- Avoid some performance hindering situations in 3ds Max

# Topics Covered

We will be examining the following:

- Create quick small and large scale water surfaces
- Generate trees/forests for wide aerial shots
- More efficiently implement crowds into large scenes

# Quick Water Surfaces

# Quick Small Scale and Large Scale Water Surfaces

- Good for shots where water is not primary focus
- Limited interaction with other objects
- Uses Flex Modifier and Houdini Ocean (a free Plugin)
- Alembic Caching
- Recommended 3<sup>rd</sup> Party plugins
  - Frost (Thinkbox Software)
  - Xmesh (Thinkbox Software)

# Small Scale Water Surfaces

- Fountains/Decorative Ponds

# Small Scale Water Surfaces

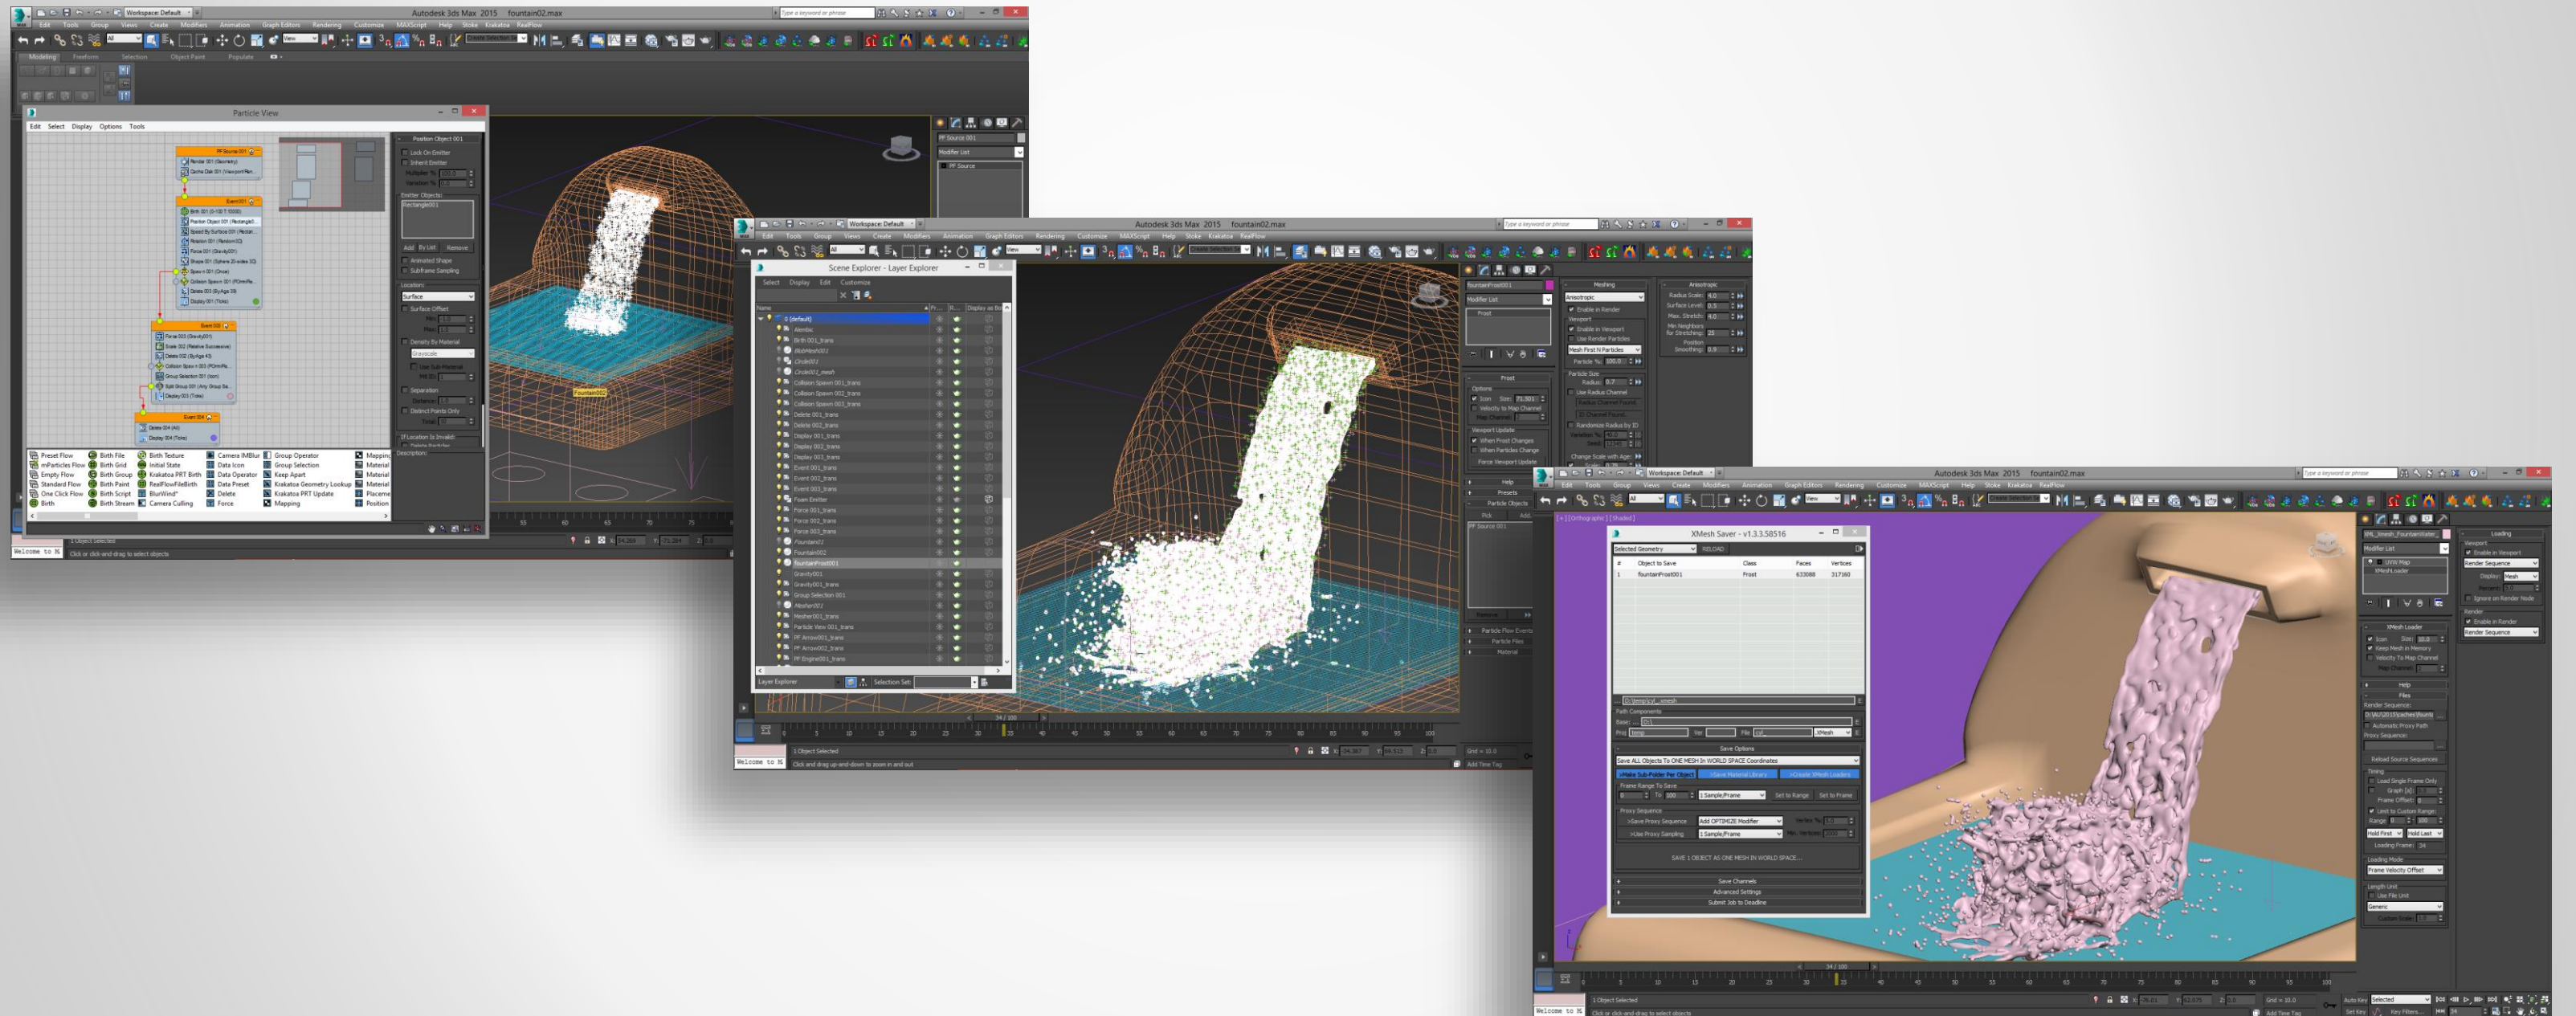

## Workflow Overview

- Create Pflow stream
- Mesh the Pflow stream
- Cache the meshed Pflow stream
- Animate proxy objects that will disturb the surface
- Run flex simulation
- Cache the flex water surface
- Create Pflow foam system

# Small Scale Water Surfaces

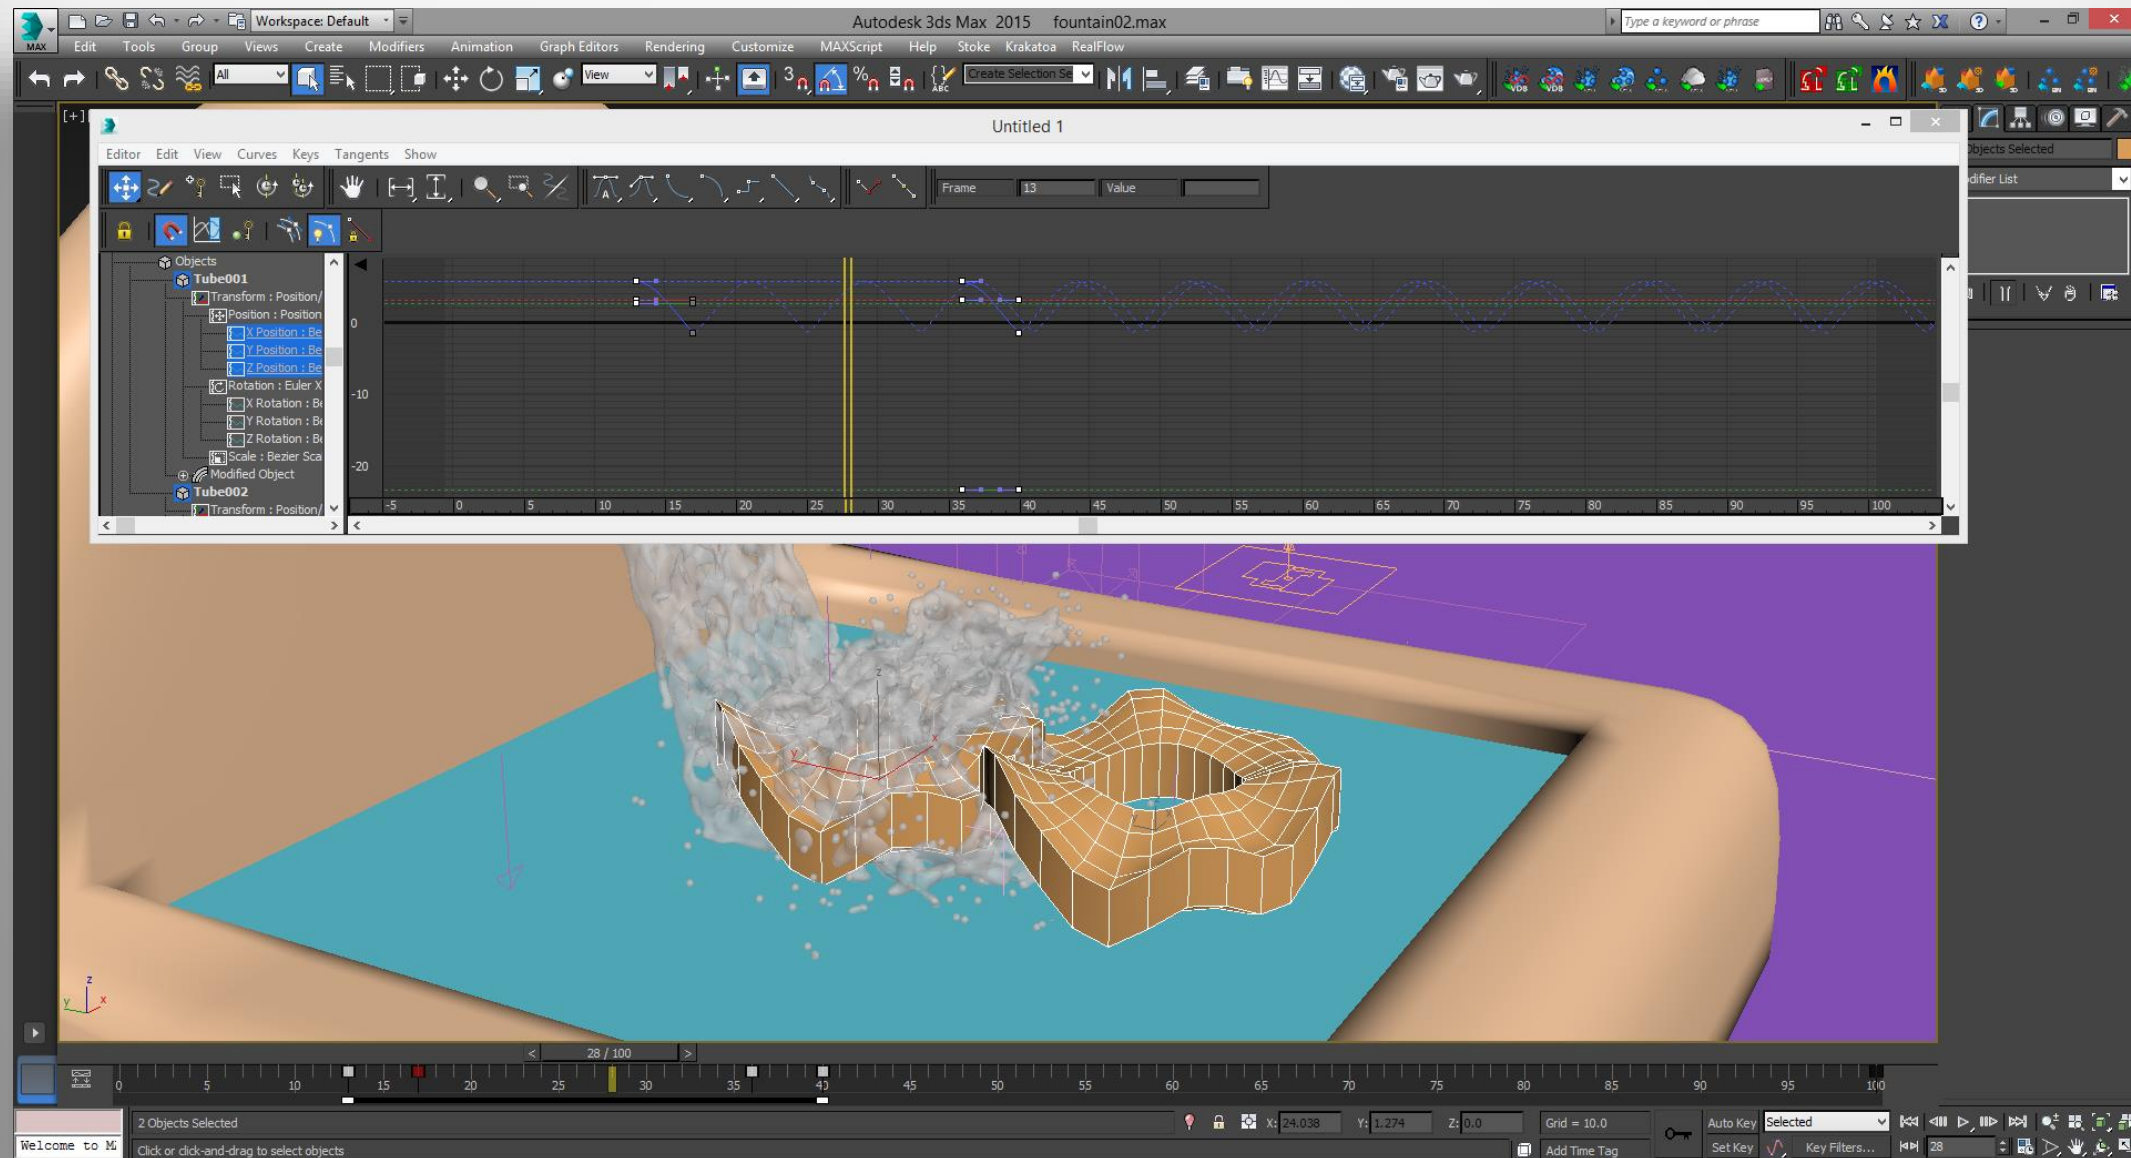

## Create, Mesh and Cache a Pflow Water Stream

# Small Scale Water Surfaces

## Animate proxy objects

# Small Scale Water Surfaces

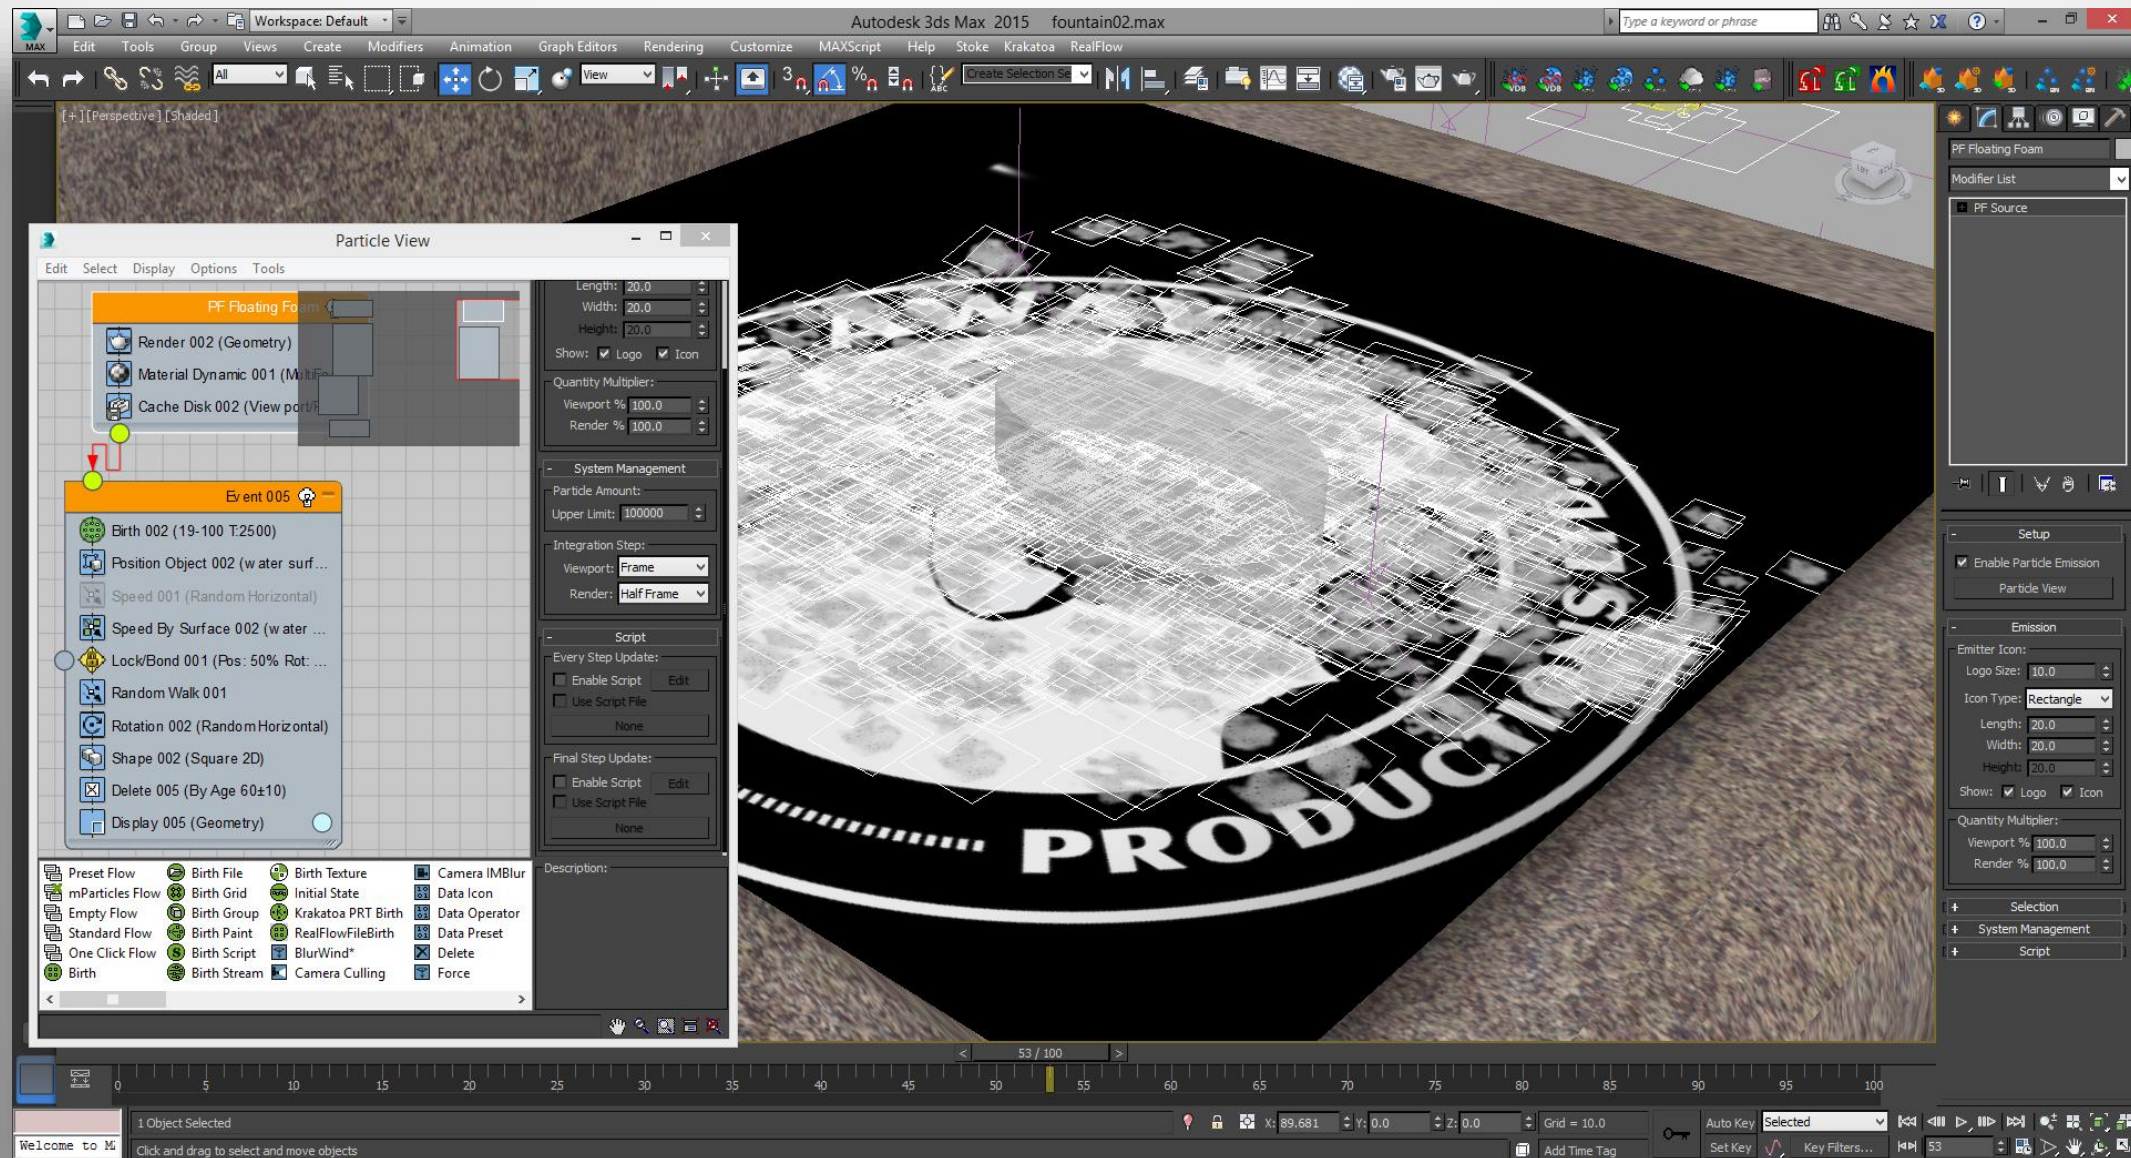

## Run flex simulation and cache

# Small Scale Water Surfaces

## Create Pflow foam system

# Large Scale Water Surfaces

- Lakes and Oceans

# Large Scale Water Surfaces

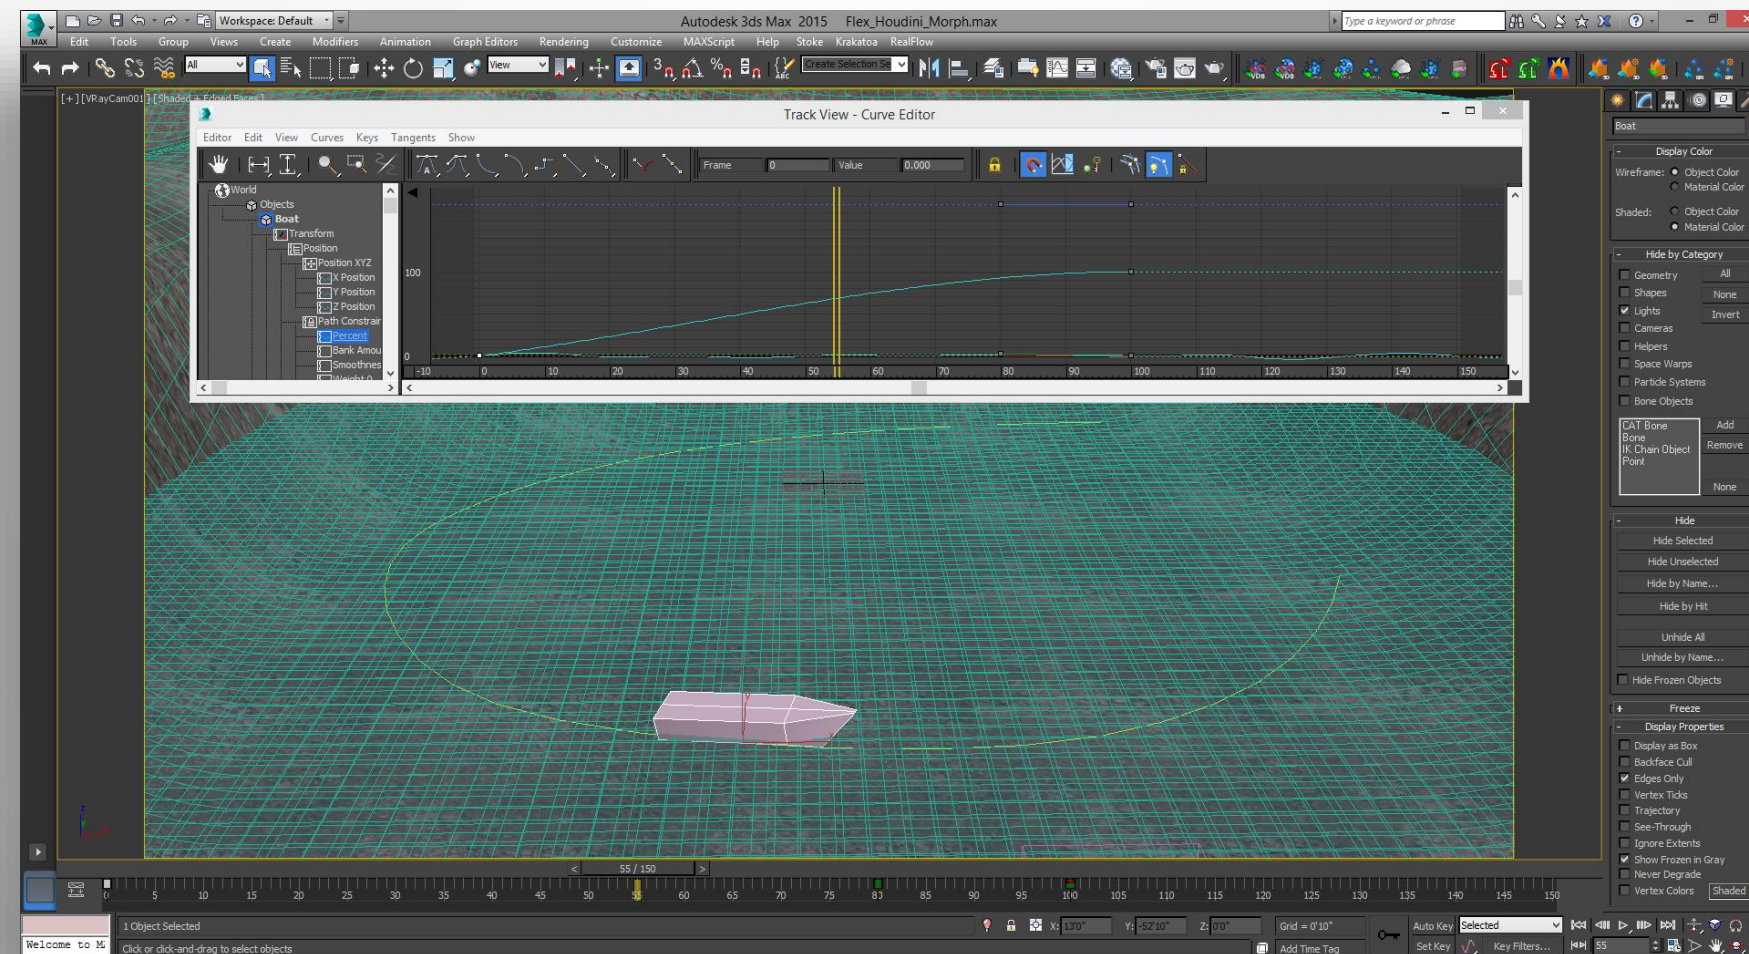

## Workflow Overview

- Create plane for water surface
- Create interaction objects and animate as needed
- Setup flex simulation
- Cache the flex water surface
- Add Houdini Ocean
- Create Pflow foam system

# Large Scale Water Surfaces

## Workflow Overview

- Create plane for water surface
- Create interaction objects and animate as needed

# Large Scale Water Surfaces

## Workflow Overview

- Setup flex simulation
- Cache the flex water surface

# Large Scale Water Surfaces

## Workflow Overview

- Add Houdini Ocean

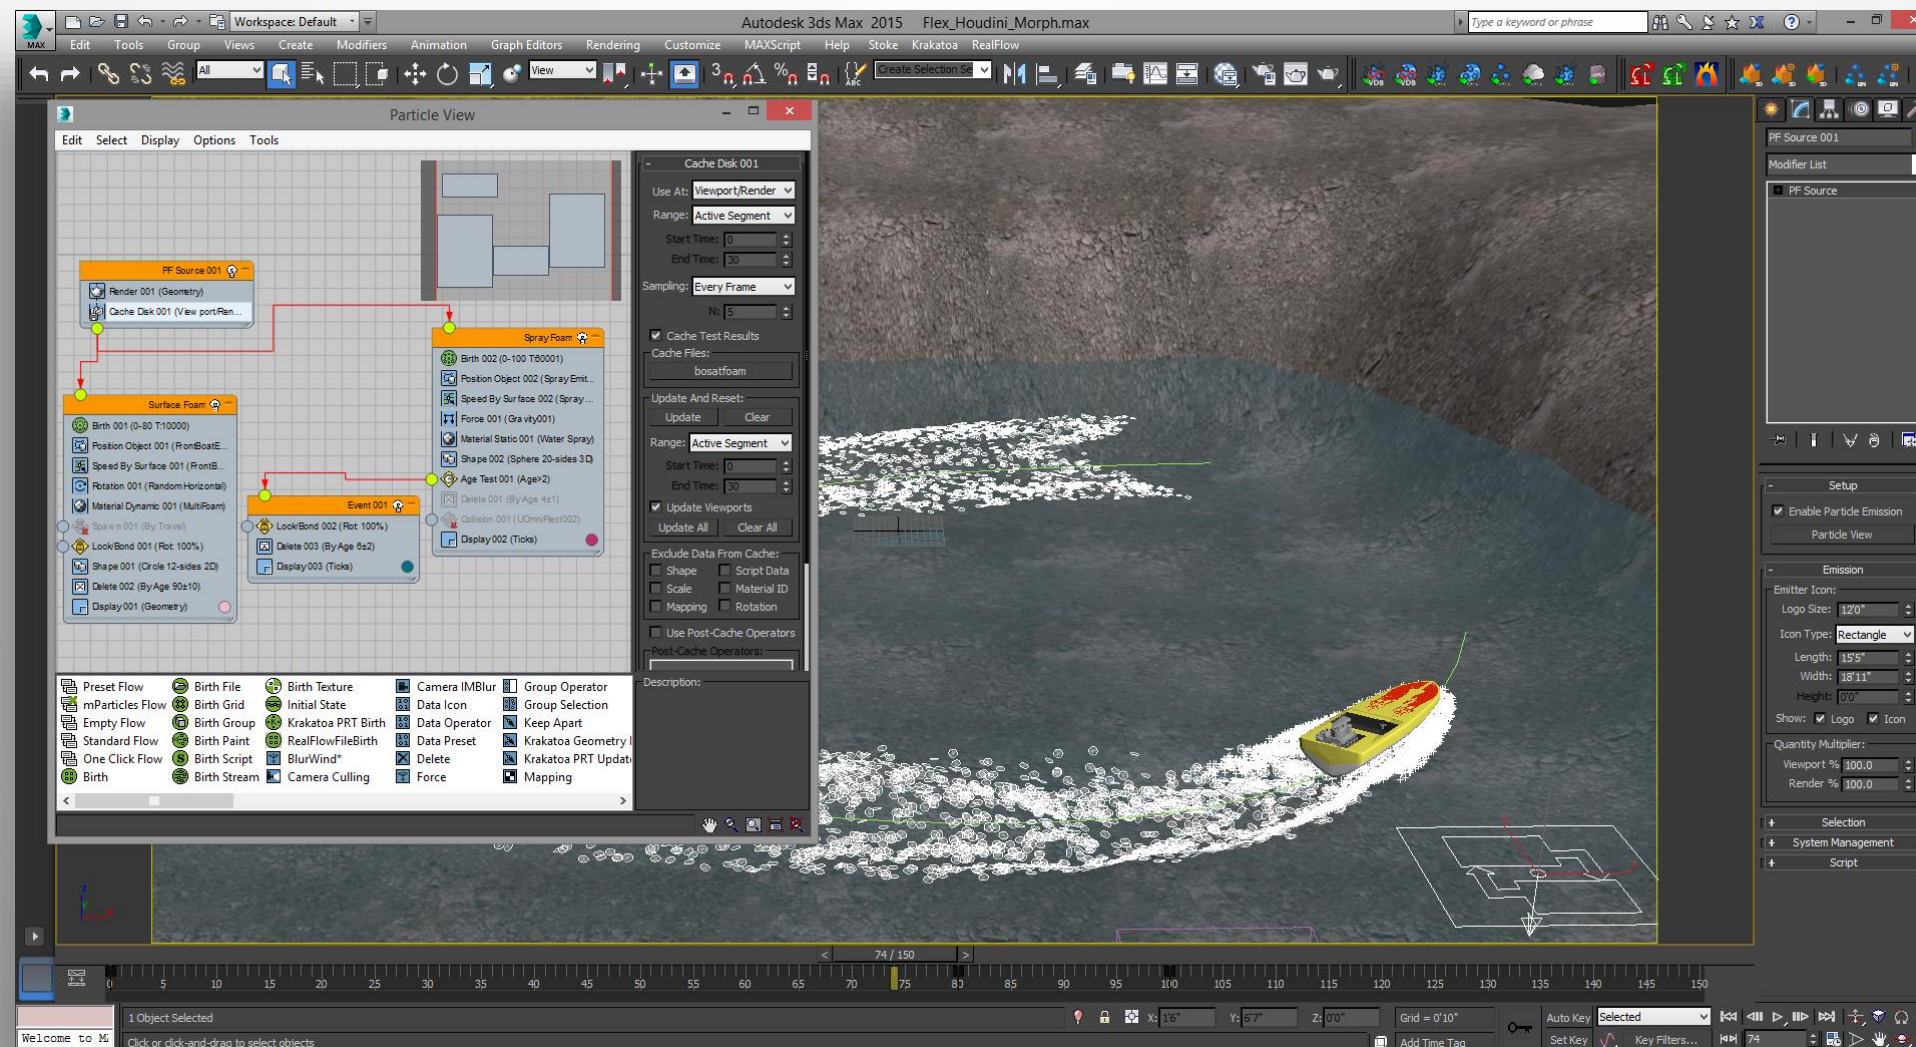

# Large Scale Water Surfaces

## Workflow Overview

- Create Pflow foam system

# Aerial View Foliage

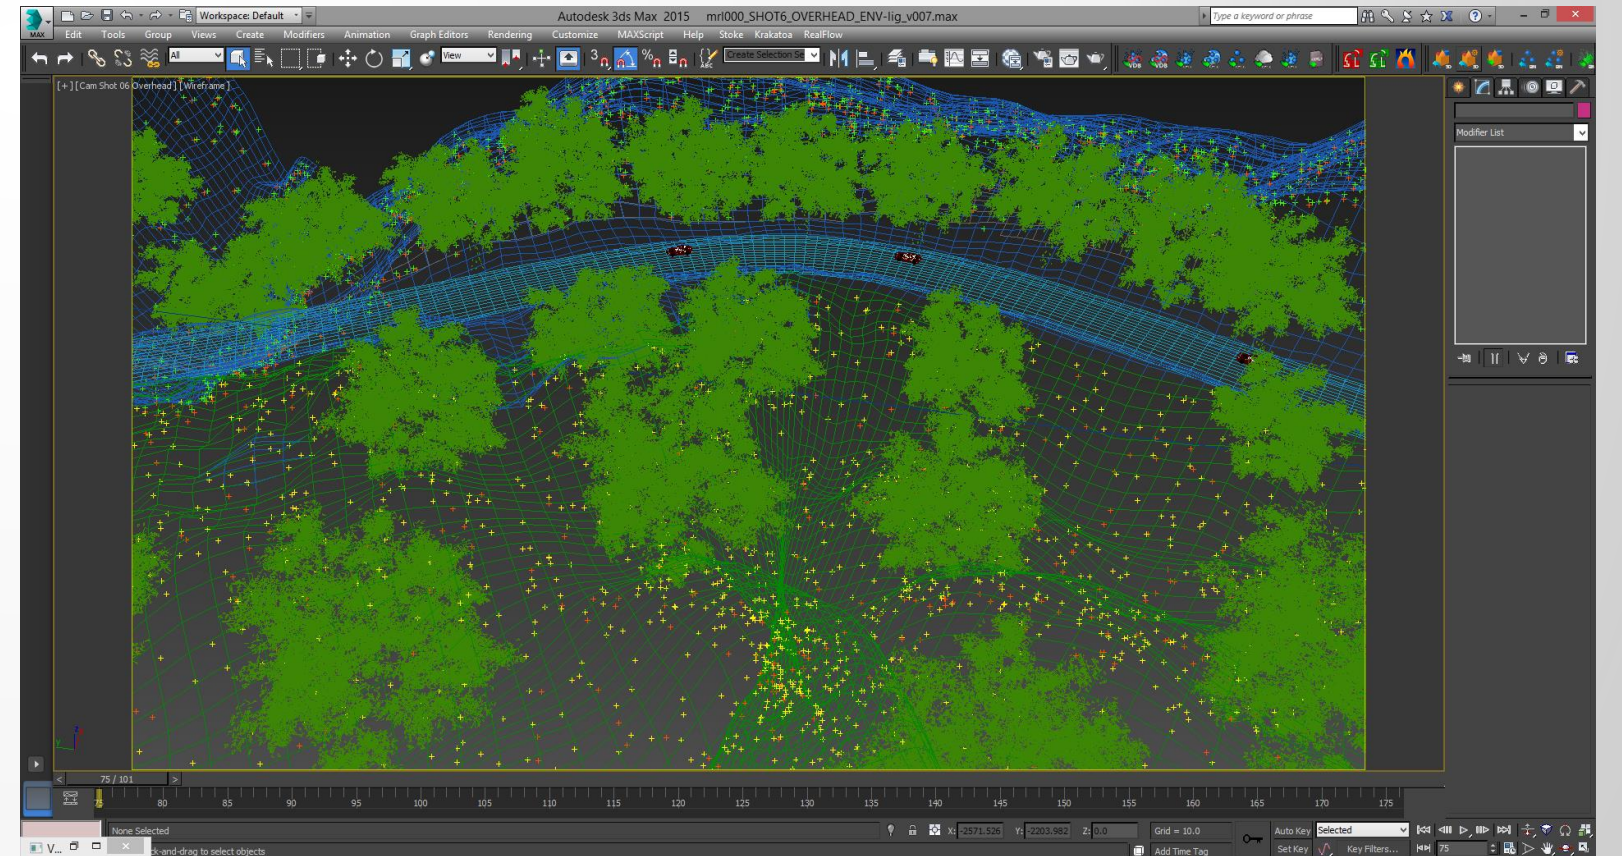

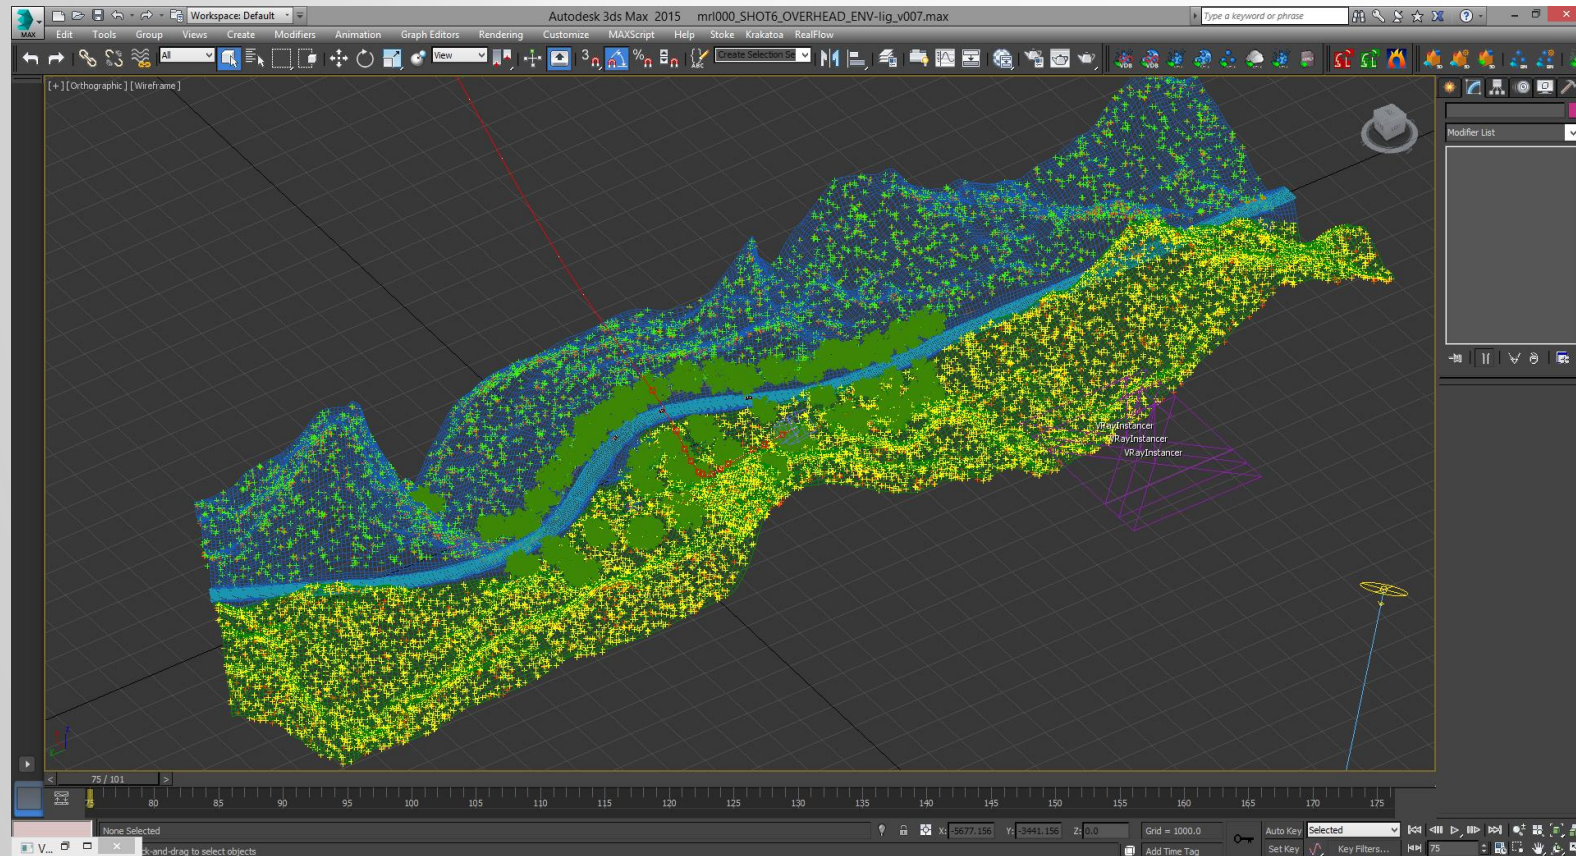

# Aerial View Foliage

# Forest Canopy Without Using All Tree Models

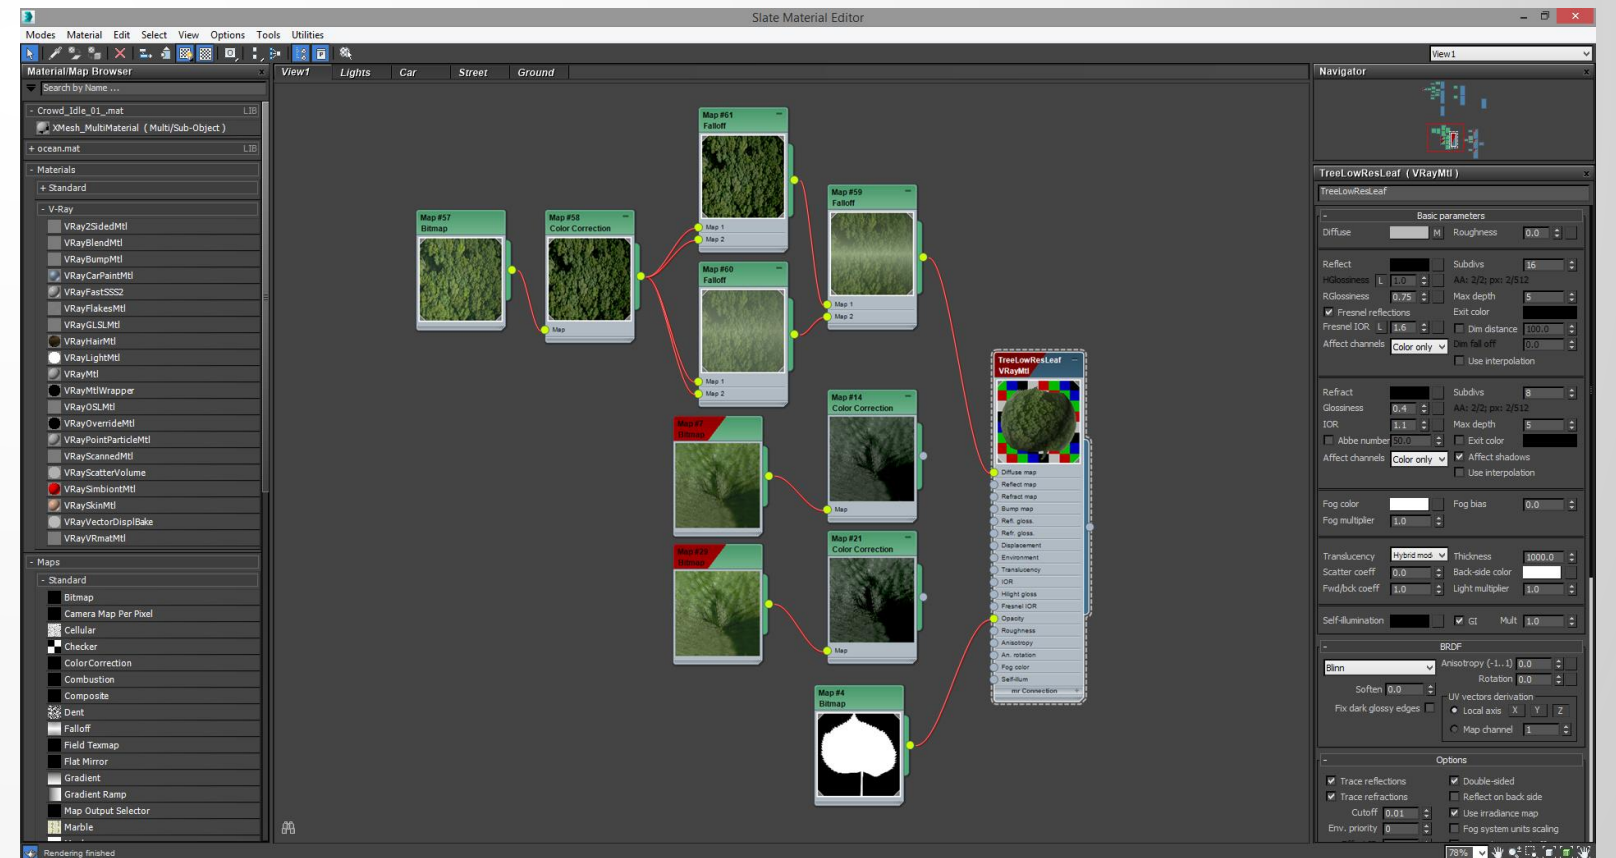

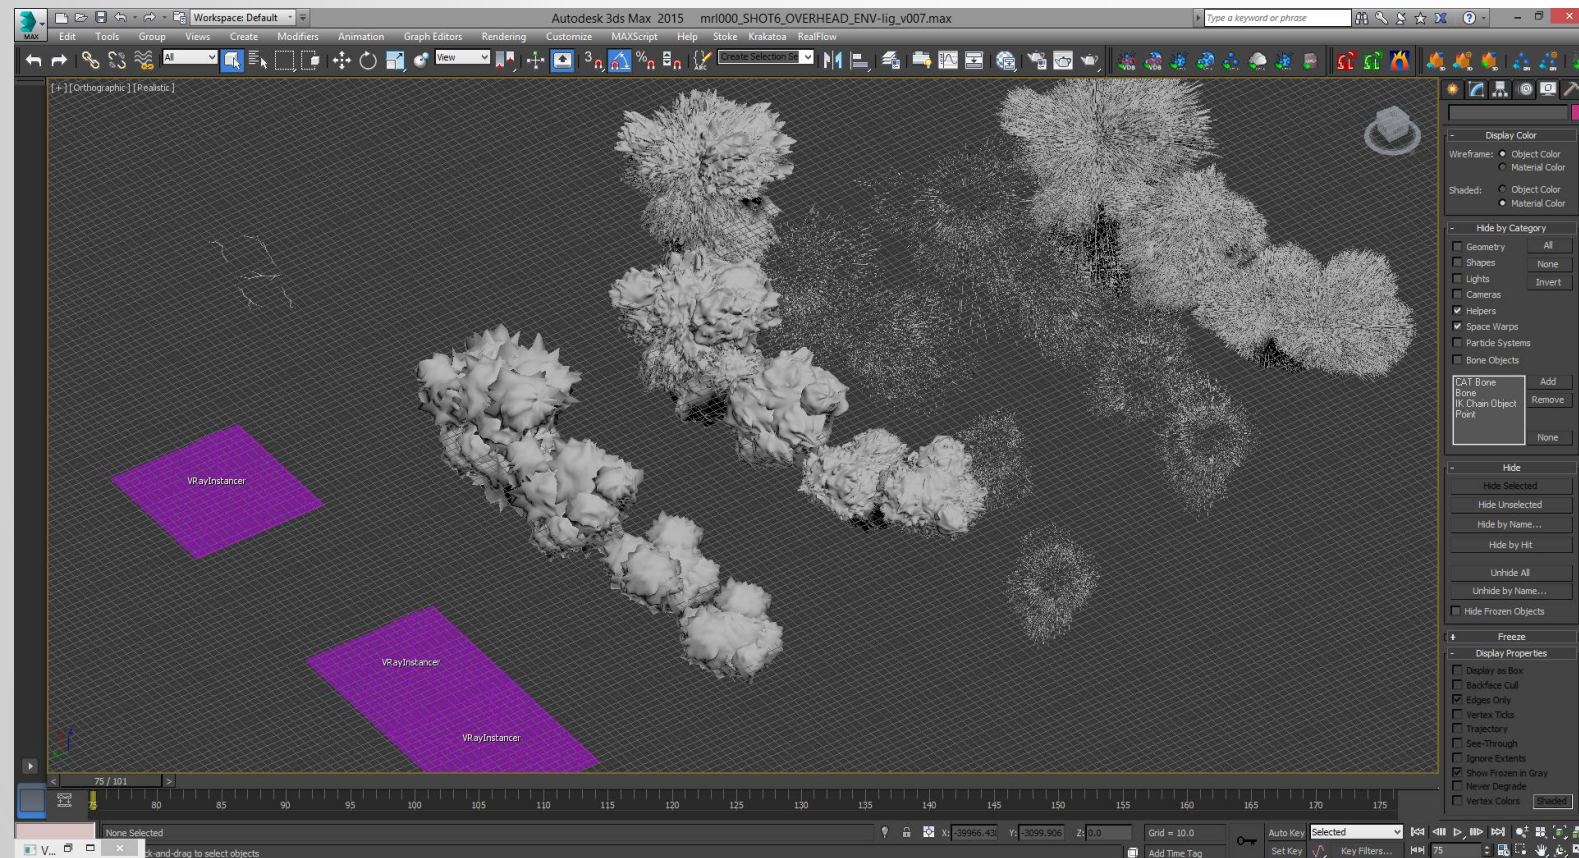

- Good for shots High Altitude Wide Aerial Shots
- Lighter to work with and render than full tree models
- Uses Vray Proxies and Vray Instancer with Pflow

# Forest Canopy Without Using All Tree Models

- Spheres with Displacement modifier
- Use nested Falloff maps in material

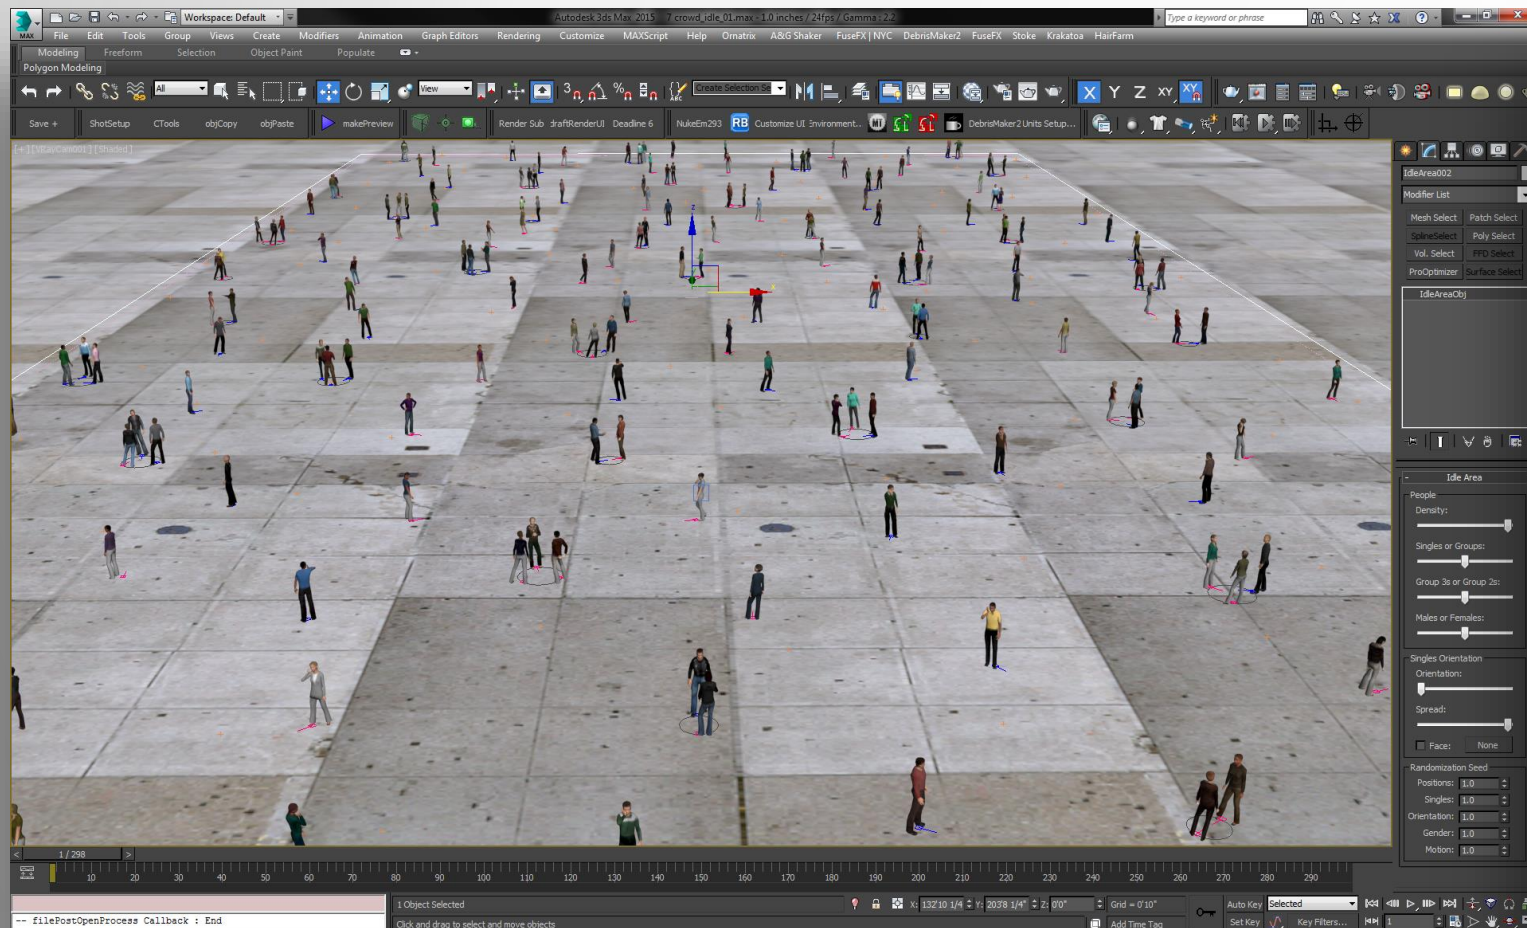

# Efficient Large Crowds

# Efficient Distribution of Populate Assets

- Good for shots needing generic non-hero idle crowds
- Bypasses crowd-density/area limitations of Populate
- Expands crowd distribution options

# Efficient Large Crowds

## Workflow Overview

- Create generic idle crowd with Populate
- Create Cache of all crowd objects to 1 proxy file with Xmesh
- Repeat as necessary for more varied crowd
- Setup Pflow crowd distribution system
- Create and setup Vray Instancer

# Miscellaneous Production Tips and Tricks

# Topics Covered

We will be examining the following:

- Quick HDRI config for use with Vray
- Using particles for quicker Turbulence/Noise visualization
- Creating Looping Geometry Caches
- Show Trajectories Toggle
- Render EXR whenever possible for sweetening in comp
- Avoiding Viewport Performance Hits

# Quick HDRI configuration with Vray Dome Light

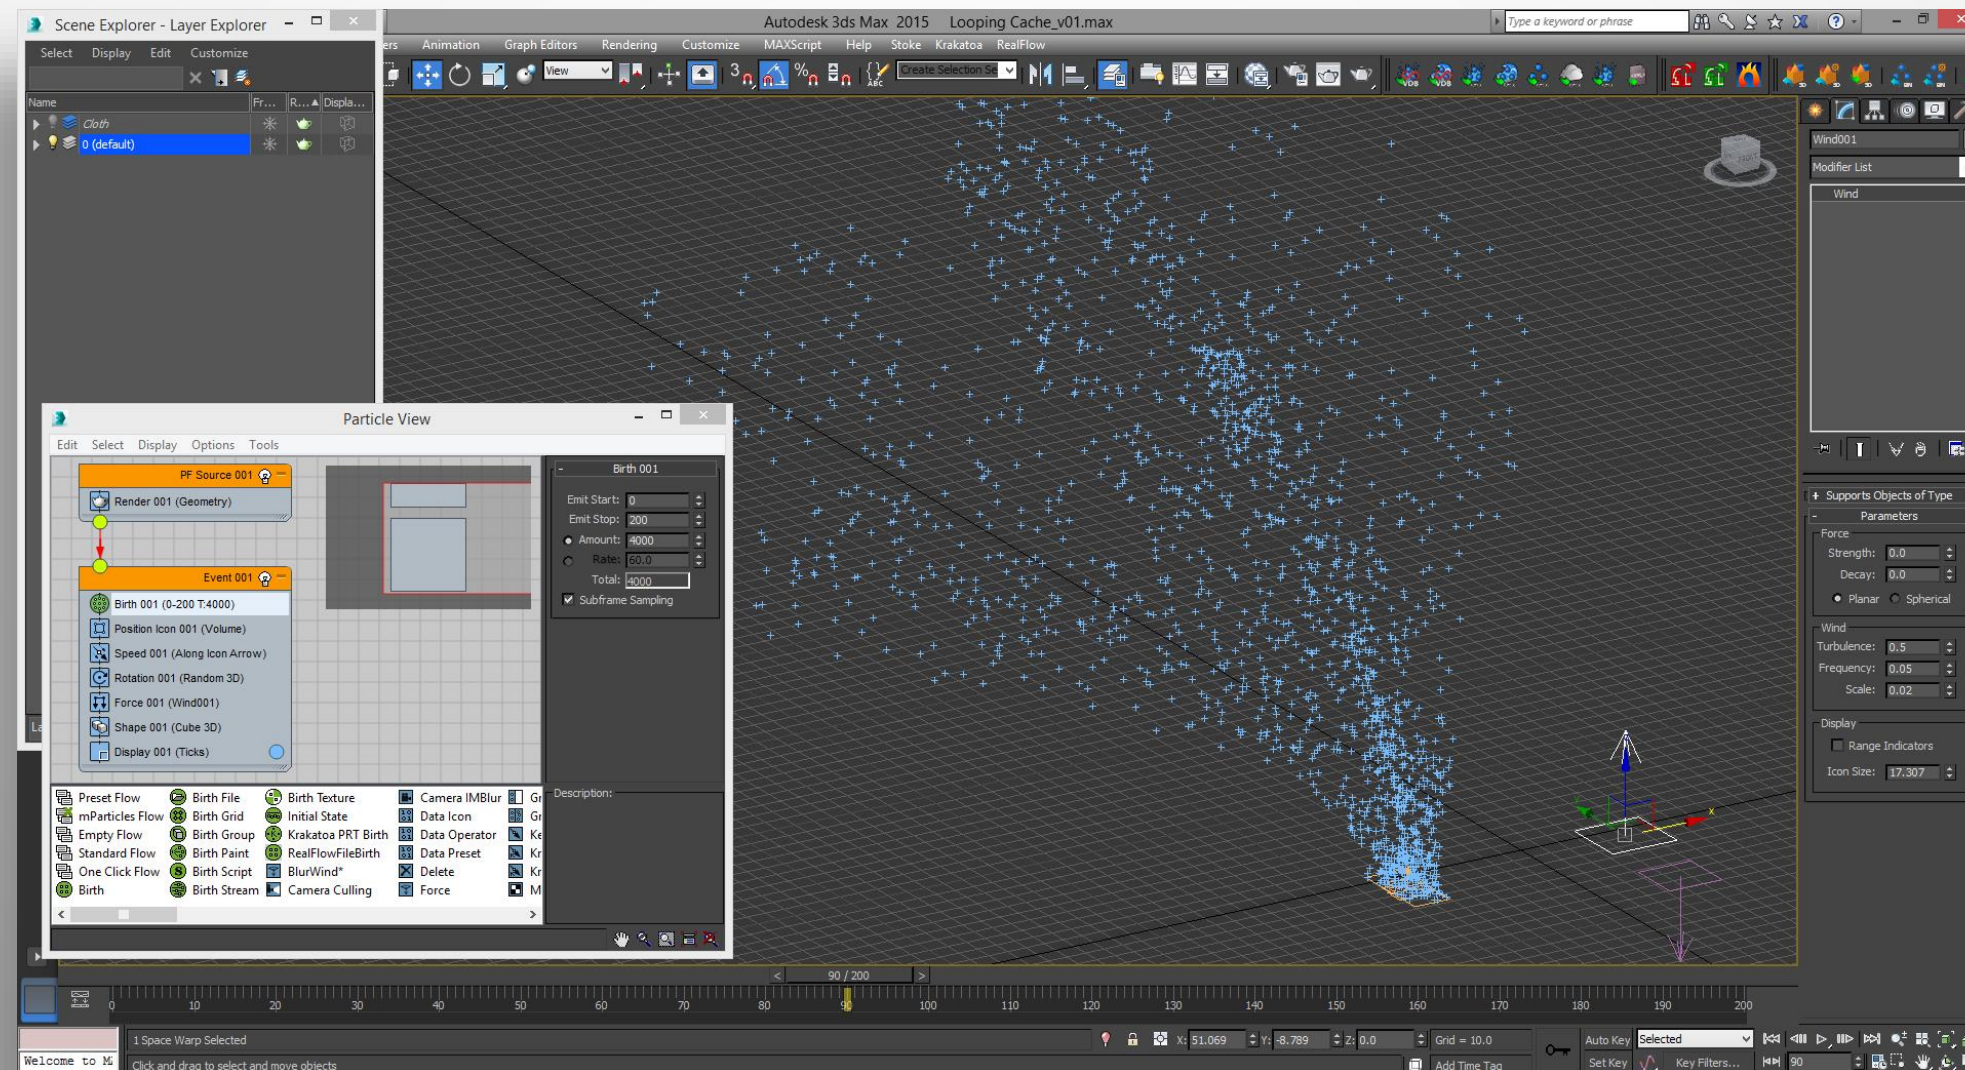

- Use sphere with fully reflective shader
- Goal is to maintain a 1x multiplier in the dome light
- Sphere used to gauge processing multipliers in HDRI map controls

# Use Particles to Visualize Noise/Turbulence Faster

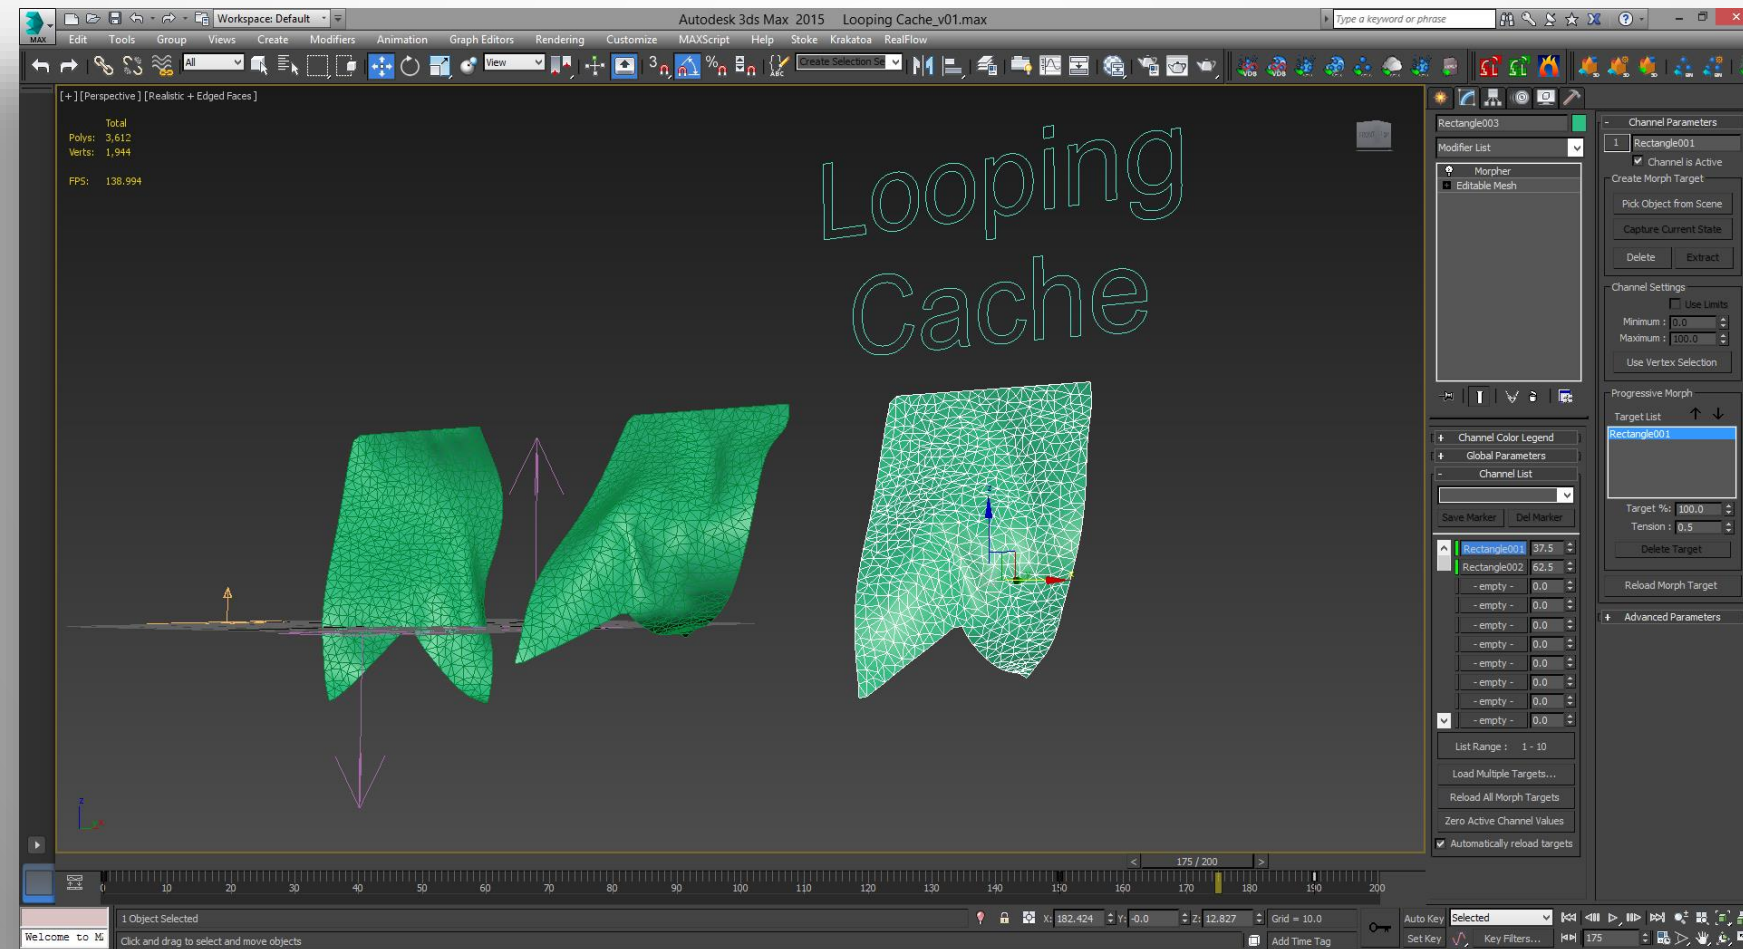

- When creating Foliage or Cloth blowing in wind/turbulence
- Faster to use a particle system to visualize noise/turbulence patterns
- Then apply to Cloth or Flex simulation and adjust strength

# Looping Geometry Caches

- After calculating Cloth or Flex simulation
- Cache resulting animation to disk
- Make a clone and offset playback timings
- Use Morpher to create loop
- Cache resulting loop animation to disk

# Benefits and General Workflows with Open EXR

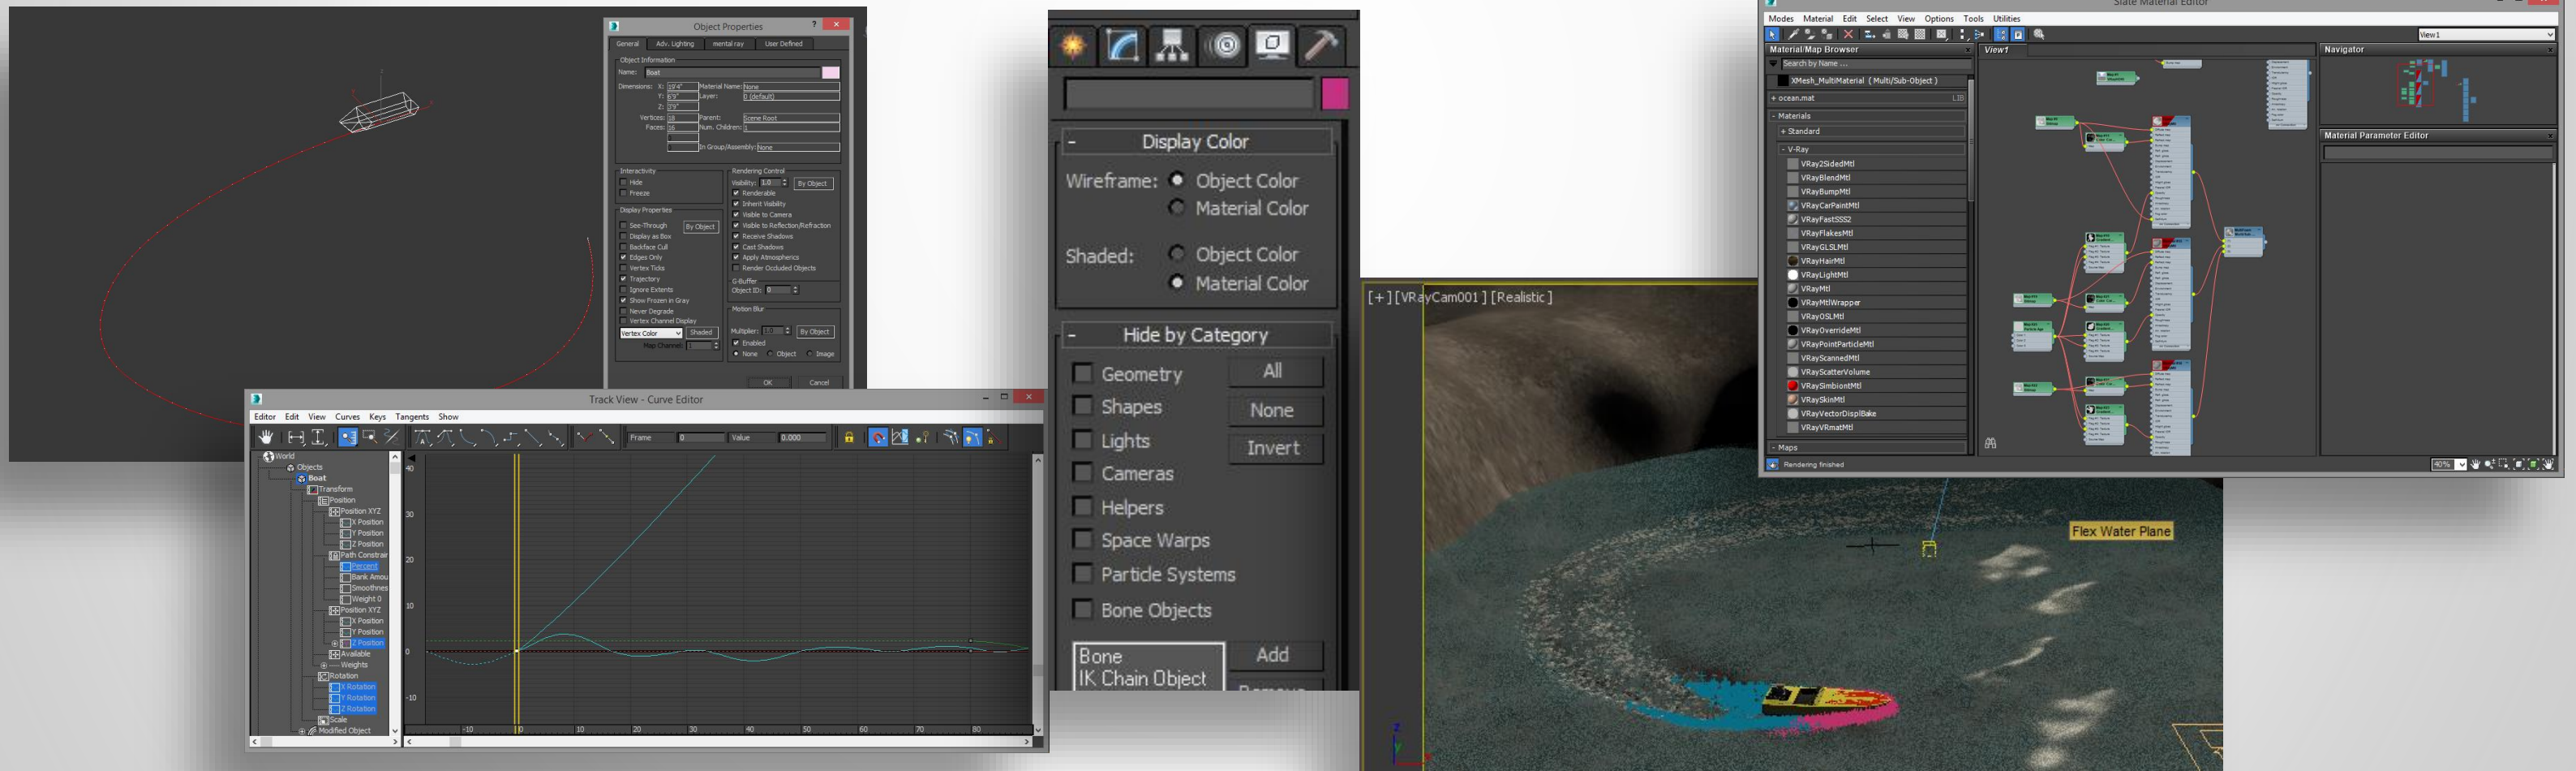

- MultiMatte
- Light Select
- Velocity
- SamplerInfo
  - Point
  - UVW

# Avoiding 3ds Max viewport performance hits

- Displaying object trajectories
- Having Track View open
- Having Display Tab of Command Column Selected/Visible
- Realistic viewport mode
- Material Editor open during playback

# Forget to take notes? No problem!

After AU visit:

**AutodeskUniversity.com**

Click on **My AU** to find:

- Class Recordings
- Presentations
- Handouts

All of your sessions will be there to enjoy again and again.

# Too many sessions, too little time?

After AU visit:

**[AutodeskUniversity.com](http://AutodeskUniversity.com)**

- Recorded sessions
- Presentations and handouts
- Key learnings

Don't miss a second! Find hundreds of sessions waiting for you.

# More Questions? Visit the AU Answer Bar

- Seek answers to all of your technical product questions by visiting the **Answer Bar**.
- Open daily 8am-10am and Noon-6pm and located just outside of Hall C on Level 2.
- Staffed by Autodesk developers, QA, & support engineers ready to help you through your most challenging technical questions.
