

Is It Going to Look Like That? Using Storyboarding & Previsualization Before Final Rendering

Chip Weatherman

3D Visualization Team Lead

@chipnuts

Class summary

This class covers how to use storyboarding and previsualization tools to help convey ideas before final rendering. We show you some successful and not-so-successful examples.

Key learning objectives

At the end of this class, you will be able to:

- Work with other teams (e.g. Engineers, architects) to first come up with a story.
- Start mocking up quick storyboards or non-rendered previsualization scenes.
- Communicate with other teams the story you are presenting through your storyboards or previsualizations (and be prepared for changes).
- Incorporate all the previous information you received into your final renderings to avoid having to re-render from unexpected changes.

Introduction

Introduction

- What is Storyboarding?
- How can it be used in visualization?
- Seriously, how can it be used in visualization?
- How have YOU used it in visualization?

Working with other teams to
develop your 'story'

Working with other teams to develop your 'story'

The WHO

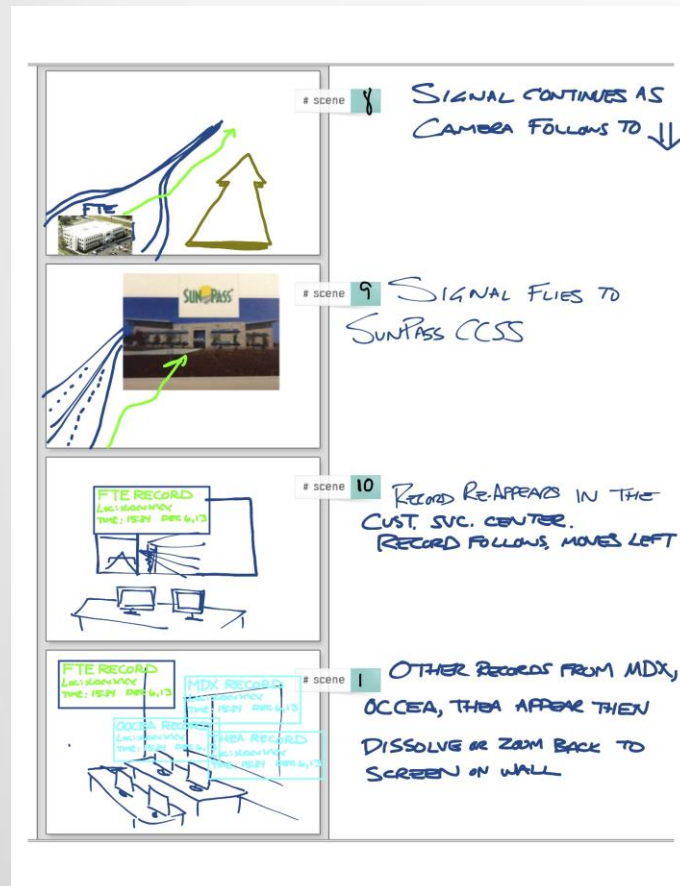

- FTE Toll
- City of LA 6th St Bridge

Working with other teams to develop your 'story'

The WHAT

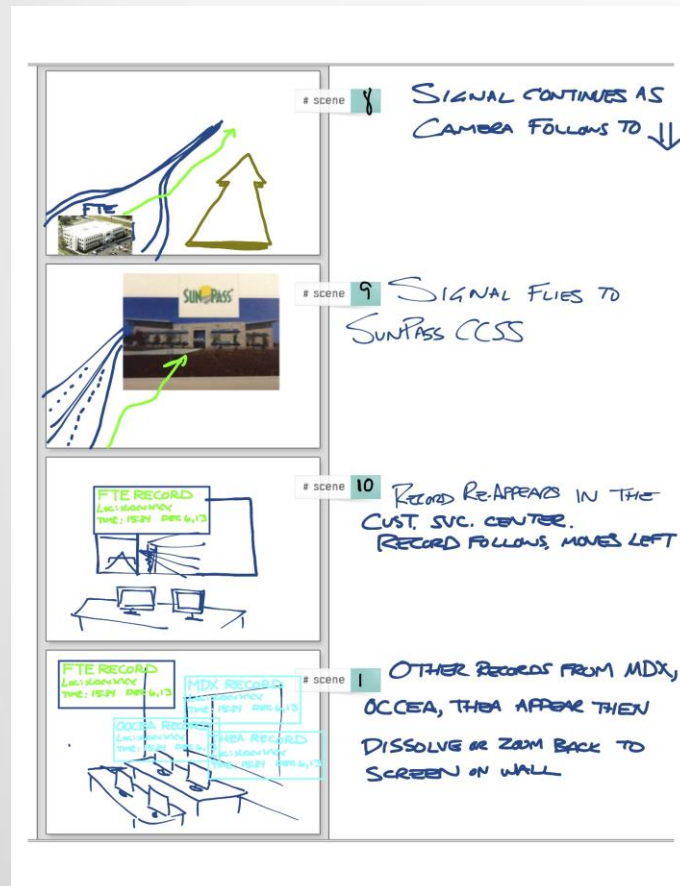

- FTE was more processed oriented
- City of LA was more visual oriented

Working with other teams to develop your 'story'

The WHY

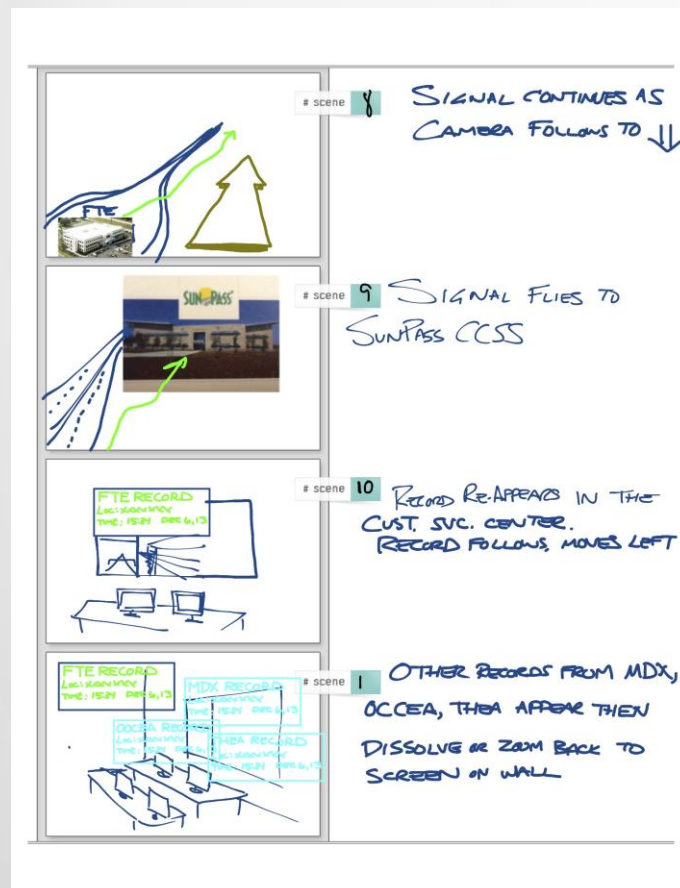

- FTE needed consistent, fast, and efficient way to collect tolls
- City of LA needed a new bridge

Working with other teams to develop your 'story'

The HOW

- FTE we showed HOW it would work
- City of LA we showed HOW it was going to affect surrounding areas

Start mocking up quick storyboards or non-rendered previz scenes

Start mocking up quick storyboards or non-rendered previz scenes

- What to do after you've answered those questions
 - FTE needed more graphical representations
 - City of LA needed high-end visualization

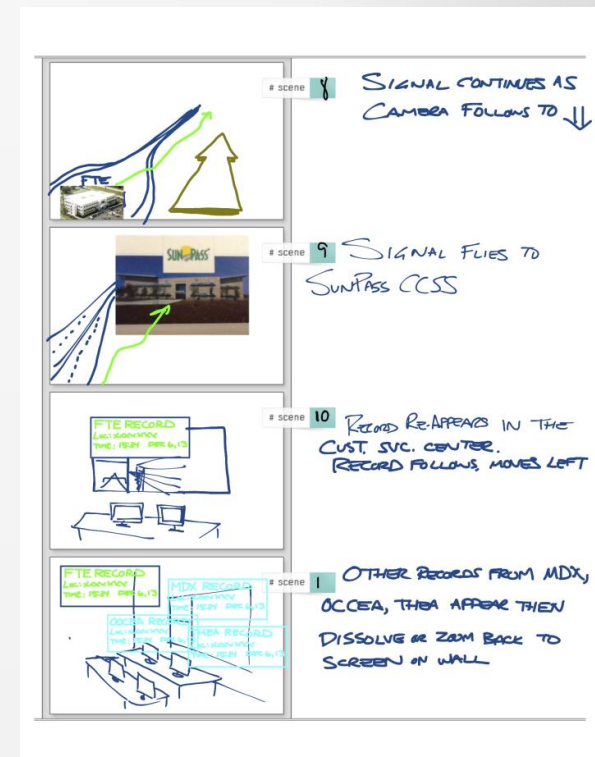

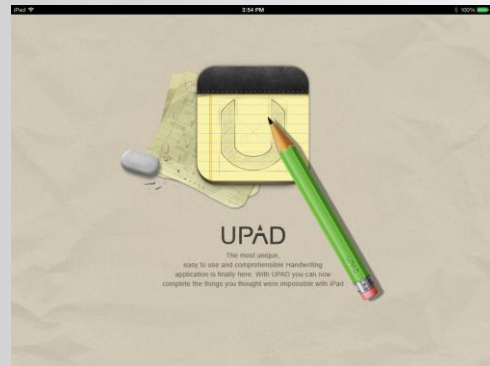

Start mocking up quick storyboards or non-rendered previz scenes

- Gather what you can from engineers or architects
 - FTE had pictures of Toll HQ, Gantry, and typical roads
 - City of LA had bridge photos, some history, surrounding buildings, etc.

Start mocking up quick storyboards or non-rendered previz scenes

- Take stock in available data and create what you can with the tools you have
 - FTE storyboard ideas, bullet point list, but no geo data, specific areas, etc.
 - City of LA we had YouTube videos, bought LA Noire, Google street view, Bing, etc.

Start mocking up quick storyboards or non-rendered previz scenes

- Fill in the blanks and refine if necessary
 - Determine main point of contact
 - Take note of holes and errors in order to explain.

Communicate with other teams the story you are presenting through your storyboards

Communicate with other teams the story you are presenting through your storyboards

- Send on the first draft
 - Only to people that need it. Not everyone.
 - Make sure they know which 'errors' to ignore.
- Don't rest while waiting on feedback
 - Use every part of the buffalo.
 - If there's nothing project specific research a new workflow, plugin, etc.
- Is it going to look like that?!
 - May have to walk through storyboard with previz.
 - Repeat business means less of that question.
- If possible send some examples of final quality
- Rinse and Repeat as necessary

Incorporate all the previous information

Incorporate all the previous information

- Manage expectations
 - FTE was overnight renders.
 - 6th St was a couple days.
- What's next?
 - Final compositions should be ready for final footage.
 - Determine final deliverable and make sure it works.

Final Thoughts

Final Thoughts

- Sometimes things don't work out.
 - FTE needed time cut off.
 - 6th St was drawn out, many position changes, scope changed, etc.
- In the trenches
 - FTE it was an easy change.
 - We had a great model to just drop everything into.
- Storyboards FTW!
 - FTE was easy fix because we had storyboarded it out
 - Even in the chaos of a project, we got a single storyboard to rule them all!

Final Thoughts

- Be prepared!
 - ...for it to possibly shrink or grow.
 - ...to lose your favorite shot.
 - ...to fill in the blanks.
 - ...for a bit of initial pushback (particularly early on)
- Stay on target
 - Maintain single story concept from start to finish.
 - Get what you can before abandoning if needed.

Thanks!

And don't forget to provide class
feedback!
